Aelbert Cuyp
Edited by Arthur K. Wheelock Jr.

Aelbert Cuyp
Shell Oil Company Foundation, on behalf of the employees of Shell Oil Company, is proud to make possible this presentation to the American people.

The exhibition is organized by the National Gallery of Art, Washington, in cooperation with the National Gallery, London, and the Rijksmuseum, Amsterdam. The exhibition in Washington is supported by an indemnity from the Federal Council on the Arts and the Humanities.

This book is published in association with the exhibition Aelbert Cuyp.

Exhibition dates
National Gallery of Art, Washington
7 October 2001 – 13 January 2002

National Gallery, London
13 February – 12 May 2002

Rijksmuseum, Amsterdam
7 June – 1 September 2002

Note to the Reader

The painting entries are written by Alan Chong (AC), Axel Rüger (AR), and Arthur K. Wheelock Jr. (AKW).

The drawing entries, written by Wouter Kloek (WK), are based on material generously supplied by Egbert Haverkamp-Begemann, which incorporates the pioneering work of the late Jan van Gelder and his wife Ingrid van Gelder-Jost.

Dimensions are cited in centimeters, followed by inches in parentheses.
Aelbert Cuyp (1620–1691) was a visual poet. His light-filled depictions of the Dutch landscape — views of shepherds and herds of cattle resting in verdant pastures, travelers wending past picturesque ruins, or stately sailing ships anchored on the inland waterways near his native Dordrecht — have entranced viewers ever since the seventeenth century. Not only did he draw the inspiration for his images from the land itself, for he made numerous drawings, both refined and expressive, documenting motifs he found in nature, but he also turned to Dutch literary and pictorial traditions that celebrated arcadian ideals.

Despite his fame, the magnitude of Cuyp’s creative achievement has never been fully understood. Until now, no international loan exhibition has ever brought together a full range of his paintings and drawings. But with this exhibition, a careful selection of Cuyp’s works surveys the breadth of this remarkable artist’s achievement and provides an overview of his career, from his early drawings of the late 1630s to the fully realized paintings he created in the 1660s.

The exhibition and catalogue are the result of a close collaboration between the National Gallery of Art, Washington, the National Gallery, London, and the Rijksmuseum, Amsterdam. Arthur K. Wheelock Jr., curator of northern baroque painting at the National Gallery of Art, Axel Rüger, curator of Dutch paintings at the National Gallery, London, and Wouter Kloek, curator at the Rijksmuseum, all contributed to the catalogue and guided the project at their respective institutions.

The catalogue, which benefits from the contributions of a number of scholars, contains essays that help expand our understanding of Cuyp’s work and its historical significance. Arthur Wheelock, with contributions from Jacob de Groot, provides an overview of Cuyp’s artistic career, paying special attention to the historical, literary, and pictorial ideals that underlie Cuyp’s distinctive choice of subject matter and manner of painting; Alan Chong discusses Cuyp’s patrons and the history of Cuyp’s artistic reputation; Emilia Gordenker examines the costumes in Cuyp’s paintings; Marika Spring writes about the pigments and materials Cuyp used; and Egbert Haverkamp-Begemann surveys Cuyp’s drawings, describing their distinctive character and their place in Dutch art.

Aelbert Cuyp is made possible in Washington by the enthusiastic support of Shell Oil Company Foundation. We owe particular thanks to Steven Miller, chairman, president, and chief executive officer of Shell Oil Company, for Shell’s ongoing commitment to the National Gallery of Art. Indeed, Shell has sponsored a range of exhibitions at the Gallery over the course of fifteen years: with Aelbert Cuyp, we celebrate the fifth exhibition of Dutch art to benefit from Shell’s support. The exhibition in Washington is also supported by an indemnity from the Federal Council on the Arts and the Humanities. In London, Océ N.V.’s longstanding support for the National Gallery has been extended by their generous agreement to sponsor the exhibition. In Amsterdam, we owe many thanks to Royal Philips Electronics, founder of the New Rijksmuseum, who made the exhibition and catalogue possible there with their generous support. Together, the Rijksmuseum and Philips, two Dutch multinational partners, look forward to presenting in the near future impressive exhibitions at the renovated national museum in Amsterdam.

Acknowledgments

This exhibition has been a shared enterprise between the National Gallery of Art, Washington, the National Gallery, London, and the Rijksmuseum, Amsterdam. The enthusiasm of my colleagues from these institutions, particularly Axel Rüger at the National Gallery and Wouter Kloek at the Rijksmuseum, has greatly enhanced the character of the exhibition. These colleagues also share with me enormous appreciation for the many contributions of other experts on the artist, in particular Alan Chong, Norma Jean Calderwood Curator of the Collection, Isabella Stewart Gardner Museum, Boston, and Egbert Haverkamp-Begemann, professor emeritus, New York University, both of whom helped advise on the selection of the works. Chong’s 1992 dissertation on Cuyp, which is the standard work on the artist’s paintings, served as the basis for many of the observations and much of the provenance information contained in this catalogue. Professor Haverkamp-Begemann, who is preparing a book on Cuyp’s drawings, generously shared the unpublished manuscript with Wouter Kloek for his use in writing the entries on the drawings in this catalogue. This manuscript, which also includes information about the provenances of the drawings, is, in itself, indebted to the extensive research on Cuyp’s drawings undertaken in the 1960s by Jan van Gelder and his wife Ingrid van Gelder-Jost.

Each of us would like to extend our deepest gratitude to the many institutions and private collectors that have generously lent their precious works to this celebration of Aelbert Cuyp’s artistic genius. The enthusiasm with which this project has been greeted has meant that the exhibition includes many of Cuyp’s finest paintings and drawings, works that demonstrate both the extraordinary quality and surprising range of his subject matter. Many of the drawings, moreover, relate specifically to the paintings, thus revealing much about Cuyp’s working methods.

Among the many colleagues who kindly advised or assisted on various aspects of the exhibition, I would particularly like to acknowledge Frits Duparc for his important role in the genesis of the show: it was he who first suggested to me that an Aelbert Cuyp exhibition would be a fascinating and fruitful project. Another individual who helped guide me in the beginning stages of this project was Peter Schatborn, who spent many hours with me looking at the remarkable collection of Cuyp drawings in the Rijksprentenkabinet in Amsterdam. My initial discussion about sharing the exhibition with the National Gallery, London, was with Christopher Brown, formerly chief curator at that institution. In planning this exhibition, I also had extremely useful discussions with Jacob de Groot, former director of the Dordrechts Museum and a contributor to this catalogue.

Numerous other colleagues have assisted and advised us on this project, or have supported our requests for loans of valuable and fragile works of art; we thank Ronni Baer, Suzanne Benfield, Martin Bijl, María van Berge-Gerbaud, Holm Bevers, Peter and Hilde de Boer, Julius Bryant, Emanuelle Brugerolles, Edwin Buijsen, Jill Capobianco, Michael Clarke, Laura Coyle, Anthony Crichton-Stuart, Marguerite Glass, Diane De Grazia, Ian Dejardin, Frederik J. Duparc, Ilidikó Ember, Jan Piet Filedt Kok, Jeroen Giltaij, Dare Hartwell, Jo Hedley, Guido Jansen, Lorraine Karasel, Ronda Kasl, Alison McNeil Kettering, Fritz Koreny, Alastair Laing, Friso Lammertse, Catherine Levesque, Walter Liedtke, Richard Lingner, Christopher Lloyd, Julia Lloyd Williams, John Loughman, Michael Maek-Gerard, Ekkehard Mai, Volker Manuth, Patrice Marandel, Bram Meij, Norbert Middelkoop, Miklós Mojer, Otto Naumann, Larry Nichols, Robert Noortman, Gill Pessach, Michiel Plomp, Willem de Ridder, Ned Rifkin, Bill Robinson, Martin Royalton-Kisch, Francis
Russell, Marijn Schapelhouman, Peter Schoon, Desmond Shawe-Taylor, Anthony Speelman, Margret Stuffmann, Peter Sutton, C. van Tuyl van Serooskerken, Sarah Walden, Lavinia Wellicome, Adele de Werff Stevens, Marieke de Winkel, James A. Welu, and Eric Zafran. Finally, we are indebted to Jennifer Kilian and Katy Kist for their excellent translations of the Dutch text into English.

We would also like to acknowledge the importance of various centers for scholarly research, whose staff and resources were essential to the success of our project, including the British Library, London; the National Art Library, London; the National Gallery Library, London; the Frick Art Reference Library, New York; the National Gallery of Art Library, Washington; and the Netherlands Institute for Art History, The Hague.

In each of the three participating institutions many individuals worked tirelessly to ensure the exhibition’s success. We thank our colleagues at the National Gallery in London and at the Rijksmuseum in Amsterdam.

In Washington, Carol Christensen skillfully conserved the four paintings in the exhibition from the National Gallery of Art’s collection, recapturing pictorial subtleties that had been diminished because of old, discolored varnish. Melanie Gifford and Michael Palmer undertook scientific examinations of these paintings that helped answer intriguing questions about Cuyp’s painting techniques. Richard Ford ably constructed a number of frames for paintings to enhance their appearance, while Hugh Phibbs helped frame a large number of the drawings.

D. Dodge Thompson, Ann Bigley Robertson, and Jennifer Bumba-Kongo in the department of exhibitions handled the organization of the exhibition and administration of the loan requests. In the department of imaging and visual services, Sara Sanders-Buell gathered color transparencies from lenders. In the registrar’s office Michelle Fondas and Sally Freitag coordinated the transportation of the works of art, while Mervin Richard of the department of loans and exhibitions conservation supervised the packing and safe transport of the panel paintings. Mark Leithauser, and his outstanding department of installation and design, developed the handsome installation of the exhibition. Finally, many people in the editors office contributed to the production of this catalogue: Judy Metro and Tam Curry Bryfogle supervised the project; Julie Warnement, with great care and patience, worked with the various authors to prepare and edit the manuscripts; and Wendy Schleicher Smith created its especially elegant design.

Finally, to the staff of the department of northern baroque painting at the National Gallery of Art, I am extremely grateful. Quint Gregory and Phoebe Avery helped develop the exhibition concept. Anna Tummers offered a number of keen insights on Cuyp and his paintings, and oversaw many of the complexities presented by this show. Aneta Georgievskaya-Shine helped prepare the bibliography for the catalogue. Michelle Naimo Bird, our staff assistant, diligently handled the many administrative demands connected with this project.

To all of those who have helped bring our project to its successful conclusion, we extend our deepest gratitude.

Arthur K. Wheelock Jr.
The Netherlands that Aelbert Cuyp portrayed was a peaceful world, a verdant, sun-filled arcadia blessed with gentle breezes and billowing clouds. Shepherds tend herds of cattle and sheep graze contentedly in pastoral landscapes, travelers wend their way along well-beaten paths to enjoy beautiful vistas and marvel at picturesque ruins, and sailing ships find steady winds to guide them along inland waterways. Farm buildings, protectively nestled amongst stands of tall, gracefully bending trees, and well-maintained fences and footbridges indicate the harmonious coexistence of man and nature in the young Dutch Republic. Even in Cuyp's rare depictions of contemporary events, such as the massing of the Dutch fleet near his native Dordrecht (cat. 28), nature complements the drama of the unfolding scene: the great ships are visually joined to the imposing cloud formations and enhanced by sunlight streaming across the expansive sky.

Aelbert Cuyp is one of the Netherlands' greatest artists, a visual poet whose idyllic scenes of the Dutch countryside have entranced collectors and connoisseurs ever since the seventeenth century. The appeal of his paintings and drawings, however, lies not only in their subject matter but also in their distinctive style, for Cuyp infused his arcadian subjects and river views with a sensitivity to light, color, and clarity of form that is firmly grounded in reality. Despite Cuyp's substantial fame, surprisingly little is known about the specifics of the artist's career or the motivations that drove his distinctive approach to the representation of nature. These concerns, however, can be addressed by tracing the broad evolution of the artist's life and career — from his early, monochromatic depictions of the native Dutch landscape to his later, light-filled pastoral scenes — and by examining his work in relation to broader intellectual and artistic currents within the Dutch Republic, primarily contemporary ideals of arcadia and the golden age.

Cuyp spent his entire artistic career in Dordrecht. Though not an important artistic center, it was a wealthy city proud of its heritage as the oldest city in Holland (fig. 1). Joan Blaeu, in his topographic atlas of Dutch cities of 1649, described Dordrecht as "the principal [city], and the capital of Holland: therefore some call it Mother and Queen of the cities in this lovely landscape." John Ray, an English traveler who visited the Netherlands in the late 1660s, remarked that the elegantly paved streets of this large, well-built city were so clean "that a man may walk them in Slippers without wetting his foot in the midst of Winter." Dordrecht's mercantile importance largely resulted from its favorable geographic situation at the confluence of a number of major inland waterways, including the Rhine, the Maas, and the Merwede (fig. 2). From this location ships could easily sail to Rotterdam and the North Sea, or inland to Nijmegen and beyond. As an old, established city, Dordrecht had important economic advantages, among them the privilege of staple...
right (gained in 1299), whereby shipments of wine, grain, wood, and certain other goods were unloaded in Dordrecht and assessed for duties before being allowed to travel further.\(^5\)

While its well-protected inner harbor was lined with stately homes, Dordrecht’s distinctive skyline was best viewed from the Maas or from the villages of Papendrecht or Zwijndrecht, which were situated on the far banks of this broad and busy river. From these vantage points, one could admire both the elegant Groothoofdsport, the city’s major port of entry, and the massive Grote Kerk, the city’s real and symbolic center of power. Indeed, the formidable presence of the Dutch Reformed Church in the city was instrumental in its being chosen for the site of the important Synod of Dordrecht in 1618 – 1619. This synod codified Reformed Church worship and instigated the translation of the Bible into the Dutch language (the Statenbijbel was published in 1637). The Synod of Dordrecht was also historically important for siding with the Counter-Remonstrants, who preached predestination, rather than with the Remonstrants, who believed in free will as a means to achieve grace.\(^6\)

The results of the Synod of Dordrecht reinforced the conservative character of Dordrecht’s rich patrician class. Aelbert Jacobsz Cuyp, who was baptized in the Reformed Church in October 1620, must have fit comfortably within this ambiance as he grew and matured as a painter in his native city.\(^7\) His father, the painter Jacob Gerritsz Cuyp (1594 – 1652), numbered several wealthy Dordrecht patrician families among his patrons and served as a deacon in the Walloon, or French-speaking Reformed Church.\(^8\) Jacob had joined this church in 1618, shortly after his marriage to Aertken Cornelisdr van Cooten, and seems to have raised his son to value religion and to live an upright life. Arnold Houbraken, a native of Dordrecht, noted in his early eighteenth-century commentary on the artist that Aelbert was a man of onbesproken leven (irreproachable character).\(^9\)

When Aelbert eventually married at the age of thirty-eight, he chose as his wife Cornelia Boschman (1617 – 1689), the widow of a wealthy Dordrecht regent, Johan van den Corput (1609 – 1650).\(^10\) Cornelia, who had three children from her previous marriage, was the granddaughter of Franciscus Gomarus, a Leiden theologian who had led the Counter-Remonstrants at the Synod of Dordrecht.\(^11\) During his later life, Aelbert became extremely active in religious and social activities, serving as a deacon and elder of the Reformed Church, a regent of a major charity associated with the Grote Kerk (Heilig Geest-en Peesthuis der Grote Kerk), and a member of the tribunal of Zuid Holland.\(^12\) Both his marriage and his life pursuits proved financially rewarding, for at his death in November 1691, he was one of the wealthiest men in Dordrecht.

Houbraken, whose sparse account is the earliest commentary on the artist’s life and work, related that Aelbert received his basic artistic training from his father.\(^13\) Although nothing more is known about the nature of his training, Aelbert was certainly raised in an artistic ambiance. His grandfather Gerrit Gerritsz Cuyp (c. 1565 – 1644) was Dordrecht’s most important glass painter. His uncle, Jacob Gerritsz Cuyp’s half brother, was Benjamin Gerritsz Cuyp (1612 – 1652), a prolific painter of religious subjects and peasant and inn scenes, which he executed in a distinctively expressive, monochromatic style.\(^14\) By the early-to-mid 1630s, when Aelbert probably entered his father’s workshop, Jacob had developed a successful career as a specialist in portraiture, although he was also known for his depictions of animals (see cat. 2, fig. 1).\(^15\) Jacob occasionally combined these two interests in his pastoral portraits, a genre that he probably learned from his teacher, the famed Utrecht artist...
and teacher Abraham Bloemaert (1564–1651), or from Bloemaert’s colleague Paulus Moreelse (1571–1638). These delightful pastoral portraits focused upon aristocratic patrons, often women and children in the guise of shepherds or shepherdesses, situated within a landscape setting (fig. 3).

Jacob Cuyp’s pastoral portraits reflect attitudes found in contemporary literature that eulogized a serene, idyllic life in the country, where the human spirit could be refreshed and gladdened. Although these portraits were generally painted for aristocratic patrons, the ideals underlying such pastoral imagery were broadly shared in Dutch society during the early years of the seventeenth century. Indeed, religious traditions, sociological developments, and political circumstances had coalesced to reinforce a widely held belief that the newly formed Dutch Republic was entering into a golden age, one guided and protected by the munificence of God’s blessing. The character of this belief held important implications for Cuyp’s artistic approach.

Seventeenth-Century Views of the Golden Age and the Dutch Arcadia

Today, when we use the term the golden age to describe the Dutch Republic in the seventeenth century, we refer not only to the extraordinary achievements of its artists, poets, playwrights, and scientists, but also to its admirable political structure, tolerant attitudes toward different religious sects, maritime fleet, economic power, and prosperous way of life. But even before all of this came to pass, before Aelbert Cuyp first picked up his brushes, the concepts of a Dutch arcadia and golden age had already entered into the popular consciousness of the Dutch.

Jacob Cuyp’s pastoral portraits were only one facet of this popular fascination with these concepts. Comparable attitudes also underlay the positive view of the Netherlands presented by artists who portrayed the specific characteristics of the Dutch countryside. The most significant of these images can be found in a series of landscape prints that were published in Haarlem and Amsterdam by Esaias van de Velde (1587–1630), Jan van de Velde (1593–1641), Claes Jansz Visscher (1587–1652), and Willem Buytewech (1591/1592–1624) in the second decade of the century. Their views of “pleasant places” in the vicinity of Haarlem captured the freshness of the Dutch countryside in appealing and inviting images (see fig. 14).

Most early seventeenth-century Dutch landscapists and marine painters, including Aelbert Cuyp, similarly captured the essential harmony of humanity and nature, whether depicting farmers or shepherds in their fields, skaters enjoying the ice on a cold winter’s day (cat. 32), or sailors caring for the hulls of ships that were the backbone of the Dutch maritime empire (fig. 4). These artists, seemingly following Karel van Mander’s advice in his 1604 treatise on painting, reveled in their opportunities to travel into the countryside, leaving the city at dawn “to see...
the beauty outside, / where beaked musicians sing in the open.”\textsuperscript{18}

Van Mander’s treatise opens with a poem by P.C. Ketel that contains similar advice:

Take charcoal and chalk, pen, ink, paper
and draw what you see, whatever pleases your eye

Return to the town...
when the trees’ leaves, which gave you shade
serve you no longer.
The landscapes that you have seen outside
and recorded in your book,
you must now paint at home,
and bring to life in colours
which you have ground yourself.\textsuperscript{19}

Cuyp, no less than any of his contemporaries, gained much of his inspiration for his paintings from his drawings after nature. He not only depicted landscapes with distant towns and cities (cat. 75), but also focused on the picturesque beauty of rugged, weatherworn trees (cat. 55), the broad, leafy shapes of woodland plants (cat. 96), or the simple dignity of a reclining cow (cat. 103). However, Cuyp’s interest in landscape elements was not all inclusive. One looks in vain for depictions of dilapidated barns, broken fences, and untended fields, subjects that appealed to many of his contemporaries. The selectivity with which he approached his subject matter and the manner in which he depicted those choices indicate that he brought to his work an underlying framework. Understanding the character of that framework and its relationship to the contemporary political and social environment of the Netherlands as well as to ideas with roots deep in antiquity is essential for assessing the artist’s unique interpretation of the Dutch landscape.

The literary precedents for Dutch ideals of the golden age and arcadia hearken back to ancient Greece and Rome. The poet Hesiod (c. 800 B.C.) was probably the first to describe the five ages — Gold, Silver, Bronze, Heroic, and Iron — although Ovid’s \textit{Metamorphoses} was the main source of such myths for the Dutch. Ovid was particularly expressive in describing a golden age of peace and prosperity when Saturn reigned and man lived in easy communion with nature “untroubled by any fears.” It was, as Ovid wrote, “a season of everlasting spring, when peaceful zephyrs, with their warm breath, caressed the flowers that sprang up without having been planted.”\textsuperscript{20} The closely related concept of arcadia as a pastoral paradise ruled by Pan, with shepherds, shepherdesses, nymphs, and satyrs dwelling in a world revolving around romantic love, stems from the writings of the Greek poet Theocritus (c. 310 – 250 B.C.).\textsuperscript{21} These arcadian
ideas were enormously popular in sixteenth-century courtly literature in France and Italy, literary traditions that, in turn, influenced Dutch writers and poets. A harmonious country existence was also glorified in Horace’s widely read lyrical poem “Beatus ille” and in Virgil’s Georgics and Eclogues.22 Descriptions of an idyllic and peaceful world from Greek antiquity fueled the imagination of the Dutch.23 Playwrights, poets, and songwriters described the new political, cultural, and even physical reality evolving around them in comparable terms, although the images they created of a Dutch arcadia were extremely varied. A number of writers alluded to the joys of pastoral existence in evocative tales of shepherds and shepherdesses living in exotic, foreign lands.24 Some romantic adventures set Greek or Roman shepherds and shepherdesses in the Dutch landscape25 or Dutch shepherds and shepherdesses in a specific Dutch locale (fig. 5).26 Other writers excluded their presence entirely and emphasized the pastoral beauty of the Dutch countryside itself: This setting was seen as no less appealing than the Greek Arcadia, as Hendrick Laurensz Spieghel demonstrated in his description of the onset of spring:

Thalia lead us out by Amsterlandic streams
To see the novel robe of the wet fields and orchards
Whose gaily light-green leaves all of a sudden burst
From swelling, gravid buds out of the dry-skinned branches.
The grass that in the autumn sank under layers of ice
Now raises pointed heads that pierce the water’s surface.
The field, a while ago still an abounding lake,
Shows its rough edges now; its colors are returning.
Where long the darting fish played to their hearts’ content
Soon cattle full of milk will daily be sent grazing.27

Early seventeenth-century references to the Dutch golden age not only commented upon the romantic appeal of pastoral life, but also stressed the social, political, and economic benefits resulting from the new political circumstances brought about by the Twelve-Year Truce (1609–1621). After the years of war and strife, hunger and hardship suffered during the Dutch revolt against Spanish control, the freedom to travel without fear of military encounter, as well as an influx of talented artists and craftsmen from the Southern Netherlands, gave new promise and hope to the Dutch people. The sense of wealth was enhanced by the untold riches that Dutch traders brought from distant shores — spices, exotic flowers and plants, rare shells, and even unknown types of animals and birds. The construction of dikes and windmills added new lands for crops and grazing, while improved waterways allowed commerce to pass easily from city to city, from town to town.28

The celebration of the new land and the benefits of peace were the focus of a number of images. Many Dutch maps had decorative borders depicting major cities, the diverse populace, historical curiosities, and the industrious ways in which careful nurturing of the land and its resources promised to bring prosperity (fig. 6).29 The various print series published in Haarlem and Amsterdam shortly after the signing of the Twelve-Year Truce also reflect these ideas. For example, while Buytewech depicted the ruins of Brederode and Huis ter Kleef in his landscape series of 1616,
reminding viewers of the destruction caused by Spanish aggression, he also included laborers working to reinvigorate the land by clearing and tending woodland and cultivating the soil. Buytewech, who infused his landscape prints with the ideals of Virgil’s *Georgics*, also included scenes of prosperous farms in order to indicate the visual rewards of a virtuous life. Cuyp’s early landscapes depicting well-maintained farms (cat. 6), hard-working peat laborers (cat. 4), and boats ferrying passengers across the river Merwede (cat. 8) share a comparable ideal of a promised land made more prosperous through the careful husbandry and cultivation of its resources by industrious inhabitants.

With peace, prosperity, and ease of travel also came the opportunity to build country houses, pleasant respites situated in garden settings away from the pressures of city or courtly life. The homes built outside urban centers such as Middelburg, The Hague, Utrecht, Amsterdam, and Dordrecht were not grand by European standards. Nevertheless, in a society that increasingly valued the associations of the pastoral, they came to represent the attainment of a fulfilling existence, one quite apart from economic or social status. The ideals of life spent on or near private estates were celebrated in country house poems (*hofdicht*), a literary genre that parallels the type of imagery in Jacob Cuyp’s pastoral portraits. Although international in origin and related in spirit to the writings of Horace and Virgil, these celebratory poems, which appeared as early as 1613 and flourished throughout the remainder of the decade, had a specifically Dutch character. Largely autobiographical, they stressed the enjoyment of gardens and horticulture, the nurturing of friendships, and the enhancement of family virtue.

Country house poetry was but one of the many indications that the Twelve-Year Truce inspired an enormous confidence that peace would help usher in a new era, a new golden age for the Dutch Republic. For example, the anthology *Nederduytscben helicon* (Haarlem, 1610) organized poetry and prose into a narrative that contrasted the blessings of a peaceful Netherlands with the sufferings of the past. After describing the beauty of a number of Dutch cities, the text concludes: “Remain in pleasant peace in each city and village / free within Holland’s garden / * * *Who denies / that this here is Saturn’s golden time?” Only one year later, the historian Johannes Pontanus wrote that Amsterdam was embarking on its golden age. And in 1615, another historian, Jean Le Petit, similarly noted that, with the many military and social improvements enacted in recent years, the Dutch Republic had the potential to enter into a golden age.

Such associations are not surprising since the Dutch were at that time in the midst of transforming their land and defining their own mythol-
ogy. Reclamation projects had done much to change the “dunes, bogs, and lakes...as well as other barren districts, unfit for crops or pastures,” into a landscape that was fertile and productive. Nevertheless, the transformation of the Dutch landscape from an inhospitable region into an arcadian paradise was as much mental as physical. Well into the seventeenth century, foreigners described the land in terms far different from the evocative terms favored by Dutch writers. For example, in 1600 one French observer caustically remarked that Holland in “the winter is an immense layer of ice and in the summer an endless swamp.” Some fifty years later Andrew Marvell’s poem The Character of Holland colorfully describes Holland as “indigested vomit of the sea.”

Arcadia, however, was how the Dutch viewed their own land. This notion took hold in large part because of the allegorical nature of contemporary Dutch thought, which underlay the mythologies the Dutch devised to explain their own history and character. For example, the Dutch firmly believed that they, like the ancient Israelites, were a chosen people, favored and blessed by God’s protection. This analogy, based on the fact that the Dutch, like the Israelites, had fought for their existence against a powerful oppressor, not only lent their struggle against Spain a legitimacy based on historic and heroic precedent, but also allowed the Dutch the assurance that their “promised” land would be one of peace and prosperity. They even used the term fatherland (vaderland) to designate their own land, at a time in which this term was otherwise exclusively used to indicate the “home of our Father,” the destination of every Christian pilgrim.

Thus, the Dutch, who saw themselves as the modern-day Israelites, brought to the classical concept of a golden age a theological and moral component. The bounty they so richly deserved had been provided by God, and every celebration of nature, be it a drawing, a painting, or a discovery through a telescope or microscope, was an act of homage to his greatness.

The Dutch were also in the process of establishing a new society built upon a political structure radically different from those of other European nations. They associated their republic with Rome’s, often using Roman consuls as models of decorum and equanimity for Dutch burgomasters, magistrates, and judges, who were drawn from the wealthiest and most respected families. This comparison became another component of their national myth, as did the successful revolt of their ancient forefathers, the Batavians, against the Romans. As one political pamphlet expressed it in a dialogue between Batavia and a Friend of the Fatherland: “I [Batavia] was in olden times in a free state, thereafter very unfree and now I am returned to my first state...named now...the ‘Hollandsche Republije.’”

For the Dutch, the fiercely proud, bold Batavians epitomized all of their finest qualities, and they frequently invoked their name in the literature of the period. The most important expression of the link between the Batavians and Dutch pastoral life is, without question, J. van Heemskerk’s Batavische arcadia (Amsterdam, 1647). Heemskerk, who stressed this connection in his introduction, dedicated his book to the Dutch aristocracy in hopes of educating readers about his homeland while entertaining them with amorous stories of young lovers who take pleasure rides through the Dutch countryside. Describing his homeland or vaderland as an arcadia, Heemskerk interspersed his narrative journey with descriptions of the landscape and reflections upon the historical events that had made it possible for the Dutch to enjoy a golden age.

At one point in the story the fashionably dressed group even visits a country house, where Heemskerk’s description of its productive dairy
with well-fed cows, its orchards bursting with produce, and its fertile lands is comparable to a hofdicht or to a painting by Cuyp.45

The underlying sense of well-being and security that accompanies Heemskerk’s fashionably dressed aristocrats as they partake of the pleasures of a homeland was a theme frequently found in later seventeenth-century pastoral literature. The most relevant of these works for our discussion of Cuyp’s approach to the depiction of landscape is Lambert van den Bos’ 1662 publication Dordrechtsche arcadia. Van den Bos not only expressed similar pride in the fatherland, but also localized its arcadian imagery in the landscape and riverscape near Dordrecht.46 Most important, his descriptive passages of the landscape evoke atmospheric effects comparable to those in Aelbert Cuyp’s finest works. His narrative, for example, opens at sunset as two foreign travelers and their horses cross the river Merwede on a ferry going from Dordrecht to Zwijndrecht:

“The sun had begun to set in the late afternoon, and its [fire] heat begun to weaken, when…[a] carriage with two horses, in an ordinary ferry, crossed the Dortsche Stroom [Merwede] to Swijndrecht.”47 Later, the protagonists of his story sit outside an enclosed garden on an idyllic green, where they enjoy “the pleasantness of the day, that was not one of the hottest, while a sweet wind was tempering the rays of sunlight.”48

Despite the similarities between the pictorial characteristics of pastoral literature and the arcadian imagery of Cuyp’s mature paintings, the two worlds are quite different. Cuyp never required such an extensive narrative thread to give interest to his landscapes, which, enhanced by the poetic beauty of atmospheric effects created by the setting sun and passing clouds, are there for us to quietly behold and enjoy. Although in Cuyp’s mature works travelers frequently pass through the landscape, most of them are incidental figures, ones who demonstrate through gesture and demeanor both the freedom to move through the countryside and the pleasure of viewing the pastoral beauty of the land (fig. 7). Occasionally, Cuyp portrayed aristocratic families riding out to enjoy the countryside or to hunt (cat. 29), but even in such paintings (often done in the manner of a hofdicht), he avoided anecdotal incidents that would freeze the moment in time and place. While some of Cuyp’s landscapes do form a setting for religious or mythological scenes, such works are in the minority.

The underlying basis of Cuyp’s distinctive pictorial language remained remarkably consistent throughout his career, whether he was painting his native Dutch countryside or an evocative vision of an idealized Dutch landscape seen through an overlay of pastoral beauty. The most important shift of emphasis may well be in the range of human activities that he depicted, for unlike his early paintings, his mature works rarely suggest that human endeavor is fundamental to the benefit of society.
In these works, Arcadia is an accepted, enduring state of being. Shepherds, huntsmen, and travelers alike partake of its benefits without laboring to maintain and improve it.

**The Cuyp Family**

Aelbert’s choice of career was largely determined by his family’s importance among the artists and artisans of Dordrecht. When Cuyp’s grandfather, the glazier Gerrit Gerritsz Cuyp, arrived in Dordrecht in the early-to-mid 1580s from Venlo in the Southern Netherlands, Dordrecht was without a significant artistic heritage. Nevertheless, one painting he certainly would have admired was a late fifteenth-century altarpiece commemorating the Saint Elizabeth Flood of 1421. On the outer wings of the altarpiece was the earliest painted view of the city’s distinctive profile, a depiction of the destruction this terrible tidal deluge caused to Dordrecht and its nearby villages and hamlets.

During the mid-sixteenth century a few minor artists were active in the city, but most of the important commissions were awarded to painters from other centers, among them Willem Key (1529–1568) from Antwerp, Jan van Scorel (1495–1562) from Utrecht, and Maarten van Heemskerk (1498–1574) from Haarlem. Even as late as 1621, town officials awarded a prestigious commission to paint for the town hall a representation of the 1618–1619 meeting of the Synod of Dordrecht to the Delft artist Pouwel Weyts (d. 1629). Indeed, the 1629 commission for a panoramic view of the city and its surrounding waterways (fig. 8) was awarded to the Utrecht artist Adam Willaerts (1577–1664), indicating that well into the seventeenth century the city fathers continued to lack confidence in the ability of local painters to create works that celebrated Dordrecht’s appearance and historical significance. Nevertheless, this imposing work would eventually serve as an inspiration for Aelbert Cuyp’s panoramic views of his native city (see cats. 35, 36).
Gerrit Gerritsz Cuyp joined the Saint Luke’s Guild in Dordrecht in 1585, the same year that he married the Dordrecht widow Geerten Matthijsdr. Within ten years he had established a prosperous business primarily focused upon glazing and decorative painting. His artistic abilities are manifest in his only extant work: a glass window in the Sint Janskerk in Gouda (1596) that depicts the Dordrecht maiden in the Dutch garden surrounded by the four cardinal virtues. The cartoon for this window also demonstrates the artist’s not insignificant merits as a draftsman.54

Gerrit’s son, Jacob Gerritsz Cuyp, was a versatile artist who joined the Saint Luke’s Guild in 1617. He not only dominated the city’s artistic life for almost half a century, but also taught an entire generation of Dordrecht painters, including his half brother Benjamin and his son Aelbert. Other pupils include Paulus Lesire (1611 – after 1656) and Ferdinand Bol (1616 – 1680).55 As a pupil of Abraham Bloemaert, a Utrecht master of Dordrecht descent, Jacob Cuyp depicted history scenes, religious subjects, still lifes, and poultry. He even painted a signboard. Nevertheless, Jacob was primarily a portraitist and the good citizens of Dordrecht were highly taken with his sober, skillful manner of painting.56

Aside from his pastoral portraits (fig. 3), he also depicted pendant portraits, in which he portrayed sitters in conservative clothing against a gray-green background (figs. 9, 10).

Aelbert’s uncle, Benjamin Cuyp, was an inventive artist who joined the Saint Luke’s Guild in 1631. He produced inn scenes and religious subjects, making numerous variations of favorite themes, among them the Nativity, the Adoration of the Shepherds, and the Conversion of Saul (fig. 11). Although little is known about his artistic contacts, he was apparently familiar with the work of Rembrandt, perhaps through the encouragement of Jacob Cuyp.57

Aelbert Cuyp’s Artistic Training and Stylistic Evolution

Assessing the precise stages of Aelbert Cuyp’s stylistic and thematic evolution is difficult because of the lack of documentation and of dated works of art. Nevertheless, a general view of Cuyp’s training and artistic development has evolved through the years based on the research of a number of scholars.58 Although no documents describe Aelbert’s role within his father’s active workshop, he almost certainly painted landscape backgrounds, and even animals, in a few of Jacob’s figurative compositions. Interestingly, Aelbert continued to assist his father’s artistic production in the early 1640s (see cat. 3) after he had begun to paint independent compositions (fig. 12). During this same period, he incorpo-
Cuyp certainly knew Van Goyen’s paintings and drawings, and, perhaps inspired by the latter’s interest in traveling to distant reaches of the Dutch Republic, he literally followed in the older artist’s footsteps to Amersfoort, Nijmegen, Rhenen, and beyond. Nevertheless, it seems improbable that he was ever Van Goyen’s student. While Cuyp’s early painted landscapes are also monochromatic, they are executed with dense paint and vigorous brushstrokes that differ from the loose brushwork characteristic of Van Goyen’s style. The elegantly rendered trees in Cuyp’s drawings (cat. 51), moreover, are more comparable to those in drawings and etchings by the Rotterdam artist Willem Buytewech (fig. 14) than to those in Van Goyen’s work.

While this stylistic association hardly identifies Buytewech as Cuyp’s teacher (Buytewech died when Cuyp was but four years old), it indicates that Cuyp was familiar with artistic traditions in Rotterdam. Cuyp’s
stylistic and thematic connections with other Rotterdam artists, including Herman Saftleven the Younger (1609–1685), his brother Cornelis (1607–1681), and Simon de Vlieger (c. 1601–1653), raise the possibility that he studied awhile in Rotterdam. Indeed, Dordrecht and Rotterdam had numerous artistic and commercial ties, not only because of their physical proximity but also because of Rotterdam’s location on the trade route between Dordrecht and the North Sea.

While no documentary evidence specifically links Aelbert Cuyp with Rotterdam, drawings Cuyp made about 1640 of the Buurkerk and Maria-kerk in Utrecht (cats. 46–48) confirm that he visited that artistic center early in his career. Hence, it is entirely possible that Cuyp, following a path similar to the one trod by his father, developed his artistic sensitivities in Utrecht, which was, moreover, his mother’s native city. Cuyp, however, probably did not study with his father’s master, Abraham Bloemaert, even though Bloemaert had remained the most important teacher for young artists in Utrecht. Although extremely versatile, Bloemaert did not paint native landscapes or stall interiors, specialties Cuyp developed early in his career.

For a number of reasons, not least among them Cuyp’s early interest in depicting monochromatic native landscapes and stall interiors, it seems that Cuyp came into contact with Herman Saftleven, who had moved from Rotterdam to Utrecht in 1632. At the beginning of his career Saftleven had painted expressive native landscapes, ones that capture the drama of a stormy sky swirling over the flat, Dutch dunescape (fig. 15). Although broadly reflective of Jan van Goyen’s tonal landscapes of the 1620s and 1630s, Saftleven’s views have more pronounced contrasts of light and dark and more expressively brushed impastos. Cuyp similarly enlivened his dune landscapes from the early 1640s with strong chiaroscuro contrasts and restless brushwork in the impastos. Cuyp’s landscapes, moreover, often include a small shepherd pointing into the distance (see cat. 2), a motif Saftleven also used in his paintings.

In the mid-1630s Saftleven’s talented brother Cornelis, a specialist in animal and genre scenes, joined him in Utrecht. The two artists frequently collaborated in the late 1630s and 1640s, with Cornelis painting figures and animals in Herman’s barn interiors and landscape compositions (fig. 16). Cornelis, who was an excellent draftsman, based his figures on life drawings executed in black chalk (fig. 17). These drawings are extremely close in style to those subsequently made by Cuyp (see cats. 104–106), further suggesting that the young Dordrecht artist was familiar with the artistic production of the Saftleven workshop. The example of the two artists’ successful collaboration would have served Cuyp well as an assistant in his father’s workshop (see cat. 3).

Utrecht must have been an exciting intellectual and artistic center during the 1630s and 1640s for an aspiring artist such as Cuyp. It was there, more than in any other city, that broader European literary and pictorial traditions infused and transformed the indigenous Dutch cul-
tecture. Pastoral ideals in poetry, plays, and painting truly took hold in Utrecht because the city was a melting pot for artists and writers who had lived and trained abroad. For example, Cuyp was certainly influenced by the fanciful scenes of exotic birds and animals made by Roelandt Savery (1578–1639), who had once been court painter for Rudolf II in Prague. Savery often included a variety of animals in his paintings, for example, his *Orpheus Charming the Animals* (fig. 18), in order to suggest ideals of harmony and abundance, themes that became important for Cuyp as well (see cat. 1).

Even more important for determining the character of painting in Utrecht were artists who had traveled to Italy for inspiration. Some, such as Hendrick ter Brugghen (1588–1629) and Gerrit van Honthorst (1592–1656), had discovered there the expressive drama of Caravaggio’s paintings. Others, such as Cornelis van Poelenburch (1594–1667), had been inspired by the classical dignity of Raphael’s mythological and religious figures as well as by the idealized arcadian landscapes found in small copper paintings by Adam Elsheimer (1578–1610). Still others, in particular Jan Both (d. 1652), had become entranced by the golden light that flooded the Italian *campagna*. The resultant artistic ambiance in Utrecht was unlike that in any other city: the imaginative evocation of an idealized world was valued above the realistic impulses so esteemed in other Dutch artistic centers.

Cuyp, directly or indirectly, responded to this Italianate ideal. Like Saftleven, he adapted the visual vocabulary of such artists as Cornelis van Poelenburch and Jan Both to create a new vision of the native Dutch countryside. Cuyp was particularly influenced by Both, who had returned to Utrecht in 1642 just as the younger artist was embarking upon his artistic career. Both’s evocative images of peasant travelers passing through hilly landscapes softly illuminated by early morning or late evening light (fig. 19) emboldened Cuyp to infuse his paintings with comparable effects. Eventually, however, Cuyp transformed Jan Both’s gracefully rendered wooded hillsides and diffused Italianate light into his own idiom, one that emphasized the flat expansiveness of the Dutch landscape and the atmospheric clarity of the Maas river valley. Cuyp always maintained a tangible sense of weight and mass in his landscapes,
Cuyp, presumably eager to give his Arcadian interests new visual stimuli, ventured forth again to record what was for him a distant landscape. The drawings he made on this extended trip served him well for numerous panoramic paintings he made during the 1650s (see cats. 38, 42), which reflect both the beauty of the landscape and a sense of peace and prosperity.

As Cuyp began infusing his native landscapes with Italianate atmospheric effects, his painting techniques evolved subtly. In his early paintings, most of which he executed on panel, Cuyp primarily used thin, opaque layers of paint that he occasionally applied wet in wet. His approach was quite painterly, with vigorous yellow brushstrokes indicating landscape elements, such as grassy knolls or reeds growing along riverbanks (see cat. 7). Occasionally he gave added texture to distant landscapes by dragging a brush through drying paint. About 1650 he began to be more suggestive and less descriptive in creating atmospheric effects or in modeling form. For example, he began joining the varied rhythms of quickly applied brushstrokes, a characteristic of his early style, with freely applied planes of color in order to suggest flickering reflections on water or clouds illuminated at sunrise or sunset (see cat. 28). Nevertheless, he continued to give weight and structure to his paintings through the thick application of paint, particularly on large forms, whether the hull of a sailing boat or the hide of a cow.

By the mid-to-late 1650s, Cuyp had begun to paint almost exclusively on canvas, particularly for his large, panoramic scenes. For these works, he simplified his painting techniques, devising new means that may have been inspired by Dutch Italianate painters. He suggestively indicated distant forms with broad strokes brushed over an exposed underlying imprimatura layer, allowing it to become an active design element (see
Cuyp seems to have stopped painting a number of years before his death in 1691, perhaps because of the civic and religious responsibilities he had assumed after his marriage in 1658. There is certainly no indication that his style went out of fashion: he was an extremely proficient artist who had a ready market for his works throughout his career. Whether or not he had an active workshop is a question that cannot be easily answered. Although his style was imitated by other artists during his lifetime, Houbraken identified only one student, Barent van Calraet (1649–1737). Houbraken wrote that Calraet went to Cuyp when he was fifteen years old, which would place his apprenticeship in the mid-1660s, about the time that Cuyp’s production seems to have slowed down.69 However, because the date of this apprenticeship seems unlikely and because Barent’s older brother Abraham van Calraet (1642–1722) often painted in Cuyp’s style (see Chong’s essay), Houbraken may have confused which of the two brothers studied with the master.70

During the seventeenth century, Cuyp’s fame remained almost entirely local: only a few documents indicate that his paintings were then collected in other artistic centers. His large-scale paintings, many of which can be dated to the 1650s and 1660s, must have been acquired primarily by wealthy patricians in and around Dordrecht. But the nature of Cuyp’s patronage, as well as the manner in which his reputation spread to foreign shores, is another question (see Chong’s essay).
1. I would like to thank Anna Tummers for her help and advice in writing this essay. I would also like to thank Emilie Gordenker, Joaneath Spicer, Shirley Bennett, and Meredith Hale for their thoughtful comments on the text.

2. Dordrecht received its municipal rights in 1220.

5. By the seventeenth century, Dordrecht’s mercantile importance had diminished as shippers, searching for less costly ports, increasingly chose to go through Amsterdam and Dordrecht’s neighbor, Rotterdam.

6. For a historical account of the Remonstrant / Counter-Remonstrant dispute, see Gey 1966, 3, 177. For an interesting discussion of the international repercussions of the synod, see Van Deursen 1994, 31–41.

7. The most extensive biography of Cuyp is found in Chong 1992, particularly 83–102.

10. The marriage was celebrated on 30 July 1658.

11. The couple had one daughter, Arendina (b. 1659), who married Pieter Onderwater.

14. Gerrit Gerritsz Cuyp was probably Jacob Cuyp’s first teacher. Houbraken indicated that Jacob taught Benjamin as well as Aelbert. Although Benjamin lived most of his life in Dordrecht, he was listed as a painter in The Hague in 1643 and in Utrecht in 1645. For Benjamin, see Dordrecht 1777, 17–18, 42–52; Chong 1992, 88.

15. Not only did Jacob Cuyp include animals in his paintings, he also made a number of animal drawings that were engraved by R. Persyn and published by Nicolaes Visscher in 1641 as Diversa animalia quadrupedia ad vivum delineata a Jacobo Cuyp. See Holstein 1949–1950, vol. 17, Reinier van Persijn nos. 11–23, 73–74.

16. Houbraken 1718–1721, 1, 237; Houbraken noted that Jacob was one of the prime movers in establishing the painters’ guild of Saint Luke in Dordrecht in 1642.

17. See, in particular, Kettering 1983, 63–82.

18. Van Mander 1604, folio 34: "En gaen sien de schoon-heyd / die daer is buyten / Daer ghebecte weide musijcker fluyten." The text appears in Van Mander’s chapter on landscape in his theoretical poem Den grondt der edel vry schilder-const (The Foundations of the Noble and Liberal Art of Painting), which he published in Het Schilder-boeck (Haarlem, 1604), see Van Mander and Miedema 1973, 11204–205. The English translation is taken from Buijsen in Leiden 1993, 47.

19. Van Mander 1604, folio 34:

   Neemt koöd en krije, [sic] pen, inckt, pampiere,
   Om teek’n en dat ghy siet, oft u de lust ghebiedt,
   ………………………
   Keert weer naer Stadt…
   Als t’lommer u belegeet, t’welck u beschauduvt heeft,
   Steelt t’huys al dat, ghy saeght hier buyten,
   T’gen ghy int Boeck beschrewe, sulck lantschaps doen aeneleef,
   Met verwen die ghy vreeft, “ maekt dat het leeft.

20. Ovid compresses Hesiod’s five ages into four. For the description of the Golden Age, see Ovid, Metamorphoses, book 5, lines 89–112.

21. The actual source of Theocritus’ idyllic world was an area called Arcadia on the central plateau of the Greek Peloponnesse, populated by shepherds and hunters who worshiped Pan.

22. These texts were widely known in the Netherlands through contemporary translations by eminent Dutch scholars. Horace’s text was translated into Dutch by Dirck Volkertsz Coornhert at the end of his treatise, Recht Ghebrayck ende Misbruyc van tijdliche hawe (Amsterdam, 1610). Virgil’s Georgics and Eclogues were translated by Karel van Mander: P. Vergili Maro, Buocolica en Georigica, dat is Oisen-stel en Land-werk. Nu eerst in rijm-dict vertaels, door K. V. Mander (Haarlem, 1597). Crispijn van de Passe published an illustrated Compendium operum Virgilianorum in Utrecht in 1612. Joost van den Vondel also translated Horace and Virgil.

23. Mannerist painters delighted in depicting allegorical images of “The Golden Age,” in which sensuous and evocative gods and goddesses lived in a world of peace, harmony, and prosperity as they lounged gracefully around banquet tables. See Sluijter 1986.

24. The most important play of this type is Pieter Cornelisz Hooft’s Granida (1605), which focuses on the romantic adventures of Granida and Daifilo. Although the story unfolds in Persia, the landscape descriptions reflect an arcadian vision that Hooft derived from Giovanni Battista Guarini’s popular play, Il Pastor Fido (Venice, 1689). For an excellent discussion of the differences between the two plays and their impact on Dutch society, see Kettering 1983, 102–113.

25. The most important of the numerous examples of this type of imagery is Karel van Mander’s section on landscape in Den grondt der edel vry schilder-const, as quoted in Schenken-
veld 1991, 94–95, and Kettering 1983, 5; see also London 1986, 35–43, for an English translation of Van Mander’s text. Jacob Cats also wrote extensively in this vein. See, for example, “Harders-klachte,” which was first published in Silenus Alciatid, sive Proteus (Middelburg, 1618). This poem revolves around the romantic adventures of Daphnis and Galathea in the province of Zeeland. After Cats moved to Dordrecht in 1623 he republished it in expanded form as “Galathee ofte Harders-klachte,” in Proteus ofte Minnevaerden veranderd in Sonebeelden (Rotterdam, 1627). At this time he eliminated many of the specific references to Zeeland; see Kettering 1983, 22.

26. Theodore Rodenburgh, in Anna Rodenburgh’s Trouwen Batavier (Amsterdam, 1617), written 1601–1602, adapted Guarnini’s Il Pastor Fido by placing sixteenth-century Dutch burghers from Leiden and surrounding towns within the woods near The Hague. As Kettering 1983, 21, noted, Rodenburgh identified the hero as a Batavian, thus endorsing him with physical and moral qualities that were considered “truly and admirably Dutch.”

27. Hendrick Laurensz Spieghel’s Hart-spiegel was first published in Amsterdam in 1614. The English translation of this text, which introduces his second book of this publication, is taken from Schenkenspeld 1991, 95. Spieghel’s original Dutch text, also cited by Schenkenspeld 1991, 95–96, is as follows:

Taal-leye leid ons uyt, langs d’Amsterlantse stromen
t’Anschouwen t’nieuwe kleed, van t’natte veld en bomen:
Dien vreilik-blike-leof, drong plotselijcken uyt
(Met swanger knoppen bol) der takken dorre hyvd:
En gers dat onder tij in d’Hereest was ghewoken,
Begon zijn Spichthof hoofd door twaer op te steken:
Het veld dat korts noch scheen een water rijke Meer,
De ruige kanten roon’d, en kreegh zijn verve weer:
Daar lang de sperel-vis na lust had ghaan vermayen,
Daar zouden alle daegh melkrijcke besten wagen:
Dien waight het doffe hoy, en tochten zeer na tveld

Dar beter voelt: toe vett en grazich zuivel, sneedle.

29. Claes Janz. Vischer’s small vignettes surrounding this map of Holland, published by Pieter van den Keere in 1610, include images of a mermaid imprisoned in a Dutch jail and a man killing a horse by pushing it against a wall. These miraculous occurrences may have been intended to represent Dutch strength.

30. For heilige poems, see Van Veen 1960 and De Vries 1998. See also Kettering 1983, 26–27, who identifies Philip Bert van Borssele’s Boekhorst, written in 1613, as the earliest example of this genre.

31. Helicon 1610, 98:
Ja elke Stadt en Dorp in vrede lustigh blijft
Bin Hollandts Thuyn bevrijdt
gelijck men nu niet blijven
een soete stil’al-os
en alle tweedracht wijkken:
Wie loochent
of tis hier Saturni gulden tijdt?

The English translation is taken from Levesque 1994, 60, who extensively used this important publication as a framework for her interpretation of early seventeenth-century print series.

32. Pontanus 1614, 105, noted that the city was entering “een gulden tijdt.” Pontanus also wrote about the expansion of Amsterdam that could occur during “de selve jaren als onder een gouden tijdt stellen” (the same years as the period of the golden age). I would like to thank Professor Eco Huisman Mulier from the Universiteit van Amsterdam for providing me with this reference.

34. This description is from a petition written to the emperor Charles V in 1548 by the States of Holland. The quotation is taken from Boxer 1990, 6. For a discussion of the reclamation of the Dutch land, see De Vries 1986, 79–86.

35. This quotation, taken from Henri, Count of Rohan, is found in Gibson 2000, xvi.

36. This quotation is taken from Huisman Mulier 1994, 133.

37. See Gibson 2000, 60.

39. The idea that liberty, virtue, and prosperity are best preserved within government that is consultative and reserved to a close oligarchy, as in ancient Rome, was articulated by Hugo Grotius in his Parallelis Rerumpublicarum (survives partially, 1602), and in his De Antiquitate Rerumpublicae Batavicae (see Grotius 1610).

40. The most visible manifestation of the associations with ancient Rome is the Amsterdam town hall. See Goossens 1996, particularly 10–11.

41. See, for example, Grotius 1610. For further parallels drawn between the story of the Batavians and the foundation of the Dutch Republic, see Van de Waal 1974, 28–43.

42. Merck de Wybeyt vermaert van Hollantsche huysbouwen, fol. Aii. The Dutch text reads: “Ick was in oouden tijden in een vrien staaet, daer na zeer onrvij / ende ben nu wederom in myn eerste staaet… nu ter tijt de Hollantsche Republiche gheenaemt.” The English translation is taken from Levesque 1994, 79, who discusses the broader implications of this text for contemporary ideas of the Dutch landscape.

43. Heemskerks 1647 publication is a greatly expanded version of his 1637 publication of this romance. For further discussion of the history of the publication, with bibliographic documentation, see Kettering 1983, 71–73.
44. Heemskerk 1647, 558–559, cites a poem written at the occasion of the conquestr of Maastricht (1632), praising the stadhder Frederik Hendrik (1584 – 1647) and his family for having made possible a golden age: “Ur Vader heeft de grond van ‘t groote werk gheleyf’d En ons een goldenen eeuw standvastigh voorbeyd.” In the epilogue of Van Heemskerk’s Batavische arcadia, the editor suggests that Van Heemskerk chose to name his book “Arcadia” in order to give Holland an arcadia comparable to that claimed by any other land: “Wit de naam van Arcadia aangaer, die geloof ik dat hy uytgekomen heeft op dat ons Hollandt mede sijn Arcadia soude hebben so wel als d’Italienen, de Spangaarden, d’Engelsche, en mogelijk andere volkeren, de haere hebben.”

45. See Kettering 1983, 73.

46. Van den Bos’ 1662 publication was reprinted in Amsterdam in 1701, which is the edition used for this essay.

47. Van den Bos 1701, 17: “De Son begoest in het langen der dagen den Middaghtijn te naerdenen, en sijn brant te met meerder en meerder aan te steken, wanneer een aansienlijke Karos met twee paarden, in de gewoontyke Ponten, de Dordtse Stroom na Swindrecht overgevaren is.”

48. Van den Bos 1701, 24: “Aengenaemhcket van den dagh, die als doe geen van de heetste was, en door een soet windeken de stralen van de Sonne vry matighe.”

49. I would like to thank Jacob M. de Groot, former director of the Dordrechtse Museum, for providing me with the information included in this section of the essay.

50. He probably left the Southern Netherlands because of the political unrest in that region and because of his Protestant beliefs.

51. The altariece was commissioned by the villagers of nearby Wildrecht for the Grote Kerk in Dordrecht, and completed about 1490–1495. After 1572 the wings were kept in the refectory of the Augustinian cloister along with several other paintings. See Balen 1677, 666. For a discussion of the altariece, see Helinus 1991.

53. Illustrated in Dordrecht 1992, 280, fig. 77.

54. Illustrated in Dordrecht 1977, 102 – 103, no. 36.

56. Jacob, the only member of the Cup family of painters to execute a self-portrait, portrayed himself at the age of twenty-five holding a palette and maulstick in the upper left of the 1617 Kopers, Functionaries and Mini-Masters of the Mini of Holland (Museum Mr. Simon van Gijn, Dordrecht). Although no portrait of Aelbert Cup exists, Jacob de Groot believes that Jacob Cuyt may have used his father Gerrit Cup as the model for Apostle Paul in the Dordrechts Museum. This picture and its pendant Apostle Peter are dated 1627. See Chong 1988, 19 – 23.

57. Chong in the introduction of Dordrecht 1992, 18, noted that a number of Jacob Cup’s students, including Benjamin Cuyt, Paulus Leste, and Ferdinand Bol, eventually came under the sway of Rembrandt.

59. Diversae animalia quadrupedia ad vivum delineata a Jacobo Cupio, see Hollstein 1949 – , vol. 17, Reinier van Persijn, nos. 11 – 23, 71 – 74 (see note 15). Although Reiss 1975, 31, 43, points to a number of instances in which Aelbert used these prints as models, Chong 1992, 353, plausibly suggests that Aelbert may have made some of the drawings used as models for this print series.

60. Houbraken 1718 – 1721, 1: 237, notes that in 1642 Jacob was one of the prime movers in the establishment in Dordrecht of a Saint Luke’s Guild. This guild would have focused more exclusively on the needs of painters than had the organization from which they split, the Guild of the Five Trades (Gild van de vijf Neringen).

61. For the possible influence of Jacob Cup on Aelbert’s manner of depicting landscape, see the essay by Haverkamp-Begemann. The Middelburg artist François Ryckhals (1600 – 1647), who was active in Dordrecht in 1633 – 1634, painted stall interiors similar to those Cup later executed (see cat. 15); See Bol 1982, 21 – 29.

63. Chong 1992, 88, raises the possibility that Cup and Jan van Goyen knew each other through the intermediary of Cup’s neighbor, the still-life painter Jacques de Grief (called Klauw), who married Van Goyen’s daughter in 1649.

64. Bloemaert, moreover, was a devout Catholic, and Cup’s family was devoutly Protestant. Jacob Gerrittsz Cup’s strong religious convictions, which he developed subsequent to his own student days, may have deterred him from sending his son to study with a Catholic, even such an esteemed master.

65. It is possible that Cup’s family had contact with the Saffleven in Rotterdam, where Herman had joined the painter’s guild in 1627. For example, stylistic and thematic similarities exist between the broadly executed, monochromatic peasant scenes painted by Aelbert Cup’s uncle, Benjamin Gerritz Cup, and those made by Herman Saftleven’s
brother, Cornelis. For Chong’s discussion of Cuyp’s relationship to Saffleven, see Chong 1992, 255, and for an overview of Rotterdam as an artistic center, see Rotterdam 1994–1995.

66. By 1635 Saffleven had begun to paint in a broad, generalized style of landscape influenced by the Utrecht painter Cornelis van Poelenburch. In that year he executed The Wounding of Dorinda, which he painted in collaboration with Hendrick Bloemaert (Gemäldegalerie, Staatliche Museen zu Berlin-Preussischer Kulturbesitz, 958). This work was part of an important commission from the prince of Orange, Frederik Hendrik, for a series of paintings illustrating scenes from Guarini’s play Il Ristor Fido. For an excellent discussion of this series, see The Hague 1997–1998, 216–225.

67. As Marten Jan Bok has noted in Baltimore and San Francisco 1997–1998, 389, Herman Saffleven did not become a citizen of Utrecht until 1654. Thus, one may assume that he did not register as a master painter in the Utrecht Saint Luke’s Guild until that time, and would not have had to register students working with him during that period. Cornelis Saffleven appears to have worked closely with his brother in Utrecht between 1634–1637, when he returned to Rotterdam.

68. Another important animal painter in Utrecht was Gijsbert Gillisz de Hondecoeter (1604–1655).

70. See Chong 1992, 95. For a catalogue of Calraet’s paintings (whose monogram, A.C., has often been confused with that of Cuyp), see Chong 1992, 502–529.
Aristocratic Imaginings: Aelbert Cuyp’s Patrons and Collectors  Alan Chong

In 1829, Thomas Emmerson sold a painting in London attributed to Aelbert Cuyp — the imposing equestrian scene now in the Metropolitan Museum of Art (see detail, page 34). The auction catalogue described the picture as a “Departure for the Hunt of the Prince of Orange; a clear and sunny Landscape, with the Prince of Orange mounted on a Grey Horse giving directions to a Garde de Chasse; his two sons richly habited, are also mounted; near them are several dogs, and figures in the distance.” Coincidentally, four days earlier, a very similar equestrian scene by Cuyp had also appeared at auction: “Morning — Preparing for the Chase. This picture was probably painted for the Stadtholder’s Family, as on the left is an accurate portrait of Maurice Prince of Orange, drawing on his boots; near him is a Moor holding two Horses…in the distance is the Castle of Nassau” (Gordenker essay, fig. 7).

While we might expect eighteenth- and nineteenth-century auction catalogues to describe paintings in fanciful and romanticized ways, these attempts to identify the figures and patrons of paintings by Aelbert Cuyp are not at all implausible. The artist crafted convincing images of wealth, sophistication, and power completely appropriate to a royal or princely court. Attired in exotic dress and surrounded by servants (including an African page), proud horsemen hunt in sun-drenched, Italianate landscapes. All of these features could be encountered in seventeenth-century portraits of rulers and courtiers, especially those by Peter Paul Rubens and Anthony van Dyck, as well as in portraits commissioned by the Dutch court.

In reality Aelbert Cuyp’s apparently courtly images of riders on horseback were produced for far less exalted customers. An inventory taken in 1680 of a collection in Dordrecht identifies Cuyp’s painting in New York as “Mr. Caulier on horseback with the two young gentlemen and Willem the coachman.” Another document of 1749 states that the work “depicts Michiel and Cornelis Pompe van Meerdervoort departing for the hunt with their teacher, servant, etc.” The father of the two boys had died in 1639, therefore the portrait shows them receiving instruction from their tutor Mr. Caulier. The inventories also indicate that the painting hung over the mantel in the children’s room of the Huis te Meerdervoort, a small manor just across the river from Dordrecht. This house can be glimpsed on the left edge of Cuyp’s Avenue of Trees at Meerdervoort (fig. 1), which shows how close the residence was to Dordrecht. This painting must have also been commissioned by the Pompe van Meerdervoort family because the woman with two young boys at the end of the avenue of trees is almost certainly Adriana de Beveren and her sons Michiel and Cornelis Pompe van Meerdervoort.

The significance of Aelbert Cuyp’s images was intimately connected to the social circle of his clientele. This dependence of meaning on patron-
age is all the more important since almost nothing is known about Cuyp when he was active as a painter. The isolation of Dordrecht’s art market relative to other towns in the Dutch Republic suggests a tradition of close connections between Dordrecht’s artists and patrons. The Pompe van Meerdervoort family was characteristic of Cuyp’s patrons: well-to-do Dordrecht burghers who identified themselves with the aristocratic values suggested by Cuyp’s pictures. At the time Cuyp portrayed Michiel and Cornelis Pompe van Meerdervoort, the family was wealthy and socially prominent, but had not yet been admitted to the ruling faction of Dordrecht’s government. The boys’ grandfather Michiel Pompe had made his mark as a successful merchant and minor town official. He purchased Huis te Meerdervoort and added the estate’s name to his own. Since the Dutch Republic did not grant titles and the remnants of the old nobility were gradually dying off, rich city dwellers often acquired “titles” by purchasing estates connected to a noble name — a practice that became especially common in Amsterdam in the later 1600s. Michiel Pompe’s younger son similarly acquired the estate and suffix “Slingeland.”

Equally important for social climbing was strategic marriage. Michiel Pompe’s two sons married daughters of the most powerful man in Dordrecht, Cornelis de Beveren, five times burgomaster, representative to the Staten-Generaal, ambassador to England, and a French knight (De Beveren proudly added a fleur-de-lis to his arms).

Equestrian hunting had long been associated with the courts of Europe, its status visually confirmed by well-established modes of portraiture and by illustrated equestrian manuals. Cuyp provided an image for the Pompe van Meerdervoort family that asserted not only their wealth and sophistication, but more specifically their right to hunt on horseback, an activity long reserved for the court and the aristocracy. For example, Hugo Grotius in 1631 noted that hunting was one of the only privileges retained by the nobility under the Dutch Republic. However, with the demise of the old nobility, new groups — including government officials, bearers of foreign titles, and new owners of country estates — claimed the right to hunt. On several occasions, the Staten-Generaal felt the need to expressly forbid from the hunt those who had acquired new titles. The region of Zuid Holland, which governed the environs of Dordrecht, revised its hunting regulations in 1623. One crucial new provision, which differed from national and provincial laws, expanded hunting privileges to owners of estates and to citizens who had an annual income of 100 guilders. While it has been suspected that hunting had expanded into the upper classes, this provision is firm evidence that a less restrictive policy had been legally adopted by Dordrecht.

Cuyp’s painting asserts the Pompe van Meerdervoort family’s claim to aristocratic hunting rights. The painting sets two young seigneurs (accompanied by their servants) in front of their manor, surveying their estate — vast tracts of land on which they will hunt game on horseback. They are being carefully tutored in hunting and the equestrian arts, as would be appropriate for youthful princes or lords. These would-be aristocrats are presented to the viewer as controllers of land and people. However, the family surely realized how new and tentative these claims were; the Pompe clan was only slowly being admitted to local regency, their hunting privileges had just recently been sanctioned, and even their exalted name had been bought a generation ago. There is no proof that they ever hunted large game on horseback. The glamorous, exotic costumes — mere artist’s props — and the fictive castle Cuyp added to the landscape further indicate the audacity of the family’s pretensions.
Hunting was one of the surest means of asserting status, and images of the hunt seem to have been in considerable demand in Dordrecht. The Pompe family in particular ordered several elegant hunting portraits. At about the same time the large equestrian portrait was made, the boys’ uncle Matthijs Pompe van Slingeland commissioned a portrait from Jacob Cuyp, Aelbert’s father, showing his son hunting with a falcon (Gordenker essay, fig. 5). Both portraits depict exotically attired boys at the hunt. The costumes in each picture share similar brocade trims and elaborate buttons, while the swords depicted in each appear nearly identical. These accoutrements seem to have come from a shared stock of costumes in the Cuyp family studio. About 1655 Matthijs ordered another hunting portrait, this time from the fashionable portraitist Jan Mijtens, who had worked at the court in The Hague. Depicted as a hunter returning with his dogs, Matthijs appears with his second wife and eldest daughter (fig. 2).

How demanding Aelbert Cuyp’s patrons were in determining the themes, costumes, and other details seen in the artist’s commissioned portraits is not certain. Many of the features found in the portrait of the Pompe van Meerdervoort boys — the exotic attire, the equestrian hunt, the Italianate landscape filled with ruins, the topography based on Cuyp’s landscape sketches made around Elten — occur in nearly all Cuyp’s equestrian portraits (see cat. 37). And since several different patrons commissioned these portraits, they most likely did not determine the inclusion of more than one or two relevant details. Rather, Aelbert Cuyp invented a complete mode of portraiture suited to an entire class of patrons. Because his equestrian portraits are derived only generally from the earlier aristocratic examples of Daniel Mijtens and Anthony van Dyck, Cuyp’s role in devising this new model for this group of clients must have been especially strong. This newly minted imagery also filtered from Cuyp’s commissioned portraits into his pure landscapes. It is especially significant that specific aspects of Cuyp’s art reinforced the basic theme of aristocratic hunters. The exotic costumes and the golden, sun-drenched scenery, derived from the work of Jan Both, evoke a luxurious, elegant way of life, far away from the quotidian existence in Dordrecht.

This complex process of invention seems to have partially involved Aelbert’s father. Jacob Cuyp must have introduced some of his clients
to this son. Their collaborative group portrait of 1641 (cat. 3) has a hunting theme, as do Jacob Cuyp’s portrait dated 1649 and Aelbert’s portrait of a family of about the same year (Gordenker essay; figs. 5, 9).\textsuperscript{11}

In this last painting, some family members are attired in fancy velvet caps, jackets with slit sleeves, Moorish turbans, and silk robes — just the kind of costuming found in the Pompe van Meerdervoort portrait. Although these earlier hunting portraits lack an equestrian element, they indicate the taste for hunting portraits in Dordrecht.

Aelbert Cuyp’s first equestrian portrait, created for Pieter de Roovere about 1650 (fig. 3), lies surprisingly outside the tradition of equestrian portraits. As is the case with many of Cuyp’s paintings, the interaction between an upper-class horseman and a peasant or servant is central to the image. Dressed in a rich velvet costume, Pieter de Roovere gestures imperiously toward a fish as if he were a lord exacting tribute from a serf. The cannon salute and the manor house in the distance confirm the sitter’s patrician authority. Although Pieter de Roovere had no official function as a fishing inspector, fishing was a major source of revenue for his estate at Hardinxveld,\textsuperscript{12} as well as a prime commercial attribute of such long-standing importance in Dordrecht that it often appeared in maps and printed views of the city’s waterways. However, compared to the stately images of Titian and Van Dyck, and even to Cuyp’s later paintings of elegant hunters, the De Roovere portrait is awkward, and its subject, the supervision of fishing, is not an especially fashionable activity. Indeed, the portrait cannot have been much of a hit with Cuyp’s patrons since the artist undertook nothing comparable afterward.

Pieter de Roovere occupied almost exactly the same social position as did the Pompe family.\textsuperscript{13} His father had bought an estate just outside Dordrecht and with it certain agricultural rights. Pieter de Roovere succeeded his father as the regional bailiff, a minor post with few real duties. De Roovere, like the Pompe brothers, married into the powerful De Beveren family. Pieter de Roovere amassed considerable wealth and his widow owned the largest recorded collection of paintings in Dordrecht.\textsuperscript{14} Significantly, the couple had five other works by Aelbert Cuyp, including paintings of cattle in a barn, a horse, two horses on a bridge, and the Valkhof at Nijmegen.\textsuperscript{15} Although no other specific details of these paintings are known, the De Roovere family seems to have favored works by Cuyp with cattle and horses — even his depictions of Nijmegen usually contain elegantly dressed horsemen (see cat. 33). The De Roovere pictures also illustrate activities of the Hardinxveld estate such as farming, fishing, and cattle breeding, thus indicating the family’s role as managers of their property. This preoccupation with agriculture was
as essential a component of aristocratic country life in seventeenth-century Holland as it would become in eighteenth-century England.

Among Jacob Cuyp’s best clients were the Berk family, who also commissioned Aelbert Cuyp to produce a major equestrian portrait. Erkenraad Berk and her husband Adriaen Snouck were painted by Aelbert Cuyp (cat. 40) shortly after 1654, when the couple were married.16 Adriaen Stevensz Snouck (c. 1634 – 1671) was born in Rotterdam and lived in The Hague before he married Erkenraad Berk (1638 – 1712). Marriage into a powerful family gave Adriaen Snouck entry into Dordrecht’s governing councils. Erkenraad’s father was city secretary and briefly pensionaris; her mother was the sister of Pieter de Roovere. Cuyp’s equestrian portraits with hunting themes became popular in Dordrecht. However, as in a depiction of a cavalry officer tying ribbons on his horse (Gordenker essay, fig. 8), the identity of the sitter is usually not known. This figure wears a breastplate, a satin sash, and the sort of fancy dress (militaristic rather than authentically military) typical of Dutch civic militias.17 Guard officers in Dordrecht were almost always city officials or members of regent families, and several are recorded patrons of the Cuyp family. Other landscapes by Cuyp depict upper-class horsemen in a manner nearly identical to commissioned portraits. Such paintings may have been destined for clients who could not afford specially commissioned portraits, or may have been meant to accompany such works. Many of Cuyp’s landscapes have hunting themes. One example (fig. 4) shows a horseman at rest, his mount held by a groom, while the hunt continues in the distance. The contrived and rather peculiar anonymity of the picture — the hunter’s face is hidden by the horse — creates a “portrait-in-kind” that allowed the owner to identify with the hunting scene. Related to this type are Cuyp’s paintings of elegantly dressed horsemen traveling through the countryside. In an expansive landscape with travelers and peasants (cat. 38), riders wear exotic jackets trimmed with fur similar to those seen in Cuyp’s portraits. One horseman points his riding whip toward nearby peasants, a gesture that closely echoes the haughty superiority depicted in Cuyp’s equestrian portraits.

The juxtaposition of the classes, so crucial to the sense of authority generated in the equestrian portraits, is often found in Cuyp’s landscapes. In scenes with horsemen (cats. 29, 40), Cuyp used lowly peasants, shepherds, or pages to delineate the prestige of the riders, who seem to need a supporting cast in order to have any status at all. Cuyp suggests that these horsemen possess estates with castles, own enough land for hunting, or control agricultural production. Indeed, some of Cuyp’s
patrons did, but many more hoped to. Even when the horseman is not evidently a feudal landlord, but merely a well-off traveler asking the way (cats. 25, 38) or an itinerant artist (dismounted) sketching the scene as shepherds doze (cat. 29, fig. 1), adjacent rustics amplify his rank.

Cuyp’s painting of a riding school before a Romanesque church (cat. 39) also has obvious aristocratic connotations. The statues and the ancient ruined fragments lend a classical elegance to the scene. The sculptural and architectural motifs, as well as the framing buildings, are borrowed from the work of Cornelis van Poelenburch. The horseman has brought his mount into a levade, a position essential in dressage and ubiquitous in royal equestrian portraits. The richly dressed rider at the right gestures authoritatively with his whip. Cuyp apparently borrowed his image from Crispijn van de Passe’s prints for Antoine de Pluvinel’s dressage manual *Manege royal* (published in Paris in 1623 and in Utrecht shortly afterward), which shows Pluvinel instructing Louis XIII in the equestrian arts.

Although the evidence is limited, Cuyp’s patrons seem to belong to the “striving classes” — families with newly acquired wealth who were only beginning to break into the most powerful circles in Dordrecht and were unafraid to lay visual claim to prestigious rights associated with the ancient nobility. Evidence also suggests that a majority of Cuyp’s patrons, along with the artist himself, were connected to the Orange faction. During the Stadtholderless Period of 1650–1672, the government of the Dutch Republic was controlled by the Dordrecht brothers Cornelis and Johan de Witt. When political and economic crisis in 1672 brought about their overthrow and execution, a sweeping change in Dordrecht’s town government was ordered by Willem III. An entirely new regency consisting of a “Hundred Men” was nominated; the group included Aelbert Cuyp, who by this time had abandoned his career as a painter. From this body, the new governing councils were chosen. Cuyp himself joined a judicial tribunal. Many of the artist’s patrons were part of the new regime, including the De Beveren clan, which, as rivals of the De Witts, had long been out of power. The son and son-in-law of Pieter de Roover became, respectively, bailiff of Zuid Holland and burgomaster. Matthijs Pompe van Slingeland and his son received important posts, while Cornelis Pompe van Meerdervoort (cat. 29) was allowed to continue in office.

Several of Aelbert Cuyp’s best clients, as well as the artist himself, were new members of the regency who had never before held office. Abraham Heyblom was a modestly successful apothecary who was elevated to the town council in 1672. He lived near Aelbert Cuyp, borrowed money from him, and owned six of his paintings. The merchant Johannes Bladegom van Woensel also joined the town council, later becoming burgomaster. He served on the Hoge Vierschaar (high court) of Zuid Holland with Cuyp; therefore the two must have known each other well. Johannes owned as many as five paintings by Cuyp.

These men, some old regents, others new, all supported the new stadtholder, Willem III. Whether or not these alliances were operable in the 1650s when Cuyp was actively painting, Cuyp very likely worked within a close-knit group of patrons whose politics and aspirations he shared. In addition, Cuyp’s family was closely associated with Dordrecht’s Counter-Remonstrants, who strongly supported the prince of Orange. Jacob Cuyp had been an elder of Dordrecht’s Waalse Kerk, a conservative participant at the 1618–1619 Synod of Dordrecht. Even more significant, Aelbert Cuyp’s wife Cornelia Boschman was the granddaughter of the theologian Franciscus Gomarus, founder of the Counter-Remonstrant
movement itself. While these various connections are widely separated in time, a social network consisting of local factionalism, intermarriage, royalist sentiment, and theology connects Aelbert Cuyp with his group of patrons. Equally remarkable is the absence of Cuyp’s work from the collections of powerful families in the rival faction: the De Witts, Van Blijenburghs, and Muys van Holys. Nor was the famed Trip family an important patron.

Paintings by Aelbert Cuyp were also popular among wealthy merchants in Dordrecht, who bought several works by the artist, as well as some by his father and uncle. Aert Teggers, an independent tax collector, owned the largest gathering of paintings attributed to Aelbert Cuyp in the seventeenth century. Teggers ran the first coffee house in Dordrecht and appears to have been an art dealer. Cuyp’s paintings, which averaged 21.4 guilders apiece, were not particularly expensive. The highest valuation recorded before 1750 is 80 guilders in 1673 for a view of the fleet at Nijmegen (fig. 5). Somewhat surprisingly, Benjamin Cuyp’s hastily produced paintings were slightly higher in value and far more common in local collections. Works by artists such as David Vinckboons, Cornelis van Poelenburch, and Philips Wouwermans were much more highly valued in Cuyp’s home town.

Aelbert Cuyp was a local painter in every sense. He painted exclusively in Dordrecht, sold all of his pictures to locals, and often painted familiar regional subjects. The painter himself was remarkably similar to his clients. The Cuyps were a respectable, church-going family of moderate wealth; they lived in a big house on a “good” street. If one can conceive of a middle class in seventeenth-century Dordrecht, the Cuyp family was positioned at the upper end of it. Aelbert Cuyp possessed about the same amount of property as the majority of his patrons did. The painter worked for his social equals (neighbors and political colleagues) as well as for a few very wealthy patrons who were anxious to insinuate themselves into the aristocracy and regency.

This is not to say that Cuyp lacked ambition, for his acquisition of property and, more important, the elegance of his paintings suggest otherwise. His elevation to the peripheries of the regency in 1672 depended not on his marriage but on his connections with the stadtholder’s party, which seem to have developed during his career as a painter. Cuyp appears to have crafted an image for himself, just as he crafted images for his clients, whose status was enhanced by the landscapes and portraits he painted for them. Cuyp himself became something of a seigneur following his marriage in 1658, soon after which he seems to have given up painting in order to manage his estate and that of his wife’s family. He administered vast tracts of agricultural land near Dordrecht, diligently collected rent from dozens of tenants, and at one point even received
fish as payment for rent, just as Pieter de Roovere does in the portrait Cuyp had painted years before (fig. 3). In an important sense, Cuyp painted his way into the upper echelons of Dordrecht society.

**Afterlife: The Appreciation of Aelbert Cuyp**

Aelbert Cuyp's landscapes were appreciated by collectors of the nineteenth century for reasons nearly identical to those that surrounded their creation. Images of aristocratic life and landed power, although carefully constructed in the 1650s for clients in Dordrecht, were readily understood by later collectors and critics — viewers who possessed little or no knowledge of seventeenth-century Dutch society. Britain in particular provided the ideal setting for the afterlife of Aelbert Cuyp. While loved for their gilded beauty and careful verisimilitude, Cuyp's landscapes also perfectly illustrated the aspirations of the British landed gentry and aristocracy. Horses, hunting, and husbandry were the common preoccupations of painter, patrons, and later collectors.

Aelbert Cuyp was almost totally unknown outside his native Dordrecht in the seventeenth century. Surprisingly enough, seventeenth-century sources do not refer to Cuyp as a painter.23 Dordrecht alone preserved the memory of Aelbert Cuyp in the years following his death. The Dordrecht painter and writer Arnold Houbraken in 1718 provided the first and, for more than a century, only account of Cuyp's career. Houbraken stated that Aelbert was a pupil of his father and correctly listed some of his favored subjects, including moonlit scenes and Dordrecht's riding school.24 The author also recognized that Cuyp sketched the environs of Dordrecht in black chalk and colored washes. Most important, Houbraken characterized the distinctive quality of Cuyp's landscapes: "Moreover, he paid attention to the time of day when he depicted subjects, so that one can distinguish in his pictures the misty sunrise from bright noontime, and these in turn from saffron-colored sunset."25

The most important collector of Cuyp's paintings, in any era, was Johan van der Linden van Slingeland, a Dordrecht iron dealer and mint-master who owned ten major works by Cuyp by 1752 (including cats. 16, 24, 28, 32, 38, 39, 44) and as many as forty-one in 1785.26 He probably bought most of his pictures from local families.27 When the collection was sold in 1785, several works made extremely high sums that were not equaled for decades — the record was held by the equestrian landscape with ruins (cat. 39). Compared with works by his contemporaries, Cuyp's paintings were exceptionally slow to appear on the international art market. While London auctions are full of Dutch paintings from 1690 onward, Cuyp's name does not appear in London sale records until 1741 and a significant number of references do not appear until the 1760s.28 Although none of the principal art writers of the early eighteenth century mention Cuyp at all, Richard Wilson certainly appreciated him. When asked who the best landscape painter was, Wilson replied, "Claude for air and Gaspard for composition and sentiment, but there are two painters whose merit the world does not yet know, who will not fail hereafter to be highly valued, Cuyp and Mompers."29 Among the few paintings attributed to Cuyp that attracted any critical attention was the landscape that Sir Nathaniel Curzon purchased in 1759 (fig. 6). Although the painting can now, I believe, be attributed to Abraham van Calraet, Cuyp's principal student, it brought Cuyp's name to the attention of the many tourists who visited Kedleston Hall.30

In 1769, John Boydell compiled a volume of prints (fig. 7) etched after old master paintings; Cuyp's expansive river landscape (cat. 45), then owned by the third earl of Bute, was lovingly described:
The distant groupe of sheep and figures, which appear between the opening of the trees, are involved in the bright misty rays of the sun, which is exactly the character of nature, and is executed in a manner equal to any thing of the like kind ever painted by Claude Lorraine. Cuyp may, with great propriety, be styled the Dutch Claude. It does not appear that Cuyp ever quitted his native country; he was consequently a stranger to the romantic scene of the more southern climates, and, therefore it is no wonder that his genius was solely confined to the representation of... such objects as the country in which he lived afforded.33

Remarkably, the author realized that Cuyp did not journey to Italy. The passage also introduces two commonplaces: Cuyp as the Dutch rival of Claude and as a master of misty sunlight. Criticism for the next century and a half did not significantly expand these perceptions. The Boydell commentary (like other eighteenth-century English accounts) also brags about the British discovery of Cuyp:

It is astonishing, that the works of so great a master as Cuyp should have been almost totally unknown, or disregarded, till within the last twenty years. That his merit should have been overlooked by his countrymen is not at all surprising. The boldness of his pencil, and the freedom of his touches were not calculated to please a people who have been accustomed to the exquisite finishings of the most laborious class of artists that the world has produced; but that pictures of such extraordinary merit should have so long escaped the attention of collectors of other nations... appears incredible... It is entirely owing to the taste of the British nation, that his pictures have been retrieved from obscurity, their value enhanced, and places allotted them in some of the first Collections in this kingdom.34
Despite this testimony, it is not certain that Cuyp was as popular in 1769 as Boydell implies, since some decades passed before his paintings began to bring good prices at auction. The painting owned by the third earl of Bute was largely known through the reproduction in Boydell’s volume.15

Paintings by Cuyp became especially popular during the English Regency. Noel Joseph Desenfans (1745–1807), the dealer whose collection became the basis of the Dulwich Picture Gallery, owned at least ten works by Aelbert Cuyp. Desenfans assembled a collection of paintings for Stanislaw Augustus, king of Poland, but after the fall of Poland in 1795, Desenfans was left with hundreds of paintings that he tried unsuccessfully to sell to the Russian czar and to the British government as a national gallery.16 One of Desenfans’ most precious paintings by Cuyp was sold to J.J. Martin for 350 guineas (cat. 42), and the remainder of the collection was put up for sale. In the face of much criticism, however, nearly all the paintings remained unsold.17 The Prince Regent (later George IV) was one of the most important collectors of Cuyp’s work (perhaps second only to Johan van der Linden van Slingeland). He owned at least five genuine landscapes (for example, cat. 44 and Gor- denker essay, fig. 8), which were installed at Carlton House along with an impressive collection of Dutch pictures and more modern works by Joshua Reynolds, Thomas Gainsborough, George Stubbs, David Wilkie, and J.M.W. Turner. In the early decades of the 1800s, a new breed of English collectors began to buy Dutch pictures. These amateurs were usually untitled (at least at first), resident in London, active in banking or commerce, and often involved in politics as well. Sir Abraham Hume, Bt., caused a stir by paying the unheard of price of £1,200 for The Maas at Dordrecht (see cat. 28). Abraham Wildy Robarts, M.P., bought two notable pendant cattle pieces (cats. 22, 23) for his London residence.

Old Masters, Modern Painters

The escalating market for old masters engendered antagonisms between living artists and collectors of traditional paintings, who were often viewed as conservative and tasteless. These tensions came to a head with the foundation of the British Institution, which held the first of a series of old master exhibitions in London in 1815.18 The institution’s mission was to create a national gallery, and the avowed purpose of these exhibitions was to properly instruct modern painters through the example of old masters. Reaction from artists was swift and overwhelmingly negative. Thomas Lawrence muttered, “I suppose they think we want teaching,” while Augustus Wall Callcott complained that the institution had “set up a body of amateurs as critics for the people.”19 Even William Hazlitt, who generally supported such exhibitions, considered most of the lenders shameless self-promoters.20

The British Institution’s exhibition of 1815 assembled a notable group of Dutch and Flemish pictures, including twelve works attributed to Aelbert Cuyp (see cats. 25, 28, 35, 38, 43). While engendering controversy, the show (as the first in a line of annual shows that extended almost a hundred years) can be reckoned the forerunner of the modern museum loan exhibition. A parody of the exhibition, entitled A Catalogue Raisonné of the British Institution Exhibition, offered extensive commentaries on the exhibited pictures.21 For example, one of the institution’s directors, Sir Abraham Hume, was attacked for unethical behavior because his expensive seapiece by Cuyp (cat. 28) was placed on view. The quality of the exhibited pictures was found to be inferior to works by living British painters. Cuyp did not escape criticism: one work (cat. 43) was judged much too brown; another (cat. 25), muddy; the ice scene at Woburn Abbey, poorly drawn; and the fleet at Dordrecht (cat. 28), clumsy and in poor condition.
The most entertaining contribution to this debate was surely Henry Richter’s pamphlet, Day-light; A recent discovery in the art of painting; with hints on the philosophy of the fine arts, and on that of the human mind, as first dissected by Emanuel Kant, which first appeared in 1816. The text is based on the conceit that on the last day of the exhibition, the ghosts of the artists themselves suddenly appear. The old masters are taken to task for having failed to observe nature and record the effects of sunlight. Cuyp is asked what pigments he used for grass. “A mixture of black and yellow, to be sure, said Cuyp, at which we all burst out a-laughing.” The ghost of Cuyp also states that the foregrounds of landscapes should always be black. The aerial perspective so often praised in Cuyp’s art is also ridiculed. Finally, Cuyp is made to see the errors of his art and, being the old master most interested in sunlight, proposes a solution:

My plan is this: That THE DIRECTORS of this very INSTITUTION should form a COLLECTION of genuine studies of light and colour, taken faithfully from Nature itself, out of doors, under all its various aspects, forming a valuable SCHOOL for the study of COLOURING in which the public as well as the artists, might educate themselves in the knowledge of Nature. The works of us ancients, which, in their present dirty and doctored condition, I own I am not a little ashamed of.

“Bravo, Cuyp, bravol” shouted every one.

Artists and Apologists
Beginning with Richard Wilson (1713 – 1782), British landscape painters have had a special affection for Cuyp’s work. Wilson not only praised Cuyp, but seems to have been influenced by his pictures as well; both artists brought the glow of Italian sunlight to their native lands. Other British artists, such as Thomas Gainsborough (1727 – 1788), borrowed occasionally from Aelbert Cuyp’s paintings. John Constable (1776 – 1837) was impressed by Cuyp’s stormiest landscape (cat. 12, fig. 1), calling it “a truly sublime Cuyp, a tempest, still mild, & tranquil.” Full of dark clouds and dramatic lightning, Cuyp’s picture appealed to Constable’s rather vague concept of the landscape chiaroscuro, which seemed to denote not just formal lighting schemes, but also the sense of morality and passion stirred by nature. Constable picked out Jacob van Ruisdael (1628/1629 – 1682) and Cuyp as having this special trait: “Chiarosuro is by no means confined to dark pictures; the works of Cuyp, though generally light, are full of it…It is the power which creates space.” Cuyp escaped the attacks that Constable directed at other Dutch Italianate landscapists, like Jan Both (d. 1652) and Claes Berchem (1620 – 1683), “who by an incongruous mixture of Dutch and Italian taste, produced a bastard style of landscape, destirute of the real excellence of either.”

Did Constable not see the hybrid nature of Cuyp’s landscapes, or was he unfamiliar with Cuyp’s later, more obviously Italian pictures? Others shared Constable’s sentiments; Anna Jameson wrote “to come upon one of Cuyp’s pictures after looking at Berghem and Both is like opening a door and stepping out into the fresh air — into heaven’s own light and earth’s own verdure.”

J.M.W. Turner (1775 – 1851) paid explicit homage to Cuyp in a painting entitled The Dort Packet-Boat from Rotterdam Becalm, or Dort, which was exhibited at the Royal Academy in 1818 (fig. 8). The previous year, Turner had visited Dordrecht and made numerous sketches of the city, including one close in composition to the final painting. But Turner’s Dort seems less dependent on topography than on Cuyp’s art. Although Dordrecht had changed little from the seventeenth century, it was Cuyp’s association with the town that stirred Turner’s imagination. When Turner returned to Holland in 1825, he scribbled Cuyp’s name on several sketches,
almost as a title or characterization of the composition or the coloring of the scene. On one drawing, Turner enthused, “Quite a Cyp.”

Turner’s Dort emulates the light and compositional structure of Cuyp’s paintings, particularly The Maas at Dordrecht (see cat. 28), which he had seen at the 1815 exhibition. Cuyp’s picture had been such a controversial part of the British Institution exhibition that Turner must have been motivated both to rival it and to pay tribute to it. Ironically, John Ruskin, Turner’s most fervent defender, complained that Turner’s painting was little more than a pastiche: “Very fine in distant effect — but a mere amplification of Cuyp: the boat with figures almost copied from him. But the water, much more detailed, is not at all as like water as Cuyp’s: there are far more streaks and spots on it than can properly be accounted for.”

Turner’s close colleague, Augustus Wall Callcott, may have provided an intermediate step between Cuyp and Turner. Callcott’s Entrance to the Pool of London (fig. 9), exhibited at the Royal Academy in 1816, is even closer in composition to Cuyp’s painting and appears in turn to have influenced Turner. Callcott’s painting was commissioned by the third marquess of Lansdowne, who also bought Cuyp’s very similar view of Dordrecht now in Kenwood (cat. 36). Walter Fawkes of Farnley Hall in Yorkshire, a devoted patron of Turner, owned an equestrian landscape by Cuyp (cat. 17). That collectors who favored Aelbert Cuyp also acquired the gilded landscapes of Turner and Callcott is no coincidence.

Attacks on Cuyp’s art frequently came from critics who had a special connection with Turner. John Ruskin’s 1843 treatise Modern Painters: Their Superiority in the Art of Landscape to all the Ancient Masters is a lengthy encomium to Turner. Since much of his book is highly polemical and almost comically overstated, it is important to realize that Ruskin believed that Cuyp was a great painter, simply one inferior to Turner.
Of pastoral or Georgic landscape, one of the four orders of landscape, Ruskin wrote, “Its principal master is Cuyp.” 50 Ruskin therefore ranked Cuyp alongside Titian, Claude Lorrain, and Nicolas Poussin, above other famous landscape painters, and far higher than the masters of genres Ruskin considered inferior (these included Canaletto, Berchem, and Wouwermans). Of course, for Ruskin, the supreme landscapist was Turner:

For the expression of effects of yellow sunlight, paints might be chosen out of the good pictures of Cuyp, which have never been equaled in art. But I much doubt if there be a single bright Cuyp in the world, which, taken as a whole, does not present many glaring solecisms in tone. I have seen many fine pictures of his, which were not utterly spoiled by the vermillion dress of some principal figure, a vermilion totally unaffected and unwarmed by the golden hue of the rest of the picture. 51

American painters were occasionally influenced by Cuyp's work. The early landscapist Thomas Doughty (1793–1856) painted a copy of the river landscape then attributed to Cuyp (but probably by Abraham van Calraet) in the National Gallery, London.52 Doughty's own pictures of cattle were compared to Cuyp's; a reviewer referred to Doughty's cattle pictures as containing 'the Doughty-stock produced at Philadelphia by breeding in-and-in with the Cuyp-stock, and showing them off in a Cuyp-atmosphere.”53 Fitz Hugh Lane (1804–1865) appears to have been strongly affected by Cuyp's work, which he probably knew through copies and prints. In several of his early paintings, Lane borrowed compositions and motifs from Cuyp's early work.54

It is tempting to believe that American landscapists were attracted to Cuyp's paintings because their sweeping vistas, clear skies, and golden sunsets evoked the American countryside. American artists themselves left little testimony to this affinity, but Frans Trollope, that haughty English observer of American manners in the 1820s, was struck by how closely the American countryside resembled pictures by Cuyp. The clarity and brightness of the Ohio autumn were beyond anything she had encountered in England:

Cuyp's clearest landscapes have an atmosphere that approaches nearer to that of America than any I remember on canvas; but even Cuyp's air cannot reach the lungs, and, therefore, can only give an idea of half the enjoyment.55

A Country House Artist
The collecting of Cuyp's paintings is an essentially English phenomenon. More works by Cuyp are found in Britain than in any other country, and most of those found elsewhere have spent a considerable portion of their history in British collections. Cuyp is the quintessential country house artist. His elegant landscapes, so often filled with aristocratic riders (their status made clear by attending servants and nearby peasants), perfectly confirmed the self-importance of nineteenth-century British noblemen, who typically accumulated titles apace with wealth and land. As one critic claimed, Cuyp's paintings specifically "appealed to a stock-breeding nobility."56

The nineteenth-century landed gentry typically collected large equestrian paintings by Cuyp, as can be seen in the purchases of John Cator, who lived in Kent (cat. 37), the duke of Buckingham at Stowe (cat. 30), Edward Loyd (Gordenker essay, fig. 7), the earl of Hopetoun (cat. 39), and Edmund Higginson of Saltmarsh, who collected numerous Cuyp works with an equestrian theme. Ferdinand de Rothschild, a member of the Austrian branch of the family who settled in England, acquired
five pictures attributed to Aelbert Cuyp within the space of a few years around 1890 in order to furnish his newly built country estate, Waddesdon Manor. The extravagant Alfred de Rothschild bought three fine late paintings by Cuyp. The French Rothschilds acquired most of their numerous paintings by Cuyp on the English art market. Alphonse de Rothschild installed several works (cats. 3, 34) in the mansion Ferrières outside Paris. His son Edouard inherited them and added an equestrian scene with ruins (cat. 39). Gustave de Rothschild purchased the Baptism of the Eunuch (cat. 30) and an impressive cattle picture.

The favor that American collectors and museums have shown for Cuyp in the twentieth century can be regarded as an extension of English taste. In general, the American collecting of old masters is closely bound up with British traditions. Genuine paintings by Cuyp do not seem to have entered the United States until the last decade of the nineteenth century, although several copies and school works are recorded. The situation changed suddenly about 1900, as wealthy industrialists such as John G. Johnson, Peter Widener, Henry Clay Frick, and Andrew W. Mellon began to collect. While America’s own landscapists of the nineteenth century approached the grandeur and tonality of Cuyp, the prestige of Cuyp as a collectible artist attracted the richest buyers. The imitation of the British aristocracy at the turn of the century is best exemplified by Peter Widener, whose Lynnewood Hall outside Philadelphia was an American version of the English country house. Widener purchased two late Cuyp paintings with very similar moods and almost identical backgrounds. And his double equestrian portrait (cat. 40), purchased in 1894, was the first mature Cuyp to come to America. The Irish writer Shane Leslie, on viewing Widener’s Cuyps, was struck by their appropriateness in an American collection.

A few conclusions can be drawn concerning the collecting of Aelbert Cuyp’s pictures. Compared to other Dutch painters, Cuyp was discovered rather late, but once his collectability was established, the flight of his paintings from Holland was immediate and total. By 1800, no significant works by Aelbert remained in his homeland, a record shared by no other major Dutch painter. Equally remarkable is the concentration of his major paintings in England. No other Dutch artist was represented so strongly there and so sparsely in other European nations otherwise enamored of Dutch pictures. Was it mere circumstance that brought so many Cuyp paintings to England? Or did his works simply find a well-timed marketing niche? Cuyp’s popularity in England is best compared with the collecting of Claude, that essential ingredient in the English country house. And who is a more perfect country house artist than Cuyp?

His unthreatening naturalism — polish without demanding intellectual fuss — provided a satisfying confirmation of status, property, and seigneurial authority. In the seventeenth century, Cuyp’s landscapes and equestrian portraits were created for the newly wealthy in Dordrecht. Both artist and patron belonged to the conservative royalist faction aligned against the parliamentary forces in the Netherlands. How remarkable that this taste could have been translated almost unedited to Regency Britain and to American industrialist collectors around 1900.

2. The 1880 inventory of the Huis te Meerdervoort, Zwijndrecht, lists ‘int kind camrerie d’heer Cautier te peert met 2 jonckers en Willemen de koetsier, voor de schoorsteene.’ The Hague 1933, 89.

4. The Pompe van Meerdervoort family also owned Cuyp’s Conversion of Saul (cat. 16).

6. Although De Beveren claimed noble status, foreign knighthoods did not confer title or privilege in the Netherlands, nor was the Dutch nobility inclined to recognize such honors (see Van Nierop 1993, 24 – 25). Stephen Reiss believed that the sons of Cornelis de Beveren might be depicted in the painting in the Barber Institute (Gordenker essay, fig. 7) because a fleur-de-lis appears on a saddle cloth (Reiss 1975, 113, 162). This is insufficient evidence since fleurs-de-lis were a common armorial symbol.

9. Jan van der Eyck, Carte bescribinghe mitgaders handewetten, privilegien, costumen ende ordonantien vanden Lande van Zuyt-Hollandt (Dordrecht, 1628), 426 – 430 (‘Ordonnatie vande Jachte’), esp. 428; ‘te moghen vlieghen ofthen jaghen, soo}

10. Jacht) sullen de Edel-luyden, Andraeh-critton, ende goede Luyden, ofte Borgers binnen Dordrecht en in Zuyt-Hollandt geseten ende woonachthgh, die ghegoet sullen zijn ter somme van honder Carolus Gulden [jaers vry incomende, en niemands anders] (allowed to hawk or hunt, so shall noblemen, estate owners, and good folk or citizens of Dordrecht and of Zuid Holland and living therein who have the income of a hundred Carolus guilders, and no one else).

11. Reiss (1975, 186, no. 141) attributed the work to Cuyp’s studio, but there is no reason to doubt Cuyp’s authorship.

12. There were three fish smokehouses at Hardinxveld, and fishing was important enough to involve Pieter de Roovere in litigation with the neighboring estate of Houweninge (see Dordrecht 1977, 78). Pieter de Roovere’s son-in-law Samuel Everwijn later became salmon inspector (Measured of the sea) in 1678; Matthijs Balen, Dag-lyte (Dordrecht, 1678).

15. The 1682 inventory of Sophia van Beveren lists in the Voersad (front salon) ‘Een koestel, van Cuyp’ (a castle stall by Cuyp); in the Blau kantoor (blue office), ‘Een bond paert, van Cuyp’ (a spotted horse by Cuyp); in the Boven ather kamer (upper back room), ‘een soldaat van Cuyp’ (a soldier by Cuyp); and ‘een landschap van Cuyp’ (a landscape by Cuyp).

16. The identification of the sisters is based on a later portrait explicitly identified as Adriaen Snouck, which is clearly a copy of the man in Cuyp’s portrait, with the facial features made somewhat older. This work is in the Snouck-Hurgronje collection, Zeeuwus Museum, Middelburg. Its pendant portrait, identified as Erkenraad Berk, is also based on the Washington portrait. It was common practice to copy portraits so that family members could own images of ancestors.

17. A civic guard portrait made in Dordrecht, attributed to Cornelis Bisschop, and datable to about 1675, shows a council of eleven civic companies (Rijksdienst Beeldende Kunst, on loan to the Dordrechtse Museum; Rijksmuseum 1976, repro. on 118). Other group portraits by Jacob Cuyp and Paulus Leire once hung in the Kloonivers Doelen, but are now lost (Balen 1673, 666).

20. In a 1699 inventory, “2 grootte stucken van kuypt / 2 idem lantschapts / idem huys te merwede.” These consecutive entries are the only occasions when “idem” is used, therefore they probably refer to paintings by Cuyp: Gemeente Archief Dordrecht, ONA 123, no. 11, f. 5v.
21. Aelbert Cuyp painted a portrait of Jacob Trip in 1652 (private collection, Amsterdam), finishing a commission for several pairs of portraits of Trip and his wife begun by Jacob Cuyp.

22. Dordrecht's wealthy merchants, who typically left estates of 10,000 to 50,000 guilders, seemed to have been especially fond of Cuyp. In 1674, Pietercella Palm and Jacob van der Radt owned five landscapes by Aelbert Cuyp and several others by the Cuyp family. In 1688, Abraham Sam, a wine merchant, had at least four landscapes by Aelbert Cuyp, plus two group portraits attributed variously to Jacob or Aelbert Cuyp.

24. In a 1673 inventory of Anthonetta van Bourhem (also van Haerlem), widow of Arent Dichters (merchant), "een groote schilderij waerende een legjer ofte Rendezou van schepen leggende voor Nummegen, gemaakte door Aelbert Cuyp" (a large painting depicting a fleet or rendezvous of ships lying before Nijmegen by Aelbert Cuyp). Dordrechts Archives, ONA 157, f.195v. valued at 80 guilders. For further details on collectors in Dordrecht, see Chong 1993 and Loughman 1993.

25. Aelbert Cuyp's name appears in print only a handful of times in his own lifetime, namely in Matthijs Balen's Dagboe (a city almanac published annually after 1673) and in the same author's extensive history of Dordrecht (Balen 1677, 186, 909), which briefly lists Cuyp's civic positions. Although Balen described two paintings by Jacob Cuyp, he did not mention any works by Aelbert, nor indeed the younger Cuyp's profession as a painter. Only the will of Cuyp's wife refers to works that Aelbert Cuyp painted as part of her estate.

26. Houbraken 1718–1721 (1753 ed.), i: 248–249: "de Pijkeurbaan, daar hy dan de schilderagtigste Paarden die daar goewoonlik kwamen, in te pas bragt, zoo dat men deel kast onderkennen." (the Pijkeurbaan, in which he depicted the most picturesque horses that usually came there, so that one could recognize them).

27. Houbraken 1718–1721 (1753 ed.), i: 1248, "Daarenboven heeft hy inzonderheid wel in agt genomen de tydstroeden waar in hy de voorwerpen verbeerd, zoo dat men den benevelden morgenstond van de klaren middag, en dezen weer van den saffaanverwten avondstond in zyn taferelen kast onderscheidt."

28. Recorded by Hoet 1752, ii: 489–500; Descamps 1753–1765, ii: 80. See also the auction catalogue of 22 August 1786.

29. Except for the presence of so many paintings by Cuyp, the collector's favorite painter, the collection is typical of eighteenth-century tastes and includes no other Dordrecht artists active in the middle of the 1600s except for a single work by Samuel van Hoogstraten. Among the Dordrecht paintings from about 1700 are three by Arnold Houbraken, two by Godfried Schalcken, and one by Arent de Gelder.

30. London auctions in the 1690s contain numerous Dutch landscapes by Cornelis van Poelenburgh, Claes Berchem, Anthonie Waterloo, Herman Saftleven, Paulus Bril, Egbert van der Poel, Pieter Lastman, Herman van Swanenvelt, Roelandt Savery, Jan Porcellis, Simon de Vlieger, Philips Wouwermans, Esaias van de Velde, Jan Griffier, Pieter van Laer, and Jan van der Capelle.

The earliest sale references to Cuyp may be Edmund Glover sale, London, 16 March 1741 (58) "A Lanskip and Carve, by Cuyp" £1.2; (day 3, lot 115) "A Sea-port, by Cuyp" £1.19 (copy of catalogue in British Library); Maria Droevendaal (widow of Thomas Parker) sale, Leiden 29 April 1743 (13) "Een Lanschap met Beejes en Beelden, door A. Kuyp" fl. 5.5.

An earlier reference might be in the Droste sale, The Hague, 21 July 1734 (47) "Een Pleyster-plaats, door Aelbert Knip, 48 x 67 duim." This may be a misspelling of "Kuyp."

33. Boydell 1769, 12 (plate 12 is the Cuyp painting). Benjamin Ralph and Edward Penny were probably the authors of the texts in the volume.

34. Boydell 1769, 11, pl. 12. About 1790, several other commentators described how Cuyp had been discovered, including Samuel Ireland, A Picturesque Tour through Holland, Brabant, and Part of France (Autumn 1789) (London, 1790), 44: "Valuable as this great artist's works are now held by the connoisseur, I am informed it is not more than thirty years since a room full of his best cabinet pictures were purchased by the late Mr. Blackwood, for seven or eight pounds a picture"; Desenfans 1801, 164: Cuyp's pictures were in the private houses of the Hollanders, covered with filth, not considered as cabinet pictures, but merely fit to supply the place of furniture, till at length, sometime about 1740, a native of Switzerland called Grand Jean, who resided in London, but made frequent excursions to Holland, for the purpose of selling watches and accisars of English manufacture, returned with ten or twelve landscapes of Cuyp. His speculation was attended with every success... It was reserved to the English nation, to have the merit of bringing them to light, and to give his works the high reputation they are now held in."

35. An unpopular prime minister, Lord Bute was forced from public life because it was believed that he had had an affair with the king's mother, Princess Augusta, and had used public funds on his houses. As a result, very few connoisseurs were admitted to Luton Hoo.

37. See Washington and Los Angeles 1985, 13–17. The catalogue of the exhibition sale is Desenfans 1802; the sale took place on 18 March 1802.
38. See Peter Fullerton, “Patronage and Pedagogy: The British Institution in the Early Nineteenth Century,” Art History 5 (1982), 59–71; Gregory Martin, “Birth of the British Institution,” Country Life 151 (1972), 186–188; Thomas Smith, Recollections of the British Institution (London, 1860). The institution’s papers are now in the Victoria and Albert Museum library. Farington 1978–1984, vol. 12, provides an account of the setting up of the organization. Founded in 1805, the British Institution held annual exhibitions of British painting (as did the Royal Academy), and, from 1815, old master shows as well. The first old master exhibition in the British Isles was held in Dublin in 1814.
39. Lawrence’s comment is reported by Benjamin Haydon (Whitley 1928, i: 247), while Callcott’s, made in 1813, is given in Farington 1978, 12: 4332.
41. The British Library attributes the Catalogue Raisonné to the artist Robert Smirke, based upon Memorials and Recollections of Abraham Raimbach, ed. M. Raimbach (London, 1843), 35. However, Smirke, who thought it must be by a supporter of Lord Egremont, a patron of contemporary artists including Turner, suggested Thomas Phillips. Farington approached Phillips, who assigned it to Fawkes (Farington 1978–1984, 13: 4643, 4645, 4650 [June 1815]). Although the identity of the author is uncertain, it may have been Walter Fawkes of Farnley Hall, Yorkshire, a friend and patron of Turner.
42. Richter 1817.
43. Richter 1817, 10.
47. The closest sketch is in the 1817 sketchbook, no. CLIX, page 50; see London 1994, 42–43, fig. 9b. Joll connects it with sketchbook CLIXa, page 59; Butlin and Joll 1984, 103. There are several more drawings of Dordrecht in the 1817 sketchbook (“Dortt”) no. CLXII, pages 77, 77a, 85–88, 89, 92, and inside the covers. The annotation “Cuyp” or “Cyp” appears in the 1825 sketchbook “Holland” no. CCXV, pages 60v, 117v, 131. The sketchbooks are in the Turner Bequest, Tate Gallery, London, and are catalogued by A. J. Finberg, A Complete Inventory of the Drawings of Turner Bequest, 2 vols. (London, 1909).
48. Ruskin was writing in 1851; see Butlin and Joll 1984, no. 137. In Modern Painters, Ruskin found Cyp’s inferior to Turner except in certain details: “Now, there is no instance in the works of Turner of anything so faithful and immediate of sunshine as the best parts of Cyp; but, at the same time, there is not a single vestige of the same kind of solecism” (Ruskin 1903–1912, 3: 272–273).
49. See David B. Brown, Augustus Wall Callcott [ed. cat., Tate Gallery] (London, 1981), 26, 36–37, no. 15. Much of Callcott’s work, including a lost marine of 1815, views of Rotterdam done in 1819, and several pastoral scenes, was directly dependent on Cyp’s compositions.
54. John Wilmot, Paintings by Fitz Hugh Lane [ed. cat., National Gallery of Art] (Washington, 1988), nos. 1, 9, repro. A later work of 1853, Entrance on Soman Sound, is so close to Cyp’s view of Dordrecht then in the marquess of Lansdowne’s collection that Lane must have seen a reproduction of the picture. Lane’s overall composition is very similar to Cyp’s, as is Lane’s depiction of the principal ship near a raft of timber.
55. Frances Trollope, Domestic Manners of the Americans (London, 1832), 146 (chapter 10).
57. Paintings attributed to Cyp were exhibited in America as early as 1817, when a painting described as “An Old Man, for sale” was shown at the American Academy of the Fine Arts, New York; the subject is more typical of Benjamin Cyp than of Aelbert. At the same venue, works attributed to Cyp appeared in 1831 (“Landscape, with Cattle”), 1832 (“Cattle”), and 1838 (“Landscape with Cow and Figure, lent by W. Hall”). In 1831, Doggett’s Repository of Art exhibited a “Landscape and Cattle” and “The Cottage Door, with the painter in the character of a peasant,” both for sale. The Peale Museum in Baltimore, about 1831, showed a “View on the banks of a river” that was owned by F. Cook. As early as 1817, Robert Gilmor Jr., the noted Baltimore collector, purchased a picture attributed to Cyp at a London auction.
Just as Aelbert Cuyp introduced golden, Mediterranean sunlight into recognizably Dutch landscapes to give them a dreamy, pastoral quality, he used exotic costumes to lend his figures a rich and foreign appearance, often combining Eastern and Western elements in a unique amalgam. In or about 1653, Cuyp painted two boys from the wealthy Pompe van Meerdervoort family with their tutor on horseback, accompanied by their coachman on foot (cat. 29). The portrait presents the group setting off for a day’s sport. The figures in the foreground are luxuriously and colorfully dressed in garb that is by no means ordinary riding attire. The horsemen wear loose, knee-length garments of richly colored velvet, closed with gold braid and buttons at the front, and tied at the waist with a sash. The coachman sports a dark red coat of bulkier proportion, in a coarser fabric with broader braiding ending in fuzzy tufts. Three of the figures have identical swords at their sides, with a honeycomb pattern on the hilt, a pommel in the form of an animal head, a swept-back blade, and a scabbard ending in a square tip.

These costumes have variously been described as outlandish, of Persian influence, or arcadian, but they have not been firmly identified to date. Nevertheless, they are certainly eastern European, most probably Hungarian, in origin. While similar in cut and construction to the clothing worn in other eastern European countries, particularly in Poland, a distinctly Hungarian male costume developed during the sixteenth and seventeenth centuries. Hungarian dress combined Western with Oriental elements derived from Ottoman garments brought to Hungary by the Turks. Contemporary Hungarian paintings and western European prints illustrating national costumes show how Hungarian dress looked and was worn (fig. 1).

Hungarians wore two shirts, one under the other. The under shirt, of undecorated linen, did not show. But the over shirt, short and cut

1 Hungarian, Portrait of Prince Géza, 17th century, Magyar Nemzeti Múzeum, Budapest, Történelmi Képtárknek
square, with long, wide sleeves and silk and metal-thread embroidery decorating the hem, was intended to be seen from beneath the outer clothing. A garment called the dolman was worn over the shirts. This tightly fitting coat was cut straight to the waist, flaring at the side seams to form a full skirt, and overlapping right over left from waist to hemline. Winter dolmans were made of heavy silk, velvet, or broadcloth, while in the summer, lighter weight linens or silks were preferred. The dolman fastened down the front to the waist, sometimes with elaborate clasps or buttons. It varied in length, but in the seventeenth century was generally short, reaching halfway down the thigh. The fashion for the collar in the seventeenth century was narrow and upright. The sleeves varied in cut, but extended to the wrist. Belts were usually colorful silk net shawls, wrapped around the waist several times. Over the dolman, Hungarians wore a mente (fig. 2). Similar in material, this was a loosely cut coat reaching to the calf. The front was fastened with large buttons (knit, metal, or precious stone) and often decorated further with braids made of metal thread or silk yarn. Hungarian trousers, usually made of broadcloth and relatively simple in style, were worn tight to the legs. Brightly colored boots with an arched front were pulled up over the kneecap. The most popular headgear was a high cap with a turned-back brim; made of felt or fur, the cap was often lined with fur and frequently adorned with feathers.

In Cuyp’s portrait, the two boys and their tutor wear Hungarian dolmans, complete with net sashes and elaborate shirts underneath. The coachman Willem, on the other hand, appears in a mente. The decoration, the shorter sleeves, and the fuller silhouette mark his coat as the outer garment that was intended to be worn over the dolman.

Why would Cuyp have chosen Hungarian dress? Perhaps he was not aware of the precise origin of the costume he used in the Pompe van Meerdervoort hunting portrait and simply considered it Eastern or Polish. Polish costume was well known in the Netherlands, and is frequently mentioned in literature, inventories, and in descriptions of paintings. Since Hungarian dress was the dominant model for the fashions of other central European countries, the differences between it and Polish costume could be subtle and were often confused. Even foreign travelers of the time noted the similarities between Hungarian and Polish dress. Nevertheless, Western printmakers seem to have made some effort to distinguish the costumes. Johann Wilhelm Baur (1607–1641) showed the contrast between Polish and Hungarian national attire in one of a series of prints depicting national military costumes (fig. 3). While not without fanciful elements, the print distinguishes Polish garb (with its simpler decoration and longer silhouette) from Hungarian costume.

Jacques Callot, Man in Hungerline, 1623, Bibliothèque Nationale de France, Paris, Cabinet des Estampes

Jaco b Gerritsz Cuyp, Portrait of Michiel Pompe van Slingeland, 1649, Dordrechts Museum, on loan from the Rijksdienst Beeldenden Kunsten

Stefano della Bella (1610–1664), in his series of prints showing equestrians in exotic dress, brought out the same difference.

While the various forms in eastern European costume were — and still are — confusing, Hungarian dress certainly had made its impact on western European fashions in Cuyp’s day. The term Hungerline (hongreline in French; hongerlijn in Dutch), clearly derived from the name Hungary, was commonly used to describe a thigh-length overcoat. The man’s version had a flared skirt and buttoned down the front from a high, turned-over collar to a shaped waist (fig. 4). It was often made of colored velvet, almost always lined with fur, and frequently decorated on the chest with rows of silver or gold braiding. Encountered exclusively in the possession of aristocratic military men, the Hungerline seems to have been a valuable garment with martial overtones.

Hungarian dress suited Cuyp’s hunting portraits for other reasons. The Dutch undoubtedly recognized the Hungarians for their equestrian prowess and for their cavalry. As accomplished horsemen, Hungarians were also hunters of great skill. Indeed, Hungary had been a hunters’ paradise in the Middle Ages and had played a definitive role in the development of hunting techniques. Furthermore, Hungarians were known in the Netherlands as staunch fighters for the Protestant cause. Eastern Europe was engaged in a continuous battle to establish the fluid borders of its countries, and Hungary in particular was fighting fiercely against the Turks. By the end of the sixteenth century, 90 percent of the Hungarian population was following the Protestant creed. And Hungarian students were numerous in Dutch universities, where most of them studied theology. These students would have brought to the Dutch an awareness of their bitter fight to defend the Protestant faith, as well as perhaps a taste for their clothing.

In the Netherlands, heroic images of hunting on horseback with imposing figures in exotic or antiquated dress had a long and distinguished visual history. Fifteenth- and sixteenth-century tapestries such as those by Bernard van Orley (c. 1488–1541), engravings after designs by Jan van der Straet or Stradanus (1523–1605), prints by Antonio Tempesta (1555–1630), as well as Peter Paul Rubens’ (1577–1640) muscular hunt scenes, all incorporate unusual dress. Stradanus used Oriental dress, while Rubens, in his wolf and fox hunts, used antiquated costumes to evoke the courtly hunting scene and to underscore the continuity of the noble privilege of hunting. In Dutch hunting portraits, too, exotic dress
was entirely appropriate. Cuyp’s father, Jacob Gerritsz Cuyp (1594–1652), painted Michiel Pompe van Slingeland (1643–1685), the cousin of the Pompe van Meerdervoort boys, wearing a red velvet tunic, probably of Turkish origin, antique sandals, and a sixteenth-century bonnet (fig. 5). Entirely unsuited to hunting, this type of dress was chosen more for its eroticism and theatricality than for its accuracy.22

As one of the most prominent families in Dordrecht, the Pompe van Meerdervoorts must have sought an image that would emphasize their social status and link them to the aristocracy and royalty. While hunting imagery — from still lifes to scenes of peasant hunters — did not necessarily connote nobility in the Netherlands, the equestrian hunt was associated with the stadtholder and his court.23 Portraits of the royal family on horseback setting out for a hunt are numerous.24 By choosing a hunting image, the Pompe van Meerdervoorts made a reference to royal equestrian portraits. The colorful Hungarian dress increased the richness of the image and implied a link to exotic hunters in pursuit of large game, such as those painted by Rubens and Stradanus. Furthermore, the costumes (whether understood as Hungarian or Polish) may well have rung with the moral justice of the fight against the Turkish infidels and with the prowess of eastern European horsemen and hunters.

Variations on a Theme
The Pompe van Meerdervoort boys, their tutor, and coachman wore Hungarian garments but were not entirely dressed as Hungarians. Their boots with heels and spurs are typical for western Europe at this date. The headgear is incongruous with the dolmans. The youngest boy, Cornelis, has a cap with a distinctly Eastern flavor that resembles a Turkish turban. His older brother, Michiel, sports a sixteenth-century European bonnet adorned with a chain and feather.25 The tutor Caulier’s fur-trimmed cap more closely resembles those of the Hungarians, but is less sharply peaked in form and also comes close to the type worn by the Dutch in the winter.26

The sword, which appears three times in this portrait, is a fanciful hybrid. It was probably an actual object — a fanciful western European interpretation of Eastern or antique armor. The head-shaped pommel and horizontally placed quillons bear some resemblance to Hungarian cavalry swords (fig. 1).27 The falchion (swept-back) blade and scabbard also lend the object an Eastern flavor. Yet the pommel and patterned grip are extremely similar to a hilt of circa 1630–1650 affixed to a German saber of circa 1540 (fig. 6). While not unlike a functional “hunting hanger,” this object was probably more for show than actual use. Swords of this type were also looked on as typical of classical times. They appear in Netherlandish history paintings along with classical armor.28 And Michiel Pompe van Slingeland appears to wear the same one in his portrait by Cuyp’s father (fig. 5).

Cuyp did not, therefore, present his sitters in an accurate and complete national costume. More likely, he had two or three garments in his studio that he used as a basis for his exotic equestrian costumes and that he supplemented with fantastic additions (details derived from prints), and with various accessories, regardless of their age or origin. We know that Rembrandt (1606–1669), his pupils, and other Dutch artists collected old clothing and various exotic articles for use in their studios.29 While these costumes frequently provided no more than a guide for the color and drape of a fabric, the recurrence of a specific motif or article of clothing is a good indicator that the artist owned and used a similar one in his studio.
Garments resembling the *dolmans* in the Pompe van Meerdervoort painting recur repeatedly, in various forms and variations, in almost all of Cuyp’s hunting scenes. The artist altered the garments in detail and combined them with various accessories from one painting to the next. In Cuyp’s other hunting scenes, such as *Equestrian Portrait of Pieter de Roovere* (see Chong essay, fig. 3), *Portrait of Two Men Hunting on Horseback* (private collection, Germany), *Horsemen Resting in a Landscape* (cat. 37), and *Horsemen and Herdsmen with Cattle* (cat. 38), similar knee-length garments of the same colors appear, sometimes fashioned with antiquated slashing or trimmed with fur and gold braiding. The hats in these pictures vary, from fur-lined caps to bonnets, with or without feathers. It is highly unlikely that all the men in Cuyp’s hunting portraits, regardless of whether they are known subjects or unidentified hunters, would have owned such similar and costly garments. One constant in these hunting scenes is the color of the attire. A small range of hues — a bright red, blue, or a more muted dark red or brown — always appears. Almost all the garments are of a similar shape and construction. And while the decoration differs from one to the next, it always incorporates Eastern motifs, such as gold braiding and fur trim. The headgear, too, while varied, frequently has an antiquated or Eastern flavor. And the same sword appears constantly. This suggests that Cuyp was deliberately basing himself on a few garments in his studio, to which he added trim and decoration for variation. The Pompe van Meerdervoorts might have had luxurious clothing, but they almost certainly did not select these costumes from their own wardrobes.

**Historicizing Dress**

While eastern European costume must have appealed to Cuyp and his patrons for its richness and for its association with accomplished horsemen and huntsmen, it also melded well with seventeenth-century notions of historical dress. Like Rembrandt and his pupils, Cuyp introduced this type of Eastern and antiquated costume into his hunting scenes in order to lend his images the gravitas of a history painting and to avoid the pitfalls of current fashions, which could look dated in a few years. In the pair of pendants showing a man and woman as hunters, Cuyp’s use of dress closely resembles that of Rembrandt and of Ferdinand Bol (1616–1680, a native of Dordrecht) (cats. 26, 27). The broad,
fleshy bonnet with its edge cut into square sections is of sixteenth-century origin. The gorget, accompanied both by sixteenth-century dress and by turbans and Eastern shawls, appeared frequently in tronies (bust-length figure studies, often featuring imaginative dress) by Rembrandt and his pupils. The slashed sleeves also derived from past styles. The pendant shows the hunter's wife in an adaptation of Eastern costume, which incorporates a low neckline decorated with a heavy brooch. A similarly fanciful mixture of costumes, both exotic and archaic, appears in Huntsmen Halted (fig. 7) and in his history paintings as well. In the Conversion of Saul (cat. 16) and the Baptism of the Eunuch (cat. 9), for instance, Cuyp combined Turkish caftans and turbans with sixteenth-century bonnets and indeterminate draperies, in very much the same way that Rembrandt and his pupils did.

It is striking that almost all the costumes worn by Cuyp's hunters, no matter how embellished or simple, center around knee-length garments, frequently belted, and decorated around the hems. Probably seen as antique and associated with eastern Europe, these garments also evoke the costumes worn in pastoral scenes. The pastoral ideal, which comes to the fore in Cuyp's carefully selected light and construction of landscape, is therefore mirrored in his choice of dress. The knee-length garment he favored in his equestrian portraits is in many ways similar to the shepherd's tunic. Such costumes are represented in the frontispieces of popular pastoral plays and poetry. Shepherds in comparable attire can be seen in illustrations to Dutch pastoral literature (see Wheelock essay, fig. 5) and in many Netherlandish pastoral portraits.

Riding Dress

While Cuyp's treatment of his hunters' costume was highly original, he represented more ordinary riding dress in other equestrian scenes. For riding, men wore doublets and breeches, as do the horsemen in most riding treatises. Garments specifically intended for riding also existed. Breeches and boots were worn under either the rock or rij-rock (riding coat) or the kabas or casaque (cassock). Both were loose coats that widened toward the hem (frequently with a vent or short slit in the back for comfort on the saddle) and fastened down the front. Such coats were made either of plain gray or red wool, which was sometimes decorated with braiding. The thigh-length coat was also appropriate for hunting.

In his Landscape with Horse Trainers, Cuyp depicted his horsemen in riding coats (cat. 39). In the right foreground, a man pointing his whip wears an elegant dark wool coat with large gold buttons at the sleeves and front opening. Combined with a short collar, riding boots, and a broad-brimmed hat with tall crown, his dress conforms perfectly to that of the 1650s. The other horsemen wear similar outfits, while the figures in Horsemen with a Black Page (Royal Collection, London) also wear clothes entirely fashionable for the date of the painting.

The equestrian portrait of a couple, probably Adriaen Stevensz Snouck (c. 1634–1671) and Erkenraad Berk (1638–1712), is particularly interesting for changes made in the dress (cat. 40). The portrait was begun shortly after the couple's marriage in 1654. X-rays show that Snouck originally wore the tall hat typical for that date, as well as a cape with braid decoration along the edges (see cat. 40, fig. 1). Erkenraad Berk wore a dress with a low décolletage encircled with a tours (broad neckerchief). Cuyp must have been asked to alter the clothing at some point after 1660, because the second version of the costume...
falls perfectly into line with the styles of the mid-1660s. Snouck now wears a rock in a rich brown wool. His bef (falling band), a collar in the form of a bib, is tied with tasseled band-strings. Over one shoulder is a bandoleer, a commonly worn decorative accessory embellished with gold fringe and a bunch of black ribbons at the shoulder. The biggest change occurred in his headgear and hairstyle: he wears not the broad-brimmed hat of the 1650s, but a full head of long curls, quite possibly a wig. Erkenraad now has a sumptuous blue velvet bodice with slit sleeves and matching skirt. Such long, boned bodices were fashionable in the 1660s, and a surviving example of this date has very similar sleeves. On her head is a small black cap decorated with blue ribbons and a luxuriant bunch of feathers. The horsemen and the figure on horseback in the background remain, however, in their coats and broad-brimmed hats of the 1650s.

Military men, or equestrians wishing to appear as such, frequently wore buff leather jerkins or coats. Made of a strong material with a full skirt that reached over the thigh, these garments had a protective function like metal armor. Several examples have survived. Cuyp did not depict the buff coat or jerkin in his portraits, but one does appear together with armor in a painting of a horseman standing with his gray dappled horse before a military encampment (fig. 8).

**Historical and Geographical Accuracy in Dress**

Although most of the costumes in Cuyp’s equestrian pictures may be identified, being overly precise about the origin and dates of the garments is actually counterproductive. As clearly shown by the theoretical literature of the time and by the bewildering combinations of garments that occur in the same image, historical and geographical accuracy in dress was not high on the list of an artist’s priorities. Cuyp’s portrait of a family before a Rhine town serves perfectly to illustrate this point (fig. 9). The figures, arranged in a stiff and uncomfortable grouping, are clad in a wide variety of costumes. Most of the adult men and women wear conservative and formal dress typical of the mid-1650s. The boy with the squirrel in the foreground is clad in an Orientalizing tunic with turban. The young girl next to him in the foreground wears a modified form of contemporary dress with sleeves slashed low on the arm and a waist dropped to hip level. The young boy with two dogs in the right foreground sports a riding coat. The boy standing next to him is attired in a velvet dolman. His older brother, at his side, has on a slashed tunic and a Rembrandtesque turban. The man only partly visible at the rear of the left group stands out for his round, Turkish turban, while the shepherds standing behind the cows on the riverbank carry crooks and wear tunics. Clearly, the intent was not to re-create an accurate impression of historical or
regional dress. Rather, the artist spiced up the stodgy formal grouping with costumes that call to mind pastoral ideals and the glamour of hunting.

Cuyp chose a costume for his hunters that resonated with a variety of related associations. The knee-length garments were not unlike the riding coat and probably seemed familiar in cut and form, and appropriate for a huntsman. The richness and the exoticism of the eastern European costumes suited the social aspirations of Cuyp’s sitters. The Hungarian origin of the hunters’ costumes could have called to mind the skill of the eastern European horsemen, the fierceness of the cavalry, and perhaps even the fight for moral justice against the Turks. And it was an association that fell in line with traditional representations of the hunt. Also, the costumes’ similarity to pastoral tunics accorded well with the glowing light and the landscape. As he did so well in his landscapes, Cuyp blended the familiar with the exotic to create a unique and yet entirely fitting costume for his hunters.
1. I would like to thank Marieke de Winkel for sharing invaluable research from inventories and for her help in clarifying terminology. I am also grateful to Irena Tarnau, specialist in eastern European costumes, David Edge, arms and armor specialist at the Wallace Collection, and Bob Carroll, armor specialist at the Metropolitan Museum of Art, for their advice. For these descriptions of the costumes in the Pompe van Meerdervoort portrait, see Ben P.J. Broos, “Rembrandt’s Portrait of a Pole and His Horse,” Simiolus 7 (1974), 198, note 9; Barbara Burn, Metropolitan Children (New York, 1984), 58; Diana de Marly, “Undress in the Oeuvre of Peter Lely,” Burlington Magazine 120 (November 1978), 750.

4. See also the print by Johann Christoph Weigel of a Hungarian nobleman, reproduced in Brussels 1999, 63.

6. A spectacular example, worn by Milidós Esterházy (1582–1645) for his wedding, is still extant, but simpler ones survive as well. Tarnau 1991, 19.

10. In particular, the Renaissance footwear and extreme shoulder rolls based on Spanish dress. Tarnau 1991, 127.

11. See, for instance, the Polish and Hungarian horsemen, reproduced in the standard monograph on Della Bella’s prints: Alexandre De Vesme, Stefano della Bella: Catalogue Raisonné, with introduction and additions by Phyllis Dearborn (New York, 1971), nos. 275, 277. Held noted correctly that the costumes are not to be distinguished by the presence or lack of braiding, but did not discuss the line of the dress. Held 1991, 73–74, note 57.

12. The women’s Hungerline, fashionable in the 1630s and 1640s, usually made of silk and worn together with a skirt, was an overgarment derived from the men’s version.

13. Marieke de Winkel, oral communication. For instance, it appears in the inventory of Floris II van Culemborg (RA Gelderland, Arch. Graven van Culemborg, 393), reprinted in A.J.M. Koehnein et al., Johan Wilfert van Brederode 1599–1655: Een Hollands edelman tussen Nassau en Orange [exh. cat., Historische Vereniging Het land van Brederode] (Vianen, 1999), 90–95. Apparently, even at that time, there was some confusion between the cassock (casaque or kabau) and the Hungerline, since several entries cross out one term and replace it with the other.

14. Light horsemen played an important role in the defense of Hungary, and came to be known as hussars under Matthias Corvinus (1443–1490). We know little about the origins of the hussars, but the word huzar is said to derive from the Italian cuza (corsair or freebooter). The hussars wore coats of mail and armor that do not resemble that of Cuyps’ horsemen. Ferenc Temesváry, Arms and Armor (Budapest, 1982), 24–25. Eastern European cavalry participated in the mercenary armies of western Europe, and Hungarian hussars fought in the Thirty Years’ War, along with the Croats and Polish.

16. The name Hungary is something of a misnomer during the period in question, as it was made up of three separate political units.

19. For more on relations between Hungary and the Netherlands, see Brussels 1999.

22. Even the hawk is an ordinary type that was never used for hunting. Peter Marinissen et al., eds., De Zichtbare Wereld: schilderkunst uit de Gouden Eeuw in Hollands oudste stad [exh. cat., Dordrechts Museum] (Dordrecht, 1992), 154.

23. In the Netherlands, hunting was traditionally the purview of the court. In the seventeenth century, restrictions were loosened somewhat to allow the nobility and eventually wealthy members of the regent class to participate in the sport. See Alan Chong’s essay in this catalogue and Chong 1992, 138–139, 261–262; Eddy de Jongh, Portretten van Echt en Trouw: Hauwefijk en gezin in de Nederlandse kunst van de zeventiende eeuw [exh. cat., Frans Halsmuseum] (Haarlem, 1986), 261–262.

26. Known as a karpoes, such a fur-lined cap can be seen, for instance, on the kolf player in Hendrick Avercamp’s Winter Landscape with Skaters (c. 1609, Rijksmuseum, Amsterdam). The term karpoes occurs in inventories of eastern European clothing as well (see note 7).

27. Two examples, one from the end of the sixteenth century and the other from the seventeenth century, have these qualities (Magyar Nemzeti Múzeum, Fegyvertár, Budapest, inv. nos. 55.3331 and 55.3335). Reproduced in Brussels 1999, nos. 200, 201.

30. Cupit’s primary point of reference would very likely have been artists from Rembrandt’s circle who settled in Dordrecht, such as his uncle Benjamin Cupit, Paulus Leef, Nicolaes Maes, Samuel van Hoogstraten, and Aert de Gelder. See De Groote’s essay in this catalogue.

31. A similar combination of bonnet with feather, metal gorget, and slashed sleeves occurs in Rembrandt’s Standardbearer (1636, private collection, Paris). Ferdinand Bol’s The Falconer (1647, Ranger’s House, London), and Dirck Sintvoort’s Portrait of Martinus Alewijn as a Hunter (1644, Rijksmuseum, Amsterdam).

32. It can be seen in the first decades of the sixteenth century, for instance, in the work of Lucas van Leyden.

33. It resembles closely the one worn by Anna van Eckels as Rebecca in Ferdinand Bol’s portrait historié of his future wife, a wealthy Amsterdammer, and her first husband, Erasmus Scharlaken (c. 1648, Dordrechts Museum).

34. The figure of Céladon on the title page of L’Astrée (Paris, 1615), the seminal pastoral play by Honoré d’Urfé, wears such a tunic.

35. See, for instance, Salomon Savery’s illustration for J.H. Krul, Pastorel Mayyck-speyl van Juliana en Claudiaen; the engraving Pastorel Scene, in J.H. Krul, Eerlyke tykurtong (Haarlem, 1634); and the engraving in Pastorel by-syndel-speyl van Claris en Philida (Amsterdam, 1634).

37. Riding treatises of the seventeenth century with plates showing horsemen in what can be considered daily attire include Antoine de Pluvinel with plates by Cripijn van de Passe, Manège royal ou l'on peut remarquer le défaut et la perfection du chevalier en tous les exercices de cet art, digne des princes... (Paris, 1653); Antoine de Pluvinel, L'Instruction du Ray en l'exercice de monter à cheval (Paris, 1655); William Cavendish, the duke of Newcastle with plates by Lucas Vorsterman after Abraham van Diepenbeeck, La Méthode nouvelle et invention extraordinaire de Dresser les Chevaux (Antwerp, 1657–1658); Delcampe, L'Art de Monter à Cheval (Paris, 1658); Nicolas Chevalier, Description de l'Académie à Monter à Cheval (Utrecht, 1706).

38. The two garments can be distinguished by their sleeves, since the cassock had set-in sleeves that usually hung down the back of the arm.

39. They can be seen in many stable and riding scenes, such as the Interior of a Smithy (c. 1657, National Gallery, London, no. 2591) by Gabriel Metsu; Philips Wouwermans, a specialist in painting horses and equestrian scenes, represented the red coat with gold trim frequently as well, for instance, in his The Outdoor Riding School (Musée du Louvre, Paris, inv. no. 1956).

40. Jacques Callot depicted various coats, including a fur-lined one worn with broad-brimmed hats and feathers in his The Large Hunt, 1619–1628, etching (L. 355).

42. In the 1650s, men began to wear their hair increasingly long, and the wig came into style for those who were not fortunate to have a head of full and long curls. Actual hair and wigs are not always distinguishable in paintings. On wigs in the Netherlands, see J.H. der Kinderen-Besier, Spelswart der Mode: De kladrĳ der voorouders in de zeventiende eeuw (Amsterdam, 1950), 177–178, 215–217.

43. This dress (c. 1660–1665, National Trust, Claydon House) is reproduced in Jane Ashelford, The Art of Dress: Clothes and Society 1500–1914 (London, 1996), 96, pl. 75.

44. Feathers are often seen on women in riding costumes; for instance, the rather masculine hats adorned with feathers worn in Adriaen Pietersz van de Venne, Frederick of the Palatine and His Wife Elizabeth Stuart on Horseback (1628, Rijksmuseum, Amsterdam) and the outrageous feather headdress in Jan Mijtens, Maria, Princess of Orange with Her Horse and Two Pages (Mauritshuis, The Hague). Similarly, the woman in Philips Wouwermans’ Departing for the Falcon Hunt (Musée du Louvre, Paris, inv. no. 1954) wears a feather.

45. A buff jerkin, probably owned by Ernst Casimir of Nassau is in the Rijksmuseum, Amsterdam; another worn by King Gustavus Adolphus of Sweden at Lützen in 1632 is in the Livrustkammaren, Stockholm; an English one is at the Victoria and Albert Museum, London (inv. no. T.14-1948).

Pigments and Color Change in the Paintings of Aelbert Cuyp  Marika Spring

Aelbert Cuyp’s landscapes have long been admired for their depiction of a soft golden sunlight, created with translucent yellow-green and soft gray-green colors. River Landscape with Horseman and Peasants (cat. 45), painted at the height of his career, is a prime example. The soft gray blue of the sky fades into pale yellow at the horizon. The distant sunlit mountains and landscape are a subtle yellowish green, and a strong yellow light falls onto the path in the foreground. Cuyp’s earlier paintings, as has often been noted, have a more somber tonality, similar to the monochromatic landscapes of Jan van Goyen, while the later paintings have warmer, more yellow tones influenced by Dutch Italianate landscape painters such as Jan Both, who returned to Utrecht from Italy in 1642.1

This study of River Landscape and ten other paintings spanning the whole of his career looks at the pigments Cuyp used to achieve these effects and explores whether his materials changed along with his style. Cuyp’s choice of pigments also had consequences for the conservation of his paintings. Looking more closely at River Landscape, the shadows of the burdock leaves in the bottom right corner are flat and formless, and the paint appears clouded by a grayish veil, the result of a pigment deterioration (fig. 1) that is quite common on paintings by Cuyp; a very similar deterioration can be seen in the burdock leaves in Lady and Gentleman on Horseback (cat. 40).

Pigments
The wide variety of greens in the landscape and foliage of Cuyp’s paintings comprise a complex mixture of pigments containing varying proportions of yellow lake, lead-tin yellow, yellow earth, the blue earth pigment vivianite, and green earth, modified with smaller amounts of umber, cassel earth, black, and red earth or vermilion.2 Earth pigments are dominant in this list, as might be expected in the rather muddy tones of Cuyp’s landscapes. The light and opaque lead-tin yellow (a manufactured lead-tin oxide) was used in significant amounts only in the lighter yellow shades, such as the touches of highlights on the leaves of trees and bushes and in the pale yellow-green middle landscape lit with sunlight depicted in many of Cuyp’s compositions.

The major component of the mixtures in the darker shades of green is the translucent pigment yellow lake. The coloring matter in yellow lake pigments is a natural dyestuff extracted from plants, such as unripe buckthorn berries, weld, or dyer’s broom, and precipitated or adsorbed onto a substrate such as alumina or chalk. The source of the dyestuff, the manufacturing method used, and the substrate determine the exact color, strength of hue, and permanence of the pigment.3 A few recipes for yellow lake from the period have survived, for instance, those written down by Willem Pekstok, a painting materials manufacturer in Amsterdam who produced yellow lake pigments on an industrial scale. The ingredients for his recipe dated 1666 were a mixture of buckthorn berries, weld, yellow wood (old fustic), 100 pounds of chalk, and 20 pounds of alum.4 This recipe is typical of those of the period in that it contains a great deal more chalk than alum, as does the yellow lake pigment used in these eleven paintings by Cuyp.3 The product is a brighter yellow color than it would be if only alum had been used, but it is more prone to fading.5 This deterioration usually makes it virtually impossible to determine the source of the dyestuff in the yellow lake pigment, but in three of the
paintings studied, the paint had been protected from light by the frame rebate. A minute sample taken from this area was analyzed using high-performance liquid chromatography (HPLC), which in every case found the dye-stuff to be derived from the weld plant.7

Yellow lake, particularly as a component of green paint mixtures, is mentioned very frequently in treatises of the period on painting technique, indicating the popularity of the pigment with seventeenth-century painters. One of a number of different mixtures for landscape painting listed by Théodore Turquet de Mayerne, from his conversations with artists, states that "all sorts of green can be made from diverse mixtures of yellow lake, yellow ochre, cendre d’azur, lead white and black earth."8 Very little indication is given of the composition of cendre d’azur (blue ashes) in documentary sources. The name was used for artificial copper-containing pigments, but was also sometimes used for natural copper carbonate from the mineral azurite.9 Samuel van Hoogstraten, in his book published in 1678, listed three types, "English, German and Haarlem ashes," among the blue pigments available to artists.10 These may have all differed in composition, ashes being simply a color name referring to one of a number of different grayish blue pigments.

The grayish blue mineral pigment vivianite (hydrated iron phosphate), the blue component of the mixed greens in eight of the eleven paintings studied, may well have been classed as a type of ashes, but it has very rarely been found as a pigment in paintings. A few occurrences have been found on Romanesque and medieval wall paintings,11 but none, as yet, have been reported on any other Dutch seventeenth-century paintings.12 Sometimes known as blue earth or blue ochre, vivianite has a color that seems perfectly suited to the grayish greens that are so typical of Cuyp’s landscapes. Artists in this period usually did not prepare their own pigments but bought them from an apothecary or from the increasing number of grocers that specialized in painting supplies. Therefore, finding a pigment that apparently was not used by Cuyp’s contemporaries is surprising.13 Unfortunately, we do not know where Cuyp bought his pigments. Records show that a merchant sold artist’s materials in Dordrecht, but we also know that painters would sometimes travel to buy them.14 Pigments were traded across Europe and beyond, but vivianite was very rarely used as a pigment, possibly suggesting that it came from a local source. Deposits of the mineral exist in Cologne and Westphalia in Germany, and the Ardennes in the southern part of Belgium, none of which were too far away.15 Deposits are also found in peat bog-iron ore, perhaps the most likely source for the vivianite used by Cuyp, since not only was peat abundant in the Netherlands, but a very active peat industry was located near Dordrecht (see cat. 4).16 The blue color of the pulverant deposits found in peat bogs would probably have had more obvious potential as a pigment than the grayish black vivianite from sedimentary deposits, which only develops a blue color when crushed and ground (fig. 2).

A pigment that might be a blue earth, possibly vivianite, is mentioned in two documentary sources of the period.17 Richard Symonds, who kept notebooks of his travels in Italy in the 1650s, recorded a conversation with a Mr. Remee, probably the French artist Remy van Leemput, about a pigment that he called “Harlems Oltramarin.” Mr. Remee described the pigment as a “blew clay earth... not in any way produced from Lapis Lazuli,” making it clear that he was not talking about true ultramarine.18 The only other pigment commonly used by seventeenth-century painters

2 Blue pulverant vivianite on wood, from a peat bog in Bavaria, Germany
3 Detail of River Landscape with Horseman and Peasants (cat. 45), showing the shepherdess whose dress is painted with vivianite
4 Cross section of a paint sample from the shepherd’s blue trousers in Aelbert Cuyp’s “The Small Dort,” 1650-1652, The National Gallery, London. A grayish blue layer containing vivianite mixed with lead white can be seen lying over the green paint of the landscape.
that might conceivably be called a blue earth is the mineral pigment azurite, but it is unlikely that azurite would be described as a clay. A mixture of “terra de Harlem pink lake” is suggested for “farthermost trees and dusky places” in some notes about the practice of a landscape painter referred to as Seigneur Otto, most likely the Dutch painter Otto Hoynck.

The context, in a mixture with pink lake (the English seventeenth-century term for yellow lake) that produced a green, suggests that “terra de Harlem” or Haarlem earth was a blue pigment, perhaps equivalent to the “Harlems Oltramarin” described in Symonds’ notebooks.19

Cuyp also used vivianite for some of the figures in his paintings, such as the dress of the shepherdess in the background landscape of River Landscape with Horseman and Peasants (fig. 3), the trousers of the shepherd in “The Small Dort” (fig. 4), the skirt of the milkmaid in “The Large Dort” (The National Gallery, London) and the blue jacket of one of the horsemen in Horsemen and Herdsmen with Cattle (cat. 38).20 However, he did use other blue pigments: the dress of the shepherdess in A Hilly River Landscape (The National Gallery, London) is painted with indigo, and the skies in all the paintings studied were painted with smalt (a blue glass) mixed with lead white. Smalt is not a particularly stable pigment, and it has often changed to a grayish hue, but it discolors less when mixed with lead white and has survived well on Cuyp’s paintings. He seems to have used a particularly good quality of smalt, which in the brightest blue of some of the skies could almost be mistaken for ultramarine.

**Cuyp’s Early Period and Later Paintings**

The change in style and tonality between Cuyp’s early paintings and those painted after the middle of the 1640s, when the influence of Dutch Italianate painters began to appear in his work, is not reflected in his choice of materials — much the same pigments were used in the earliest and latest paintings studied. The most obvious change in technique is in the preparation of the support for painting. The influence of Van Goyen’s paintings can perhaps be seen in the earliest painting examined, which has an off-white priming that is so thin that the texture of the wood grain is visible through the paint.21 Most of the paintings have a beige preparatory layer, made from mixtures of white, yellow, black, and brown pigments.

A few of the late canvases have a rather different preparation — a gray layer applied over a red earth layer. This combination would have created a beige or flesh-colored surface to work on that was not much different in color from the grounds of the earlier paintings. A so-called double ground of gray over red earth was common in the seventeenth century in paintings from all over Europe, particularly later in the century, and several treatises on painting techniques of the period describe it. The few paintings by Jan Both that have undergone technical examination have this type of preparation, as do other paintings by Utrecht artists of the period and paintings by Rembrandt dating from as early as 1635.22 Interestingly, though, a study of the preparatory layers on paintings by the Haarlem painter Frans Hals revealed a chronological pattern similar to the one found in Cuyp’s work; Hals used a brownish ground until about
1660, when a few examples of gray-over-red earth grounds began to appear. The significance of this similarity, however, is not clear. Our knowledge of the grounds used by seventeenth-century Dutch painters is too fragmentary to draw any firm conclusions.

Although Cuyp’s later paintings show the influence of Dutch Italianate painters such as Jan Both, Cuyp’s colors seem softer and more subtle. His skies were painted with gray-blue smalt rather than the brighter blue mixture of smalt and ultramarine that has been found on paintings by Jan Both. Jan also used different mixtures of pigments for his green paint: yellow earth, yellow lake, and lead-tin yellow mixed with ultramarine, azurite, and smalt rather than the softer blue of vivianite. The influence of Jan Both seems to have been only superficial.

Color Change

Paintings by Aelbert Cuyp and Jan Both do have in common, however, a tendency to suffer from a type of paint defect known as blanching. This type of deterioration has occurred, to some extent, in nearly all the paintings in this study. As in the burdock leaves in River Landscape with Horseman and Peasants (fig. 1), the paint appears hazy and lighter than it originally was. Blanching has a number of different causes, but the type seen on paintings by some seventeenth-century artists appears to have a pigment-related cause because only certain colors are affected — darker translucent greens, yellow greens, and brownish greens. Light and humidity also clearly play a role; since in several of the paintings in this study the paint has not deteriorated where it has been protected by the frame rebate (fig. 5). The major, and most unstable, component in the pigment mixture in blanched areas of paint is yellow lake. Tests on yellow lake pigments made according to historical recipes have shown that the type of yellow lake used by Cuyp and prepared with a mainly chalk substrate for the dyestuff is more prone to fading than yellow lakes that have been prepared with alum. This fading can be seen in cross sections of paint samples from deteriorated areas that all appear whitish at the surface — a white veil obscures the still-green paint beneath (fig. 6).

The process of deterioration is more complex than a simple loss of color from the yellow lake; it seems to involve some physical deterioration resulting in disruption of the paint film, creating an uneven surface and small voids that scatter light. The evidence for this is mostly indirect, coming from observations of cases in which the blanching is not too deep-seated. In these instances, applying a varnish of low viscosity or wetting with a solvent, which would reduce light scattering from the surface and from microvoids, improves the appearance of the deteriorated areas. Chalk, the substrate in the yellow lake pigment, is not a very satisfactory pigment in oil paint because it tends to adsorb water. Therefore, it is possible that the presence of chalk may have caused changes in the paint film beyond the simple fading of the yellow dyestuff adsorbed onto it. Moisture could possibly have been introduced into the paint film by conservation treatments such as cleaning and relining, which have sometimes been implicated in studies of blanching. However, simple fluctuations in the humidity of the environment seem sufficiently disruptive to cause this effect, since blanching has occurred on both canvas and panel paintings by Cuyp with widely different conservation histories. This explanation of the cause of blanching rather simplifies what is a complex phenomenon, not yet completely understood, but in Cuyp’s paintings, yellow lake does seem to be the principal culprit.
The two most distinctive features of Cuyp's palette that have emerged are the abundance of yellow lake in his green paint mixtures and the use of vivianite, a pigment not previously known to have been used on Dutch seventeenth-century paintings. Whether Cuyp sought out this pigment as an alternative to the more common blue pigments, or bought it as a type of blue ashes of unspecified composition we cannot know. Some of its characteristics could have made it appealing. The color seems very suitable for producing the muted tones of Cuyp's landscapes. The working properties of the fine-grained vivianite would also have been better than those of azurite and smalt, and vivianite would have been cheaper, of course, than ultramarine. Cuyp's use of large quantities of yellow lake might seem surprising because it already had a poor reputation for permanence in the seventeenth century. Abraham Larombé, whose comments were recorded by De Mayerne, stated that the pigment “endures neither the air nor the rain,” suggesting that painters might even have been aware that moisture could play a part in the deterioration. Yellow lake was, however, indispensable in creating the golden tones of Cuyp's atmospheric landscapes.
1. Michael Palmer has carried out extensive analysis on samples from two paintings by Cuyp in the National Gallery of Art, Washington, and has kindly allowed the results to be published here. Jo Kirby has contributed HPLC results and useful discussions about documentary sources. For discussions about blanching, I would like to thank Carol Christensen, Rosanna Eadsie, Mette Bjarnhof, and Sophie Plender, who also very kindly contributed her photograph of a detail of View on a Plain.

For information on Cuyp’s early paintings, see Alan Chong, “New Dated Works from Aelbert Cuyp’s Early Career,” Burlington Magazine 133 (September 1991), 606–612.

2. Small paint samples were mounted as cross sections and the pigments examined by light microscopy and EDX analysis in the scanning electron microscope. Detailed descriptions of the mixtures found in the green paint in each of the paintings examined can be found in the table in the appendix.

5. Hermens and Wallert 1998, 284. EDX analysis on samples of green paint revealed that the yellow lake pigment contains a large amount of chalk and almost undetectable amounts of alumina.

7. I would like to thank Jo Kirby (Scientific Department, National Gallery, London) for analysis of the dyestuff by HPLC. The paintings in which weld was identified in the yellow lake pigment are Landscape with Two Windmills (Staatsmuseum für Kunst, Copenhagen), View on a Plain (Dulwich Picture Gallery, London), River Landscape with Horses and Peasants (cat. 45), and Landscape with Horse Trainers (cat. 39). The analysis also serves to confirm that the paint contains a yellow lake pigment, and that the chalk detected by EDX analysis is not a colorless extender added to the paint.

12. The presence of vivianite is difficult to determine by optical microscopy, particularly in green mixtures in which tiny grayish particles are embedded in a matrix of yellow lake and yellow earth; vivianite only really becomes apparent when analyzed by SEM-EDX.

14. Cornelis van Borenbeek was recorded as selling painting materials, as well as other supplies in Dordrecht in about the middle of the seventeenth century. Xenia Henny, “Hoe kwamen de Rotterdamse schilders aan hun verf?” in Rotterdams Meesters uit de Gouden Eeuw, ed. Nora Schadee [exh. cat., Historisch Museum Rotterdam] (Zwolle, 1994), 48. Cuyp would not necessarily have bought his supplies in Dordrecht, since documentary sources record instances of artists traveling to other towns to buy materials. See Levy-Van Halm in Gaskell and Jonker 1998.

17. The name vivianite was not applied to the mineral until the nineteenth century, when it was named for the mineralogist J.G. Vivian.
18. Mary Beal, A Study of Richard Symonds: His Italian Notebooks and Their Relevance to Seventeenth-Century Painting Techniques (London, 1984), 225. Van Leemput stated that this “blew clay earth” was “much used in faces by all ye face makers in London.” Rosamund Harley has already suggested that this blue earth might be vivianite, or another blue earthy mineral, illsite. See Rosamund D. Harley, Artists’ Pigments 1600–1855, A Study in English Documentary Sources, 2d ed. (London, 1982), 59.

24. Epley 2000. Epley stated that complex mixtures of ultramarine, smalt, green earth, copper blue, yellow, and red earths, lead-tin yellow, yellow lake, chalk, lead white, and black were used for the foliage.

26. For an illustration of this painting, see Reiss in London 1973, 75, no. 42.

27. Vivianite is of only medium stability, but blanching has also occurred in those paintings in which it is not a component of the green mixtures; therefore, it is unlikely to be the cause. The blue jacket of one of the horsemen in Horsemen and Herdsmen (cat. 38), which is painted with vivianite, does show some sign of deterioration, however. See Helen Howard, “Romanesque and Gothic Wall Paintings in Winchester Cathedral: An Unusual Use and Alteration of Vivianite,” Journal of the Russell Society 6, no. 2 (1996), 93–96. Green earth has been implicated in previous studies of blanching, but it is only a minor component of the paint in deteriorated areas in paintings by Cuyp. See Karin Groen, “Scanning Electron Microscopy as an Aid in the Study of Blanching,” The Hamilton Kerr Institute Bulletin, ed. Ian McClure, no. 1 (1988), 48–65.

29. Epley 2000 also made the point that the hygroscopic nature of chalk may have contributed to the blanching in a painting by Jan Both.

73 Pigments and Color Change
Cuyп’s major artistic interest was landscape.¹ About five out of six of his drawings are landscapes, and most of the others are studies of plants, animals, and shepherds.² He favored simple rural motifs observed from close proximity, views of forests, distant panoramas, and views of towns, particularly Dordrecht, Nijmegen, and Cleves. Cuyп usually sketched the first three subjects with chalk and brush in gray, often with the addition of color; the fourth, with black chalk only and rarely touched with color. His choice of subjects and their interpretation, his interest in light, and his very personal application of color set him apart from his contemporaries.

The functions of verisimilitude and fantasy differ in painting and drawing. Cuyп sketched nature for its intrinsic qualities. In each of his drawings (with the exception of foregrounds and, possibly, a few imaginary views), he strived for topographical correctness.³ By contrast, he painted most of his landscapes from imagination, at times incorporating motifs he had observed in nature or combining some he had seen and drawn separately. Topographic accuracy in Cuyп’s drawings does not surprise in views of towns like Dordrecht or Nijmegen in which recording the town and its buildings was the main purpose. It is astonishing, however, to realize that drawings of simple rural motifs without man-made structures, or drawings in which a shed, a barn, or a church tower is almost entirely hidden by shrubs, trees, or an elevation in the terrain were largely true to nature as well. Certainly the repetitive, somewhat stereotypical foregrounds composed of reeds on watery banks or hilly terrain, which effectively provided a pictorial repoussoir, were pure constructs.

The great majority of Cuyп’s drawings is characterized by the absence of man and an understatement of his intrusion in the landscape in any form. Even the idea of the pastoral, prominent in his later paintings, is rarely evoked. When he did include figures, he did so to indicate scale rather than to convey the role of man or to enliven the scenery. By contrast, in the landscape drawings of his close contemporaries, Jan van Goyen and Pieter Molyn, human activities are included to emphasize man’s link to nature. In Cuyп’s drawings, man’s work, his mills, his farm buildings, and his churches have become part of nature, with light and air used as unifying elements. The dominance of landscape over man is also emphasized in Cuyп’s drawings of panoramas in which the towns are submerged as part of the landscape rather than as its dominant feature.⁴

Aelbert’s father, Jacob Cuyп, initiated Aelbert’s fundamental artistic direction by exerting the greatest formative influence on him as a landscape artist. This assertion may seem surprising, since Jacob is known principally as a portraitist. However, Aelbert’s interpretation of the rural surroundings of Dordrecht, known from a large group of drawings, clearly reflects his father’s influence. According to Houbraken, Jacob had been a pupil of Abraham Bloemaert, whose art was certainly familiar to him; Jacob’s wife came from Utrecht, a very active art center not far from Dordrecht; and Jacob may well have sent Aelbert there to broaden his horizons. His drawings, in the use and application of color, are reminiscent of those by Roelant Savery, Abraham Bloemaert, and Cornelis Saftleven; these artists all lived and worked in Utrecht, where Aelbert also became acquainted with some of the remarkable medieval monuments that he chose for his drawings. This orientation toward Utrecht distinguishes Aelbert from other Dordrecht artists who went to Amsterdam to be trained by Rembrandt and who subsequently returned to the city on the Merwede.⁵
Cuyp's Drawings in Context

Landscape and Autonomous Drawing
To understand Cuyp's significance as a draftsman, it is necessary to review some aspects of his work that touch on broader issues, such as landscape as a specialty and drawing as an autonomous art form. After a flourishing beginning in Flanders, the subject of landscape acquired an unparalleled significance in Holland in the first decades of the seventeenth century. During Cuyp's lifetime the number of artists specializing in landscape in Holland was far greater than anywhere else, and these artists were able to make a living (although sometimes only by producing enormous quantities of paintings). Cuyp's specialization was far from unusual and his chosen field was respectable, in spite of the low ranking it traditionally received in art-theoretical writing.

Particularly in Holland, autonomous drawing had a place among the other arts at the time. Besides drawings made as preliminary sketches or complete designs for other works of art, such as paintings or prints, many drawings were made as self-contained or autonomous works of art. Their status was similar to paintings or prints. Most of these self-contained drawings were finished, rather detailed, complete subjects. But sketchy drawings were also considered complete in themselves. Many of the drawings of biblical subjects by Rembrandt and his pupils were autonomous rather than preliminary studies. Elsewhere in Europe — in Italy, France, Spain — a drawing more frequently served a preliminary function in the artistic process and less often played an independent, autonomous role.

Cuyp's drawings were self-contained, autonomous works of art. In some cases, like the large and elaborate panoramas, the independence of the drawings is evident, but in others (which are in the majority), the seemingly casual selection of the motif, the appearance of effortless execution, and an overall informality seem to belie the status of autonomy. They were not quick sketches or recordings of motifs wanted for future incorporation in paintings (as are Van Goyen's quick sketches of 1650/1651). The drawings are complete, the compositions are thoughtfully constructed, the space is convincingly suggested, the interplay of light and shadow fully rendered, and the color applied with great sophistication. These elements indicate a certain degree of finish; they do not imply that he made such works as preparatory designs for paintings — though he from time to time used drawings for motifs in paintings and, in a few instances, used an entire drawing as a modello for a painting (cats. 4, 64). He molded unassuming but picturesque rural sites into autonomous works of art, preserving both topographical truth and a sketchy, informal appearance.

As an art form the autonomous landscape drawing was practiced not only "for the market" by such artists as Jan van Goyen and Pieter Molyn, but also frequently by independent, well-educated, and intellectually sophisticated amateur artists. One thinks of Cuyp's younger contemporaries Jan de Bisschop (1628–1671) and Constantijn Huygens the Younger (1628–1697), accomplished draftsmen who made large numbers of landscape drawings, most of them topographically faithful, when they were not busy as prominent lawyers. Huygens' drawings remained together until 1823, when they were sold at auction. Cuyp, too, did not dispose of his drawings, and although he was not one of the amateurs, he may have shared their attitude toward the self-contained landscape drawing as a special type of work of art.
Cuyp combined traditional and recently developed media in a personal way. He used black chalk for the main structure of his drawings, usually applying it very lightly at first, then with more pressure, and finally moistening it for black accents (with water or, presumably if need be, with his tongue). He introduced other accents, from various shades of gray to black, with a brush and suggested shadows and clouds with washes from light to dark gray (in this sequence, but he reverted to materials used earlier whenever necessary), finally covering the darkest parts of the drawing with gum arabic. In his later drawings he combined black chalk with graphite, for the lighter tone and sharper detail it could produce.

One of the main features that sets Cuyp’s drawings apart from those of his contemporaries is the subtle yet decisive use of color. Others in Holland in the seventeenth century applied color to their landscape drawings. One of them, Hendrick Avercamp (1585–1634), did so in ways that demonstrate the very different effects that could be obtained. Early in the century, circa 1613, he enlivened some of his black-chalk landscapes with lightly applied, pastellike, transparent watercolors; later he used strong colors, often with bodycolor, as the main element of a design and actually made little paintings on paper. In the earlier works, black chalk defined the design; in the later ones, the colors. Aelbert Cuyp also defined his subjects in black chalk, fusing it with lines and dashes drawn with the brush in color, sometimes including touches of white bodycolor. In contrast to the later Avercamp, Cuyp preferred not to color or “wash” entire sections with the brush only (except for clouds), but to sketch with the brush in conjunction with black chalk; neither did he make drawings in color only, without any black chalk.

Cuyp’s use of color was also sophisticated because of his habit of constantly creating new colors and shades of tints, such as yellowish green or greenish brown, or grayish pink and the like. Max Friedländer rightly wrote in 1901 about “the great colorist’s characteristic blond olive-green tonality in its manifold variations.” Of all Cuyp’s predecessors, Roelandt Savery presents the closest parallel, for he also sketched with colors, usually together with black chalk, mixing them (although less frequently than Cuyp) to create new tones. After a sojourn in Prague at the court of Rudolf II and in Bohemia — where Pieter Stevens and Paulus van Vianen also applied colors to their landscapes — and after a short residence in Amsterdam, Savery came to Utrecht in 1619. Cuyp must have seen Savery’s drawings, especially A Mill Tower on the Moldau near Prague (fig. 1), for not only are the colors related but its composition, adopted in reverse, also appears in Cuyp’s Utrecht with the Vecht River and the Pellekussenpoort (cat. 49).
Cuyp frequently covered parts of his drawings with a transparent, colorless, varnishlike substance consisting of gum arabic (presumably diluted with water). He applied it carefully, with a rather broad brush, only going over the darkest areas of his drawings, such as foregrounds and adjoining sections, for instance, trees and hills that were in shade. He applied it after finishing the design, although he sometimes added a few lines over the substance as an afterthought. His purpose undoubtedly was to prevent the black chalk from rubbing off, and to intensify and preserve the contrasts between light and dark. Cuyp was not the first one to use gum arabic as a fixative or a varnish; Pieter Molyn had preceded him in one drawing and apparently never used it again. Very few did.

The Series as Format

Cuyp liked to produce drawings in series. This practice is reflected in his frequent use of sketchbooks or drawing books (or, in at least one instance, a number of unbound sheets of the same paper). The drawings of each series represent similar subject matter, are the same size, and are executed with the same materials used in a similar way. Most series can be reconstructed at least in part. They vary in length from a few sheets to no less than twenty. Cuyp also made drawings in pairs, but rarely single drawings by themselves. For some series he used one sketchbook, for others, more than one, but that does not imply that sketchbooks were completed in a narrow time span; he may have expanded a series in one sketchbook with intermissions. Although the format of the sketchbook must have facilitated making drawings in series, producing series of like drawings must have answered a more fundamental need. The series was more than a matter of convenience. Each series and each pair represented a type of landscape. The drawings were not meant to be in a specific order, and Cuyp did not number them, but he must have seen them as variations on a theme: not as imaginary modifications of a central idea, but rather as a collection of existing sites that resembled each other and that he represented in a similar way.

The series had a specific function with a long tradition. In the fifteenth century, the print series became a tool to improve the transmission of ideas and was later used for many subjects, religious as well as secular. The “instructive series” not only organized data, it intensified the cumulative message of its components. In the Netherlands, earlier than elsewhere, the series became the vehicle for landscape scenery, in prints as well as in drawings. Pieter Bruegel the Elder’s series of large mountain landscapes was made into print by the Van Doetecum brothers and published by Hieronymus Cock about 1555, marking a most impressive beginning of the series as a format for publishing landscapes. Only a few years later, in 1559 and 1561, the same Hieronymus Cock published views of the rural surroundings of Antwerp in two series of fourteen and at least twenty-seven prints respectively.

These series of rural landscapes had a great impact in the Northern Netherlands in the early seventeenth century. Not only did Claes Jansz Visscher copy a number of prints from Hieronymus Cock’s series, publishing them in 1612 as a series entitled Regiunculae... (Little Landscapes), he also portrayed similar rural scenes in the environs of Haarlem in his drawings and prints of 1607 and shortly thereafter (fig. 2). Esaias van de Velde similarly adopted the series as a format for ten landscape engravings, most of which also show rural sites near Haarlem. The most prolific producer of landscape series was Jan van de Velde. About 1616 Visscher published three of Jan van de Velde’s series (totaling sixty etchings), and Robert de Baudous published two more (comprising thirty-six etchings).
Aelbert Cuyp was much impressed by Claes Jansz Visscher’s village views. He used the idea for his own drawings of the environs of Dordrecht, and the concept of the series for many of his drawings. By the time he became active as an artist, the format of the series had already been adopted for landscapes by draftsmen of the previous generation, among them Esaias van de Velde, Willem Buytewech, Jan van de Velde, and Jan van Goyen. And the format would remain valid later in the century: Allart van Everdingen, Roelant Roghman, Lambert Doomer, and Willem Schellinks used it. Outside the Netherlands, Claude Lorrain in particular arranged his landscape drawings in series or groups.

The Landscapes

A brief discussion of the characteristics that differentiate Cuyp’s series provides insight into his contribution to the art of landscape. A chronology of his drawings can be established only in its broad outlines. One reason for this difficulty is that Cuyp did not date any of his drawings. Approximate dates, therefore, are based largely on the occasional use he made of drawings for dated paintings or on stylistic similarities to those paintings. Moreover, the series demonstrate that Cuyp changed his style frequently, varying it over time as well as according to the type of landscape (for example, a close-up village view, a panorama, or the interior of woods). The different styles, it is important to note, are not necessarily sequential. Despite these difficulties of dating, Cuyp’s drawings seem to be concentrated in three distinct periods of his career. His most active period as a draftsman was between 1639/1640, when he was about nineteen or twenty years old, and 1642. During the mid-1640s Cuyp made a group of panoramic drawings of Dutch towns and another group of forest scenes. In the early 1650s he made a remarkable series of at least twenty black-chalk sketches of Nijmegen, Cleves, and other sites near these towns. No drawings can be securely dated later than the early 1650s.

Cuyp, in the short, very intense, early period of circa 1639/1642, executed the majority of his drawings, usually in series. The very first drawings were two detailed renderings of Dordrecht’s main watergate, the Groothoofdspoort, in black chalk only (Gemeentearchief, Dordrecht; Hamburg Kunsthalle). They are in a generalized black-chalk style that has no specific precedent. At about the same time Cuyp made large, autonomous drawings of historic monuments and town views, here referred to as the Utrecht Group. For these he used complex techniques, including watercolor, heightening in white, and gum arabic, over a basic
structure of black chalk. *Utrecht with the Vecht River and the Pelikussenpoort* (cat. 49) and views of the Mariakerk (cats. 46, 47) and the Buurkerk (cat. 48) are among them. He used the Frankfurt drawing for a painting that can be dated to the early 1640s (see cat. 5), which provides a clue for the dating of the entire Utrecht Group. These drawings reflect the artist’s familiarity with drawings by Roelandt Savery, specifically his views of sites in Bohemia and his use of watercolor and gouache.

During this early period Cuyp also sketched distant views of towns like Rhenen, Utrecht, and Amersfoort, placing them in the middle distance beyond hilly foregrounds; these drawings are here referred to as Small Panoramas (Teylers Museum, Haarlem; F. Koenigs, formerly Haarlem; Kupferstichkabinett, Berlin; and cat. 71). The *View of Rhenen* in Haarlem (fig. 3) was used for the background of a family portrait set in a landscape that he painted with his father in 1641 (see cat. 3, fig. 1). This group of Small Panoramas, therefore, also dates from circa 1641. The precedents for Cuyp’s distant Small Panoramas, such as the drawing in Haarlem, are the prints in Georg Braun and Franz Hogenberg’s *Civitates orbis terrarum* (1572–1618), many of them designed by Joris Hoefnagel or under his guidance. Cuyp must have known them, but modified the concept by bringing the foreground closer and introducing color. Cuyp made at least four more drawings of a similar concept, showing a valley or flat lands beyond a dark foreground, but sketching them more loosely and only in black chalk and gray wash with a touch of white bodycolor in some (for instance, cat. 58).

*Country Road with a Cottage alongside a River* (cat. 64) is totally different from the Haarlem *View of Rhenen*, in motif, perspective, and detail. Cuyp used it for a painting that can be dated to 1640/1641 (cat. 4). The gray and colored washes and the distribution of light and dark were applied very skillfully — the road and the barn lie in direct sunlight while the foreground is in shade. Cuyp used the same composition in his drawing *View of ’s-Gravendeel* (cat. 64, fig. 1) in Saint Petersburg. In both drawings the light comes from the side and from behind, a device Cuyp used frequently to model contrasts between light and shade that define subject and space. These two drawings of rural motifs, forming a pair or part of a group (here called River Borders), differ greatly from the Small Panoramas and the Utrecht Group, but nevertheless were done about the same time, on paper of the same size (approximately 19 x 30 cm).

The largest single group of Cuyp’s drawings from this early period, and one of his major achievements, represents subjects near his hometown. To judge by those that are identifiable, Cuyp sketched no less than
twenty-five views of rural subjects in the environs of Dordrecht, two of them in the town itself (cat. 61). Originally part of various sketchbooks, the drawings are all approximately the same size (about 14 x 19 cm) and were done in black chalk and gray wash; the majority was colored with watercolor in a variety of tints, and a number were heightened with white bodycolor. At present they cannot be dated more precisely than circa 1640/1642. They exude an air of simplicity and spontaneous enjoyment of nature. They also seem to follow, chronologically, the drawings of the Utrecht Group and the Small Panoramas, but may have been done concurrently. One of the drawings of the Environs of Dordrecht Group is *Fields, a Tree to the Left, and Farm Buildings in the Distance* (Museum Boijmans Van Beuningen, Rotterdam), which in composition and light-dark contrasts is similar to *A Farm with Cottages and Animals* (cat. 10).

The Environs of Dordrecht Group demonstrates Jacob's formative influence on Aelbert. Jacob did not limit himself to portraiture, and as early as 1627 he painted a *Fish Market* (fig. 4) with a background of farm buildings and trees that in motifs and composition is very similar to some of Aelbert's drawings in the Environs of Dordrecht Group. Other landscapes painted by Jacob in 1627 and 1628 for two versions of a shepherdess with a little boy (possibly portraying his wife and son; see Wheelock essay, fig. 3) anticipate later drawings and paintings by Aelbert. The farm settings in his designs for a series of prints of animals by Reinier Persyn (1641) also resemble the scenery in some of the Environs of Dordrecht drawings, and the execution of Jacob's extant drawing for one of Persyn's prints is very close to Aelbert's way of handling such subjects (see cat. 2, fig. 1). Father and son sometimes worked together, Jacob portraying families seated or standing in the open air with a view of fields or a town behind them painted by Aelbert. Two such comparatively large joint works date from 1641 (cat. 3, and fig. 1 in that entry).

At least fifteen broad panoramas of Dutch towns and distant views, here referred to as Large Panoramas, rank among Cuyp's most impressive landscapes. They are difficult to date precisely, but they seem to have followed the small rural scenes and distant views of towns just mentioned, and probably date from the years 1642–1646. These large panoramic views (they measure about 18 x 45/50 cm) are characterized by hilly foregrounds that serve not merely as repoussoir or elevated vantage points, but that tend to absorb the main motif or constitute the main emphasis of the drawing.

Most Large Panoramas are broadly sketched and are colored, usually yellowish green. Cuyp sketched the broad outlines first in thin and light black chalk, making the details gradually heavier and adding accents by moistening the chalk and by using a brush and gray ink; he then applied gray and colored washes, fusing the colored washes with the chalk, and
frequently reverting to black chalk and brush in dark gray to make the dark accents stand out. Frequently he added gum arabic to the darkest areas, both to fix the chalk and to produce a deeper black.

Among the towns represented in this group are Arnhem, The Hague, Rhenen, Harderwijk, and Calcar, all places near hills or dunes that gave him the opportunity to make nature the dominant feature. Prints by Jan van de Velde, who frequently used the oblong format for landscapes seen from a distance, provided the starting point for Cuyp’s Large Panoramas. One of Van de Velde’s series, comprising eighteen oblong prints dating from 1615, includes a view across fields beyond an elevated foreground (fig. 5) that anticipates Cuyp’s panoramas. Cuyp created his own view of such motifs, and in contrast to Jan van de Velde, he emphasized the foreground terrain to enhance the impression of depth.

About the same time, 1642–1646, Cuyp made about eight sketches of roads through or along the edges of forests, consisting largely of old oaks (cats. 51–53). They are rooted in the wooded scenes by Gillis van Coninxloo and more closely related to views of woods etched by Willem Buytewech circa 1616 (see Wheelock essay, fig. 14). Cuyp, however, totally changed their ideas by making the woods look old and inhospitable rather than contrived and mannerist. He sketched these views, here called Forest Edges, broadly with black chalk and brush lines and washes in gray, suggesting the wildness of nature. His wooded scenery resembles Jacob van Ruisdael’s painted forests of the 1650s, leading one to conclude that Cuyp must have seen such motifs east of Utrecht and in Guelderland, where Ruisdael found them.

In 1645 or somewhat earlier, Cuyp made four large oblong drawings of Dordrecht seen from across the river (cats. 80, 82–84). Two of them are in black chalk and gray watercolor only; the other two have touches of color. The emphasis on the linear structure of the houses, the church, and other buildings aligned along the river sets these drawings apart from his other works. Cuyp’s goal was to render the town as it stretched out along the river, absorbed by light and confined between an endless sky and a wide body of water, and to provide topographic accuracy at the same time.

Cuyp adopted the precision applied to these profile views of Dordrecht to a group of at least sixteen large views of the towns of Nijmegen, Cleves, and their surroundings, which he made about 1651/1652 using smaller sheets of paper (about 14 × 19 × 24 × 27 cm). Cuyp also used black chalk, as he had for the profiles of Dordrecht, but for the Nijmegen and Cleves views he sometimes combined it with graphite in order to obtain greater precision in small details and more tonal gradation. The project was well defined, although whether he carried it out for himself or as a commission is not clear. His goal was to make topographically correct views of towns and their settings.
The towns (Nijmegen, Cleves) and the hills in between — situated in a small region along the Rhine on both sides of the present border between Holland and Germany — were tourist attractions and were frequently chosen for representation in paintings and drawings by Jan van Goyen, Herman Saftleven, Lambert Doomer, and others. These views of hills bordering meadows, of towns in their hilly settings combining distant precision with nearby boldness of detail, of towns seen across a body of water, and of buildings selected for scrutiny incorporate all the interests he had expressed in his earlier drawings. He found the subjects that satisfied these preferences in this one area around Nijmegen. He sketched them in black chalk and pencil, without color, with great care for rendering space, light, and detail. They demonstrate great accomplishment. But then he quit drawing.

Cuyp rarely disposed of his drawings. They had little influence on other artists,29 and they rarely appear in auction catalogues until 1767, when more than eighty were sold in a Dordrecht sale; they may well have been part of Cuyp’s estate.30 The commercial aspect of his drawings apparently did not interest him very much.

**Aelbert Cuyp the Draftsman**

Like all artists, Cuyp reacted to his surroundings and his background, which provided stimuli that are largely imponderable. One may conjecture, however, that his thorough familiarity with the insular setting of Dordrecht and its neighboring villages opened his eyes for the particular beauty of the Hoekse Waard and Alblasserwaard and other reclaimed lands. Whatever one may think about evaluating an artist’s personality, Cuyp certainly seems to have loved nature as he knew it in his immediate surroundings and, later, to have been taken by the vistas that the hilly terrain in the eastern part of Holland provided. They presented different challenges, and he changed his “style” accordingly.

As far as one can establish an artistic personality on the basis of the artist’s work, Cuyp was clearly not a revolutionary who was out for change. The general conservative nature of his hometown and more specifically of the circles in which he and his father were moving facilitated the adaptation of existing artistic achievements. Cuyp was active as a draftsman at a time and in a culture that witnessed the representation of nature as a more sophisticated and popular activity than ever before in Europe. He came late on the scene in the sense that those aspects of depicting nature that interested him had all been developed: perspective and space had been mastered, the panoramic view had been worked out, the simple rural subject matter had been established as an acceptable, even attractive subject.

Cuyp took advantage of all these achievements and used them to shape his own vision of the Dutch countryside. He used the village views of his older contemporaries as a point of departure for his own: he noted the colors in the works of Savery and Bloemaert and changed them into a personal, integrated, and fundamental part of many of his landscapes. Cuyp’s artistic and technical mastery — in the true sense of the word — turned the achievements of the past into a base to start from rather than a level to attain. In his drawings Cuyp conveyed the beauty of nature for its own sake, rather than as a setting for man or for the pleasure and relaxation it provided. The allusion to Arcadia is absent from the drawings; it was added to the paintings in which a more public purpose required the depiction of grander expectations.
1. I am much indebted to the partial manuscript catalogue raisonné of Aelbert Cuyp’s drawings prepared by J.G. van Gelder and Ingrid van Gelder-Jost circa 1964 – 1975. I am presently editing and completing the catalogue for publication, together with a study of Aelbert Cuyp as a draftsman.

2. His drawings include no biblical scenes or history subjects, and only three portraits (of superior quality, witness cats. 108, 109).

3. Verisimilitude is difficult to substantiate in individual instances. J.G. van Gelder and I. van Gelder-Jost addressed this issue in Poughkeepsie 1976, 61 – 69, and Washington, Denver, and Fort Worth 1977, 59, 60, no. 57; Brooks 1993, 71, also took up the issue. As the Van Gelders concluded, whenever a subject or site can be checked, Cuyp observed topographical truth (except in foregrounds). By inference this holds for similar views. Martin Royalton-Kisch wrote an illuminating study on the role and history of drawing from nature, emphasizing the beginning of the seventeenth century and selecting impressive drawings to illustrate his points, in Antwerp and London 1999.

4. Both Van Goyen and Molyn assigned a significant role to van in their autonomous drawings, frequently stereotyping their activities.

7. Beck catalogued Van Goyen’s sketchbooks, whether existing or reconstructible, in a separate section (see Beck 1992, 11 254 – 315); the many sheets of the 1650 – 1651 sketchbook are listed and partly illustrated under no. 847.

8. In spite of the different subject matter and “style” of works by Cuyp and Claude Lorrain, the relationship between the self-contained aspect of a drawing and its role as a source for a painting in Cuyp’s case is similar to Claude Lorrain’s approach, as described by Roethlisberger 1968, 11 8, 9.

9. Studies on both artists appeared recently, both in the form of exhibition catalogues: Amsterdam 1992 and Amsterdam 1982.

11. Although moistening black chalk with water (or more likely with the tongue) is described by Meder 1919, 110, the procedure is usually omitted from descriptions of drawings. Only catalogues recently published by de Courtaud pay attention to this basic feature of many drawings in black and also in red chalk (most consistently in New York and London 1986; Van Oosterzee 1992, 29, also mentions it). Moistened black chalk is often misinterpreted as brush and black watercolor or pen and ink or, sometimes, as oiled black chalk.

12. To the first category belongs the drawing Country Road Bordering a River, which is dated 1613, in the Fondation Custodia (Institut Néerlandais, Collection Frits Lugt) in Paris (Brussels, Rotterdam, Paris, and Bern 1968 – 1969, no. 2). Among Cuyp’s fully colored, “finished” drawings should be mentioned A Winter Landscape in the Fogg Art Museum, Harvard University Art Museums (Collection Maida and George Abrams) because having been mounted on a panel until recently and framed, it demonstrates the custom to make such drawings as little paintings to be hung on the wall. This drawing and one of the earlier category are discussed by William W. Robinson in Amsterdam, Berlin, and London 1991 – 1992, nos. 24, 25, with a fruitful discussion of the complexities in establishing a chronology of Cuyp’s drawings; the drawing is illustrated in a contemporary frame in Amsterdam 2000b, 121.

13. The resemblance between Avercamp’s Flat Landscape with a Windmill, a Village, a Church and a Farm Building in Berlin and drawings by Cuyp (as rightly suggested by Royalton-Kisch in Antwerp and London 1999, no. 29) concerns the subject, space, and composition rather than the use of the brush or the color, since Avercamp sketched his remarkable panorama with the brush only, in blue with touches of other colors and some bodycolor. Pieter Saenredam’s View of Beeching Houses near Haarlem (dated 1617 but probably drawn later after a work of that year) and Studies of Two Trees on the same page (Kupferstichkabinett, Berlin) are also drawn entirely (or almost entirely) with the brush (ill. in Amsterdam 2000b, 31).

15. The colors, partly mixed, are mainly yellow, green, blue, gray, and pink (for the roof). Paris and Hamburg 1985 – 1986, no. 118; ill. on xxiv; 29; Amsterdam 1999, 219, no. 193; Antwerp and London 1999, 44 – 46, fig. 40.

16. Although the contrasting and preserving effect of gum arabic in Cuyp’s drawings is an integral aspect of the appearance of the drawing, whether under glass or not, the actual presence can be seen only in reflecting light, therefore without the interference of glass or Plexiglass. Cuyp’s practice was adopted by an artist who imitated him (Joh van Almeloven) and another one who copied him (Frenkx Dabbelts). It was described as a personal feature of Cuyp’s work by Christian Josi in Plaat van Amstel 1821, 21 107, 108, and it was recognized by J.G. van Gelder and I. van Gelder-Jost (Poughkeepsie 1976, nos. 46, 47, 48, 50, 63, 66, 68). Samuel van Hoogstraten 1678, 32, wrote about gum arabic for fixing black chalk and similar materials (but only as used by submerging a drawing in a watery solution of the gum). Meder 1919, 104, 110, 116, 191, discussed the medium broadly, and recently Royalton-Kisch reviewed other early references to gum arabic (in Antwerp and London 1999, 132, under no. 34). Cuyp’s use of gum arabic remained an exception.
17. See Pieter Melyn’s, *Distant View over Flat Land with a Road and a Waterway in the Foreground* (Rijksprentenkabinet, Amsterdam, inv. RP-T-1948-405), illustrated in color in Amsterdam 1987, no. 22, and in Antwerp and London 1999, no. 34. The date on this most remarkable drawing, signed and dated by Pieter Melyn but so unusual for him, seems to be written as 1630, but according to Beck 1998, no. 47, more likely should be read as 1636. The drawing resembles work by Hendrick Avercamp and Pieter Saentredam (who never applied gum arabic over their drawings).

18. Some of Cuyp’s sketchbooks can be reconstructed partially on the basis of the paper used, watermarks, size of the sheets, drying folds, and by the smudging that appears in the same place on each sheet caused by viewers leafing through the sketchbooks. Sketchbooks or drawing books were frequently vehicles for like drawings, as were the sketchbooks by Jan van Goyen that are preserved or can be reconstructed (see note 7). A study of the history and function of the sketchbook and the album would be a rewarding enterprise. (The discussion of Claude Lorrain’s sketchbooks, drawing books, and albums by Marcel Roethlisberger [1968] would be an obvious starting point.) The sketchbook with thirty-nine leaves representing mainly subjects from the environs of The Hague in the Rijksprentenkabinet, Amsterdam (Amsterdam 1987; 36), is one of the few Dutch seventeenth-century sketchbooks that has not been dismantled.

19. The function of the series as a format in the arts has not been studied. Such a study might lead to a better understanding of tapestries, prints, and paintings—any works of art that in series have a significance beyond the sum of the individual items. The exhibition *Lærrijke Reeksen* and its catalogue by B. L. D. Ilke (Museum Boijmans Van Beuningen, Rotterdam, 1966), and many of her exhibitions demonstrated various functions of the series.

20. The most recent and best assessment of the seminal significance of the two series is found in Gibson 2000, 1 – 31, 47, 173, 174, with bibliography.

22. The village of ‘s-Gravendeel is situated on the Dortse Kil and had a ferry link to nearby Dordrecht. Here the topography is correct. The drawing was illustrated in New York 1998, no. 54.

24. Amsterdam, Rijksmuseum (no. A 1793; Dordrecht 1977, 26 – 27, no. 2; Chong 1992, no. JC 76). The year before, he had painted the same subject (formerly in the Van Nesselrode Collection; Reiss 1975, 199 ill.; Chong 1992, no. JC 75) with a different background. The interpretation of the figures as portraits was suggested by Reiss.

25. The prints of the series entitled *Diversa animalia quadrupedia...* are listed by Hollstein, under Persijn, nos. 11 – 23. The drawing in the Albertina, Vienna, was recognized by Jaap Bolten and illustrated by Van Gelder and Jost 1969, 101, note 14, fig. 1.

26. As late as 1649 the father used a drawing by Aelbert (London, British Museum; Hind 1915 – 1932, 21 no. Cuyp 4) for the background behind the portrait of Michiel Pompe van Slingeland as a six year old in the guise of a hunter (see Gordenker essay, fig. 5; Dordrecht 1977, 38 – 39, no. 8; Dordrecht 1992, no. 30).

27. Jan van de Velden’s *Landscape with a Man at a Draw-Well* (119 x 316 mm) is one of a series of eighteen Landscapes and Ruins (Hollstein 1949 – 73; nos. 173 – 195; this particular print is in 34:100, no. 192).

28. For instance, the drawing by Gillis van Coninxloo, *View in the Woods in the Van Regeren Altena Collection*, Amsterdam, ill. in J.G. van Gelder, Jan van de Veldé (1593 – 1641); Terknaar Schilder (The Hague, 1933), pl. 1.

29. Two drawings made by Anthonie Waterloo early in his career, formerly in the Oskar Huldschinsky Collection in Berlin (sale Berlin, Paul Graupe, 3 Nov. 1931, nos. 99 and 100, illustrated; no. 98 may have been similar), were clearly influenced by Aelbert Cuyp’s Environments of Dordrecht Group. Their sizes (c. 29 x 35, 19 x 29, 19 x 29 cm) were also similar to Cuyp’s. No. 100 was later in the Klaver collection, Amsterdam (Amsterdam 1993a, no. 52, ill. in colorful; present location not known).

30. As mentioned by J.G. van Gelder in Dordrecht 1977, 112. More than eighty lots of drawings, some with more than one item, were among the drawings and books of Matthijs Balen and Jacob van Meurs, both deceased, held in Dordrecht, 23 – 24 July 1767 (Lugt 1938, no. 1629). Matthijs Balen probably was the historian of that name (1611 – 1691) whose Beschryvinge der Stad Dordrecht in two volumes was published in 1677. The only copy of the auction catalogue was recorded by Frits Lugt in the printroom in Dresden from where it apparently was removed to Moscow with parts of the library at the end of World War II. Recent efforts to find it there were in vain.
Orpheus Charming the Animals

I

In his *Metamorphoses* (book 10, lines 86–105), Ovid narrated the tale of Orpheus, who not only charmed wild animals and birds with his playing and singing, but also attracted trees that sheltered him from the sun. Cuyp’s graceful branches and lacy foliage gently shade Orpheus, cloaked in red and playing his viol. A wide assortment of wild and domesticated animals gathers to listen. Nearest him are several dogs, a cat, and a monkey, often considered the mirror of man. To the right are a large dromedary and a macaw resting in the tree above. Silhouetted on a distant ridge are an ostrich, elk, and elephant. Domesticated animals such as cattle and sheep graze at the left, while two fine jaguars dominate the immediate foreground. The brilliant patch of light in the middle ground, which creates rich shadows in the surrounding areas, anticipates Cuyp’s later specialized light effects.

The *Metamorphoses* was widely known in the sixteenth and seventeenth centuries through translations and illustrated editions, and the subject of Orpheus was occasionally taken up by artists, particularly by specialists in painting animals, such as Cuyp’s contemporary Paulus Potter (*Orpheus*, dated 1650, Rijksmuseum, Amsterdam). The most important influence on Aelbert Cuyp was Roelandt Savery, who painted at least twenty-three depictions of Orpheus Charming the Animals, as well as numerous paintings of such related subjects as the Garden of Eden and Noah’s ark. Like Savery, Aelbert Cuyp arranged his beasts in luxuriant and naturalistic landscapes: here he profiled an elephant against a distant panorama and shaded other animals under a grove of trees—a composition very close to Savery’s in his *Orpheus* in Frankfurt (see Wheelock essay, fig. 18). In addition, Cuyp may have modeled the two jaguars after a Savery drawing of jaguars that was reproduced in Crispijn van de Passé’s drawing handbook of 1643, which also illustrates other exotic animals similar to those seen in Cuyp’s painting. It is possible that Cuyp saw Savery’s drawings before they were reproduced or encountered individual prints before they were compiled into a volume in 1643. The jaguars reappear in several other works by Aelbert Cuyp as well as in a painting by his father dated 1639.

Aelbert Cuyp may have based his depictions of some of the rare animals on stuffed specimens. The pangolin, the spiny Asian mammal seen at right, was just the kind of exotic creature that was preserved and displayed in a Cabinet of Wonders, a collection type that had long been favored in European aristocratic circles and was finding growing popularity in the Netherlands in the early sev-

---

88
enteenth century. Rare animals had been an almost constant theme in European art since antiquity, and occasionally curious beasts were brought back to Holland by Dutch trading ships.

Cuyp painted three versions of Orpheus, beginning in the first recorded year of his career, 1639. The imposing scale, complexity, and detailed finish of the exhibited picture mark it as his first significant artistic statement. At about the same time, Cuyp painted a much smaller treatment of the subject on wood (fig. 1). Many of the same animals and details reappear, and the distant panorama is almost identical. The smaller painting should not be considered a preparatory work in the conventional sense because the composition remains distinct, but its scale and simpler composition indicate that it was an initial attempt at mastering a subject that Cuyp then developed in a more challenging picture. Also very close in style and subject matter is the recently discovered Adam Naming the Animals (fig. 2), This work is signed and dated 1639, providing firm evidence for dating the large Orpheus. About 1645, Cuyp returned to the subject of Orpheus yet again (marquess of Bute, Mount Stuart). This exceptionally large canvas retains certain features from the earlier works, including Orpheus' pose and details such as the kneeling greyhound and the cat. In all three versions, Cuyp set Orpheus in a vast landscape and surrounded the figure with a variety of wild and domesticated animals. Orpheus is always shown playing a violin, or lira da braccio, as was typical of Netherlandish representations of the subject.

In his commentary on Ovid appended to Het Schilder-boek of 1604, Karel van Mander associated Orpheus with artistic inspiration. Orpheus' musical and poetic eloquence, along with his ability to tame animals, also made him a symbol of wise and peaceful government. Citing Horace, Van Mander connected Orpheus with the power "to build city and law, in order to live justly." In addition, political pamphlets sometimes used Orpheus to represent harmonious government. Aelbert Cuyp's diminutive Orpheus now in Dessau may have acted as an allegory of good government in an official setting, for it may once have belonged to the stadtholder Frederik Hendrik and Amalia van Solms. Nonetheless, one of Cuyp's principal motivations for painting the subject of Orpheus must have been the opportunity to depict a wide range of unusual animals that emphasize the general theme of a bounteous and harmonious nature.
Open Countryside with Shepherds and Animals

• This peaceful panoramic landscape is one of Cuyp’s earliest depictions of the native Dutch landscape. Seen from a low vantage point, a sandy path leads the viewer from the bottom edge of the picture past a group of goats and a herd of cows toward a sunny elevation populated by a flock of sheep and a group of shepherds silhouetted against the bright sky. The vast expanse of a “marshy distance” can be glimpsed beyond. The figure pointing to the distance suggests that the scenery extends far beyond the borders of the picture, a motif also occasionally employed by the painter Herman Saftleven from Rotterdam (see Wheelock essay, fig. 15). The deep recession of the space is underscored by both the shaded left foreground with the two goats, which functions as a repoussoir, and by the diagonal formation of the clouds. At the same time, the goat that is placed parallel to the picture plane functions as a barrier and prevents the viewer’s eye from plunging into the depth of the seemingly infinite space.

Although lighter in tone and not as monochromatic as Jan van Goyen’s works of that period (Cuyp’s paintings were to become more monochromatic a short while later), this sandy landscape betrays, in composition, the influence of the Leiden artist and resembles, in general, Van Goyen’s dune landscapes painted between 1629 and circa 1631. Nonetheless, while similarities exist in the brushwork of the two artists, Cuyp’s handling of the paint is denser and more vigorous than Van Goyen’s.

Close in date to the present picture is a lost painting, formerly in the Kaiser-Friedrich-Museum in Berlin. The panoramic views into the distance are comparable in the two pictures, as is the manner in which the cattle are depicted. The striking resemblance between these goats and cows and the animals in the prints of Reinier van Persyn after drawings by Jacob Cuyp, published with the title Diversa animalia in 1641 (fig. 1), suggests that Cuyp followed his father’s models for his early portrayals of animals and livestock.
Portrait of a Family in a Landscape

Jacob and Aelbert Cuyp, 1641, oil on canvas, 155 x 245 (61 x 96 7/8s). Collection the Israel Museum, Jerusalem, Gift of Mr. and Mrs. Joseph R. Nash, Paris

In sweeping countryside broken in the distance by some cattle and windmills, a family gathers to welcome their eldest son, who returns from a successful hunt accompanied by his servant and dog. He offers a game bird to his youngest sister, who rushes out to greet him. Sheltered by a tree, the rather stiff and evenly spaced figures turn toward the viewer. The portrait's awkwardness is partly relieved by the strongly modeled landscape marked with strong light and long shadows.

The painting is a collaborative effort between Jacob Cuyp, who was responsible for the figures and the foliage in the immediate foreground, and Aelbert Cuyp, who rendered the landscape background and the trees in a thick, yellowish brushwork typical of his early paintings. Jacob Cuyp was Dordrecht's principal portraitist and, almost certainly, the director of this commission. In the same year, Jacob and Aelbert Cuyp collaborated on another group portrait (fig. 1), which shows a couple seated in a landscape with their child. Both works are signed solely by Jacob Cuyp. The two artists worked together on at least two other occasions: a painting of about 1640 showing shepherds in a landscape (Musée Ingres, Montauban), and a portrait of two children dated 1645 (private collection).

The theme of the returning hunter often had amorous or marital references in Dutch painting (see cats. 26, 27, 40), but here the figures seem to be members of the same family. In this context, hunting suggests an abundant household, a theme reinforced by the grapes held by the girl at the right, which can be associated with nature's fertility.

Game and fruit commonly denoted a bounteous farm or estate. The servants who appear at the far left and right edges (they do not have their ages inscribed below) support the well-being of the family: The manservant has assisted in the hunt, while the maid holds chickens and bellows, indicating that she will soon be preparing a meal. The painting as a whole indicates that a prosperous and harmonious family depends on agricultural gifts such as fruit, game, and even the dairy products represented by the milking of cows in the distance.

Emile Michel was the first writer to notice the painting in 1892, when it was in the Rothschilds' opulent mansion Ferrières outside Paris. Noting that it was attributed to Jacob Cuyp, Michel found that "la composition est un peu gauche." By 1952, when the work was auctioned in Paris, the attribution had been changed to Aelbert Cuyp. The compiler of that sales catalogue had already grasped the nature of Jacob and Aelbert Cuyp's collaboration. The painting was found to be "already very typical in the distant landscape and animals. For the figures Aelbert has still used the manner of and perhaps with the collaboration of his father, Jacob Gerritsz Cuyp."

Several group portraits by Jacob or Aelbert Cuyp appear in Dordrecht inventories in the seventeenth century. One example is from the estate of the wine dealer Abraham Sam, who died in 1692: "A painting in which is depicted the whole family of their parents, by Aelbert Cuyp."
The broad rivers passing near Dordrecht provided Cuyp with numerous opportunities to portray life along the water's edge. Here, from a low viewpoint near the bank of one such river, Cuyp indicated the wide expanse of this countryside, whose flatness is relieved only by a few windswept trees and a lonely hut with a large chimney. As clouds swirl overhead, daily life unfolds in predictable rhythms: cattle rest on the bank, sailboats glide quietly across the smooth waters, and two workmen busy themselves with boats filled with peat. One of the workmen has pulled his boat (a plemp) to shore, probably to unload the peat in the wheelbarrow that lies upside down behind him.

Peat not only had domestic uses, such as cooking and heating, but was also essential for a number of industries, such as brick and pottery making, beer brewing, and cloth bleaching. And, as Marika Spring notes, vivianite, one of Cuyp's favorite pigments, was made from peat. Nevertheless, the production and transportation of peat hardly seem like subjects that would have inspired Dutch artists and poets. Nevertheless, a surprising number of poems and pictorial images celebrate these seemingly mundane activities. For example, Claes Jansz Visscher (1586/1587–1652) executed a number of prints depicting the making of peat. Often included in the decorative borders of maps—borders whose texts and images helped express the ideals and character of the land and the people (fig. 1)—such depictions of daily activities emphasized the industry of the Dutch in making their land more productive. The making of peat was also featured in 1618 in Deliciae Batavicae (Batavian Delights), a series of prints of topographical scenes and images of daily life published by Jacobus Marco in Leiden. In this instance, however, the text accompanying the illustration of peat diggers accords peat an importance beyond being a significant industry. Peat is celebrated as a Dutch miracle: "Come from afar you physicians, see the miracles of the Batavian lands; the water and marsh yield their own fire." Adriaen van de Venne (1589–1662) also included images of peat diggers in his 1626 watercolor album 't Lants Sterckte (The Land's Strength), some of which he derived from Marco's publication.

Cuyp probably chose to depict this theme because the transport of peat was commonly seen when traveling through the countryside. Nevertheless, his river view projects a positive image of the peat industry and of the workmen who were responsible for its distribution. The boats are well maintained, and the peat is neatly stacked in each vessel as the workmen undertake their deliveries. Thus, Cuyp's approach to the subject of peat is similar to that found in Deliciae Batavicae, 't Lants Sterckte, and the decorative borders of maps, which celebrate the productivity of the land and the industriousness of its people as integral components of the Dutch Republic.

Despite its convincing atmospheric character, Cuyp did not paint this scene from life. As in so many other instances, he executed this work on the basis of a drawing made at the site (cat. 64).
Cattle and Cottage near a River
Cattle and Herders,
with Mariakerk, Utrecht

That Aelbert Cuyp traveled around the Netherlands on a number of occasions throughout his career is evident from his drawings and paintings. And Utrecht must undoubtedly have been a frequent destination, not in the least because of the strong connections Cuyp’s family had with the town.¹ As a result Cuyp included buildings and monuments from Utrecht and the town’s environs in several of his early drawings and paintings (see cats. 47, 48).²

Remarkably, in this picture Cuyp depicted the Mariakerk, a large church located in the center of Utrecht, nestled between the trees beyond a gently rolling imaginary landscape.³ Behind the church a sunny flat landscape extends into the distance. In a manner similar to that in Open Countryside with Shepherds and Animals (cat. 2), the viewer is taken into the painting along a sandy path that leads past a herd of cattle on the left and two shepherds enjoying a rest in the sun on the right. The general atmosphere of this sun-drenched landscape populated by shepherds and cattle is a peaceful one evoking an afternoon in a countryside where man and nature coexist in perfect harmony.

Cattle and Herders, with Mariakerk, Utrecht demonstrates the stylistic refinements characteristic of Cuyp’s paintings from the early 1640s. The trees have become more elegant, the recession of the landscape reveals greater subtlety, and the impasto in the sky effectively evokes rays of light. Only the cattle in the left foreground are still reminiscent of those in his earlier works, such as the paintings in Dulwich and Rotterdam (see cats. 2, 4).⁴

J.G. van Gelder and Ingrid Jost first noted in 1969 the relationship between this painting and two drawings by Cuyp.⁵ One drawing, formerly in a collection in Iowa (fig. 1), shows a landscape with two large groups of trees, while the other, now in Frankfurt, represents the Mariakerk in Utrecht (cat. 47). For this composition Cuyp inserted the view of the Mariakerk into an expanded landscape flanked by the two groups of trees from the drawing formerly in Iowa.⁶

⁶ AR 98
Cattle and Herdsmen, with Mariakerk, Utrecht
River Landscape with Bridge

- Cuyp's painting is a quiet reflection on the care, nurturing, and proper husbandry of the land. The artist has situated the viewer along the near bank of a small inlet crossed by a simple wooden bridge, a vantage point that reveals a landscape in which man has created a flourishing agricultural environment. The contented appearance of the cattle resting in the fields, the well-maintained fences and boats, and the harmonious way in which the farm buildings lie nestled amidst a copse bespeak of man's easy rapport with nature.

  This rapport is also evident in the relaxed demeanor of the group in the foreground that has gathered to discuss the day's affairs. The standing burgher wearing a black hat may well be the owner of the property who has come to speak with the two seated herdsmen and the standing laborer holding a pike. The pike, or more aptly boat hook, indicates that this man works by the water's edge, probably to retrieve logs, some of which can be seen floating in the water. Other logs, already attended to, have been carefully piled near the thatch-covered haystack. Cuyp, however, stressed neither the identity of the individuals nor the actual workings of this specific farm. Rather, his concern seems more general, a reflection on the idea that careful oversight and proper husbandry of nature's resources make not only for a harmonious existence, but also for economic viability.

  The clarity of Cuyp's composition, which he executed with vigorous yet delicate brushwork, has no evident prototype in Dutch painting traditions. Not only is the landscape's horizontal structure striking, but so also is the linearity of his touch, particularly in the pronounced accents that articulate and enliven forms. Cuyp, like Esaias van de Velde and other early seventeenth-century landscape painters, may well have thought first as a draftsman and then only subsequently as a painter. Indeed, in this work, as in so many of his other paintings, he used drawings to establish the fundamental framework for the composition. He developed the general compositional character of the image in a pen and wash drawing now in the British Museum (cat. 66). The specific disposition of the boats near the bridge and the farm on the right is found in a drawing in the Kunsthalle, Hamburg (see cat. 7, fig. 1).

  The importance of the graphic tradition for Cuyp's paintings appears to extend beyond the impact of his own drawings. Similar views of farms situated in copses near wooden bridges are found in early seventeenth-century landscape prints by Haarlem artists, among them Jan van de Velde and Esaias van de Velde. The elegant rhythms of the trees in Cuyp's images, however, are more specifically related to those in the landscape drawings and prints of a Rotterdam artist active in early 1640s, oil on panel, 40.3 × 54.9 (15 3/8 × 21 1/2). Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main.

- Haarlem, Willem Buytewech (see Wheelock essay, fig. 14). In fact, Buytewech's landscape print series, first published in 1616, not only provided stylistic inspiration for Cuyp, but also presented conceptual ideas that foreshadow those found in paintings such as River Landscape with Bridge.

  Buytewech was an artist who had been extremely conscious of the political and social benefits to be gained by peace with Spain — the resulting prosperity, he felt, would be manifest in the nurturing of the land through the diligent labor of all its people. This ideal, explicit in a political print of 1615, is implicit in his landscape series of 1616. Buytewech's prints, which include scenes of laborers reinvigorating the land by clearing and tending the forests and cultivating the soil, are infused with the ideals of Virgil's Georgics. Such images, and the ideas underlying them, had an enormous impact on Cuyp during his formative years. They help explain the extraordinary impact of seemingly straightforward paintings such as River Landscape with Bridge. AKW
River Landscape with Bridge
A River Scene with Distant Windmills

- Together with *Cattle and Cottage near a River* from Rotterdam and *River Landscape with Bridge* from Frankfurt (cats. 4, 6), this picture clearly reveals Cuyp’s early distinctive approach to landscape painting. A vast river—seen from a low vantage point that seats the viewer in a boat—stretches from the immediate foreground. On the banks in the far distance, silhouetted against the sky, are a number of majestic windmills as well as the bell tower of a village church. The deeply receding view toward the brightly lit horizon contrasts with the shaded patch of land and the boat with two men in the foreground. It and an almost identical boat just beyond the bridge in *River Landscape with Bridge* (cat. 6) are based on a drawing by the artist, now in the Kunsthalle in Hamburg (fig. 1).²

The most intriguing aspect of the picture is the simplicity of its composition. Cuyp relied almost exclusively on the use of light and color rather than on any compositional elements, such as diagonally placed paths or clouds, in order to evoke a sense of pictorial depth. Moreover, while both the Rotterdam and Frankfurt pictures include several small figures and herds of cattle in the foreground, in this painting Cuyp eschewed anecdotal details almost entirely. Only traces of human activity are indicated by the farm building nestled beneath the large tree on the right, the windmills and village in the distance, and the boat with two fishermen quietly going about their business. Nothing, it seems, could disturb the general atmosphere of harmony and peacefulness.

Although the picture shows several parallels with works by Jan van Goyen and Salomon van Ruysdael from the late 1630s and the first half of the 1640s, the linearity of the composition, as well as the vigorous handling of the brush, is rather different from the works of these two masters. The tonality of this picture, which ranges from light yellow to greenish brown, remains on the whole lighter and somewhat cooler than Van Goyen’s and Van Ruysdael’s colors. Cuyp also employed a more dramatic mode of lighting, using slightly nervous yellow highlights that play across the different surfaces in the picture.

Cuyp regularly made sketches in the countryside that he later used as models for his compositions. Besides the sketch of the boat in Hamburg, Cuyp used a drawing in the Kröller-Müller Museum in Otterlo as the model for the landscape and a drawing preserved on a sketchbook page (cat. 61) for the distant view of windmills.³
A Pier in Dordrecht Harbor

early 1640s, oil on panel, 44.5 × 75.5 (17 ½ × 29 ¾). Mr. and Mrs. George M. Kaufman

- Cuyp is not known as a marine painter, largely because he never ventured too far from land. Nevertheless, his numerous views of river life are extremely varied and demonstrate a remarkable sensitivity to the changing light and water conditions encountered on inland waterways. He could comfortably set boats in the water, even as he visually contrasted water’s translucent and changing surface with the physical presence of heavy wooden hulls and weighty canvas sails. Cuyp’s pictorial sensitivities were also directed toward human and animal activities revolving around the water, ones that added visual and thematic interest to the inherent beauty of the river scenes.

This luminous painting, executed in the early 1640s, depicts Dordrecht from the northeast as seen from Papendrecht veer (Papendrecht ferry), situated near the small village of Papendrecht on the far side of the river Merwede (fig. 1). To the right of Dordrecht’s city walls rises the thin spire of the Groothoofdspoor, while before this major gateway are docked a number of sailing ships. Ferry transportation was provided by sailboats or rowboats that constantly traveled back and forth across the Merwede. In Cuyp’s painting a small rowboat carrying two burghers, distinguishable by their dress, approaches a roughhewn pier where a group of travelers awaits the return voyage to Dordrecht. Whether or not the travelers on the pier are rural folk or city dwellers dressed for a day in the country (the man holding a rifle presumably went for the hunt), Cuyp has effectively shown the different character of the lands on either side of the Merwede through the figures’ costumes.

Cuyp was particularly intrigued with life along the piers during the early years of his career, perhaps because of the variety of scenarios that could be portrayed in this setting. The inspiration for this interest may have been the Rotterdam painter Simon de Vlieger, who also starkly contrasted the architectural forms of the pier and adjacent buildings with vigorous skies and sun-filled distant river views (fig. 2). De Vlieger, however, differs from Cuyp in that he did not focus on the human aspect of the scene as much as the Dordrecht artist did.

The forceful, even monumental character of Cuyp’s painting comes largely from the juxtaposition of the boldly modeled foreground forms with the light-filled riverscape beyond them. This monumentality is reinforced by the strong emphasis on the horizontal, not only of the pier and the distant horizon, but also of the ripples in the water. With this solid framework firmly established, the sailboats seem to glide effortlessly back and forth, catching the light winds that fill the air. This controlled yet vigorously executed manner of painting is one of Cuyp’s most distinctive characteristics; it is also unlike that of any of his contemporaries. Given the freshness of his touch, it is always surprising to discover that Cuyp often repeated compositional elements in different paintings. For example, the rowboat and oarsman in this work appear, in reverse, in Cattle and Cottage near a River (cat. 4).
According to the Acts of the Apostles (8.26 – 40), Christ’s disciple Philip met an Ethiopian eunuch on the road from Jerusalem to Gaza. Treasurer to Candace, queen of Ethiopia, the eunuch had been to Jerusalem to worship. Philip rode with the eunuch in his chariot and explained that a passage in Isaiah prophesied Christ’s crucifixion. Having arrived at some water, the eunuch asked why he should not be baptized. Philip replied that if he believed with all his heart, he could be baptized. Cuyp depicted the eunuch dressed in sumptuous golden robes, kneeling near a shallow stream as the aged Philip scoops up some water for the baptism. The eunuch’s carriage and servants wait on the ridge above while a page hovers nearby with a large book — the text of Isaiah. With visible skepticism, one of the retinue casually leans on the richly bedecked carriage. A tower and shallow-domed building crown a distant hill, surely a reference to Jerusalem.

Cuyp’s arrangement of figures is dependant on a widely copied painting by Rembrandt of about 1630. Now lost, the composition is recorded in Jan van Vliet’s etching of 1631 (fig. 1) as well as in several painted copies. The characterizations of Philip and the eunuch are similar to Rembrandt’s, as is the disposition of figures and a chariot around a small hillock. Cuyp even repeated details such as the large leafy plants that anchor the foreground. Since Aelbert’s uncle Benjamin Cuyp was strongly influenced by Rembrandt, he probably provided the conduit to Rembrandt’s work.

On the other hand, the impact of Aelbert Cuyp’s picture differs considerably from Rembrandt’s. Where Rembrandt dramatically arranged his figures in a steep vertical pattern, Cuyp dispersed the group slightly within a rich and expansive landscape setting. The eunuch’s pious humility, in contrast to his servant’s arrogance, remains. Cuyp also subtly varied Philip’s pose, so that it is not the traditional gesture of baptism, but actually a subtle variation on a familiar formula. The motif of a page carrying a large Bible is missing in Rembrandt’s composition of 1630, but it does appear in his painting of the subject dated 1626 (Museum Catharijneconvent, Utrecht) and in Pieter Lastman’s picture of 1623 (Staatliche Kunsthalle, Karlsruhe).

As a setting for the biblical narrative, Cuyp carved an almost circular space out of soft vegetation and rocky outcroppings. Feathery foliage frames the scene, while the nearly monochromatic palette further sets off the figures. Aelbert Cuyp seems to have been influenced not just by Jacob and Benjamin Cuyp, both experienced figural painters, but also by Herman Saftleven, who perfected the blending of narrative scenes in rich natural settings. Cuyp’s soft organic forms and whitish tonality are also similar to the work of Gijsbert de Hondecoeter, namely his Landscape with Animals of 1641 (private collection, Boston).

In seventeenth-century Holland, the subject was known almost exclusively as the Baptism of the...
Moor. The Acts of the Apostles had been extensively analyzed by Protestant theologians, most crucially by John Calvin (1509–1564), whose commentaries were published in 1552 and translated into Dutch as early as 1582. Calvin noted that since Near Eastern monarchs often made eunuchs their most trusted ministers, the term eunuch was often employed simply to describe important court officials. Therefore, most seventeenth-century Dutch viewers probably did not realize that the Greek text of the Acts calls the figure a eunuch. Calvin also stressed that the eunuch had studied the scripture but remained modest about his understanding, and was thus ready to be baptized. Quite naturally, the episode was used by Protestant writers as a model of adult baptism. Dutch Remonstrant preachers such as Simon Episcopius (1583–1643) cited the Baptism of the Eunuch as an example of free will because the eunuch’s purposeful study of scripture brought about his salvation.

The freedom of brushwork and a feathery treatment of foliage found in this painting and in related works (cats. 10, 11) suggest an evolution away from Cuyp’s paintings produced in 1641 and immediately afterward under Jan van Goyen’s influence. These later, occasionally awkward canvases are larger, more broadly handled, and more ambitious in scale. This period of Cuyp’s career, dating about 1643, has long confused scholars precisely because their experimental nature seems less advanced than the graceful control of Cuyp’s diminutive river landscapes painted on panel (cats. 4–7). Like Cuyp’s paintings of Orpheus (cat. 1) and Adam Naming the Animals (cat. 1, fig. 2), this representation of the Baptism of the Eunuch demonstrates the artist’s ambition to become a history painter as well as a landscapist—a inspiration that would remain largely unrealized. ac
A Farm with Cottages and Animals

- This ravishingly beautiful — unlined — farmyard scene is one of the most accomplished of Cuyp’s early depictions of the Dutch countryside. The artist has placed the viewer in a sun-drenched pasture populated by herds of cattle and sheep, beyond which extends a vast landscape. In contrast to some of the artist’s other early landscapes where shepherds and peasants rest and converse (cats. 2–5), the two peasants (on the right) in this picture busy themselves with their daily farm chores. The pervasive mood is one of quiet peacefulness, celebrating the wealth and prosperity of the Dutch countryside — and by extension of the Dutch Republic — which is afforded by the harmonious relationship between nature and man.

Among Cuyp’s early pictures are several that combine an idyllic setting of a pasture with humans and animals with a vast panoramic landscape. Here Cuyp placed a stronger emphasis on the gradual recession of the space than he did in other paintings through the use of a diagonal extending from the farmhouses to the small trees in the distance. This rather large picture — which must have been commissioned rather than painted for the open market, as some of Cuyp’s smaller early works may have been — reveals the artist’s distinctive, more mature approach to composition, lighting, and the use of atmospheric effects.

The debate around the dating of this picture sheds some light on the changing appreciation of Cuyp’s early oeuvre. Hofstede de Groot considered it a “very large early work” in the style of Cuyp’s earliest known landscape, dated 1639, now in Besançon.1 Reiss as well as the authors of the Dordrecht exhibition catalogue of 1977 generally shared this view, largely because the work bears no resemblance with Cuyp’s slightly later, so-called Van Goyenesque works.2 However, by 1987 Chong had noted that the picture’s brushwork was neither close to the painting from Besançon nor as “monochromatic and calligraphic” as his works of about 1641, but was instead closer to his later paintings, especially in the foliage. He therefore concluded that the picture should be dated to about 1642, at which time Cuyp must have been “capable of working simultaneously in two styles.”3 But why Cuyp would have felt it necessary to work in two considerably different styles at the same time is not clear from this argument. In his dissertation, Chong noted the more accomplished handling of the spatial recession, the palette that is markedly different from his early pictures, and the “more flowing foliage.”4 Based on these considerations, he revised his earlier opinion and dated the picture to 1642/1643, which immediately precedes the period when Cuyp began to change his approach and turn his attention to the works of Dutch artists returning from Italy, in particular, to the works of Jan Both. AR
A Farm with Cottages and Animals
Wooded Landscape with an Artist

This work, a strikingly large and bold depiction of the edge of a forest, is Cuyp's only-known woodland scene. It is also one of the rare instances in which he depicted an artist, with sketchbook in lap, recording the scene before him. Perhaps the artist's interest, and that of his companion, lay in the dramatically raggy trees with broken trunks that guard the forest's inner realm or, perhaps, in the two picturesque younger trees near the path emerging from the woods. This path seems to have been frequented by travelers of all types, for one sees not only riders on horseback, but also a farmer returning home after haying and three elegantly dressed city burghers. The presence of these burghers, who have paused to converse while on their country outing, indicates that this woodland site was near an urban center, presumably Dordrecht. Their presence also suggests that the site was deemed worthy of an excursion, comparable to the "pleasure places" near Haarlem that Jan van de Velde, Esaias van de Velde, and Willem Buytewech depicted in their landscape print series from the 1640s.

The painting would seem to indicate the way Cuyp, with sketchbook in hand, traveled into the countryside to draw after nature. As with many artists, he clearly followed the advice so clearly articulated by P.C. Ketel in Karel van Mander's 1604 treatise on paintings: "take charcoal and chalk, pen, ink, paper / and draw what you see, whatever pleases your eye." As Ketel recommended, Cuyp would then return home to paint, bringing the drawings "to life in colors / which you have ground yourself." One can imagine Cuyp sitting before such a forest bordered by rugged, weathered trees, for he often focused on precisely such elements in his chalk drawings of the early-to-mid 1640s (cats. 51, 52, 55). Nevertheless, no known drawing served as a model for any of the trees in this painting.

Cuyp's brushwork in this large painting on canvas is distinctly broader than that of his small-scale panel paintings executed during the first years of the 1640s. For example, the tree branches are heavier and the leaves are less precisely defined than in River Landscape with Bridge in Frankfurt (see cat. 6). The differences almost certainly relate to changes in scale and support, but also suggest a different period of execution. An indication of date comes from the costumes worn by the city burghers and the artist and his companion, which relate in style to those found in Dutch paintings from the early-to-mid 1640s.

Although Cuyp generally preferred to depict scenes that included distant landscapes, the only suggestion of such a view is provided by the small figure of a man seated to the left of the forest who appears to gaze across a wooded valley. The source of inspiration for this focus upon the forceful character of the forest edge is unknown. Although this compositional type is unusual for Cuyp, it is one associated with Herman Saftleven or Simon de Vlieger, artists whose work seems to have influenced Cuyp on other occasions during the 1640s (see cats. 8, 19). However, Saftleven and De Vlieger apparently only began depicting forest scenes in their etchings and large-scale paintings during the mid-1640s, slightly after Cuyp executed this work. Nevertheless, as few of these woodland landscapes are dated, the relationship of this subject in the work of these three artists cannot be firmly established.

Wooded Landscape with an Artist
The first critic to describe Cuyp’s work was Arnold Houbraken, whose treatise provides the biographical framework for the study of Dutch seventeenth-century artists. As a native of Dordrecht, this artist-theorist had ample opportunities to view Cuyp’s work, thus his well-informed comments are important for assessing the artistic qualities of Cuyp paintings and drawings that were most admired by early eighteenth-century connoisseurs. Houbraken’s description of Cuyp’s work is particularly germane to Dordrecht Harbor by Moonlight, for he listed among Cuyp’s specialties depictions of “still water with ships.” More important, Houbraken admiringly noted how Cuyp “paid much attention to the time of day in which he portrayed his subjects, so that one can distinguish in his paintings the misty early morning from the bright afternoon and that again from the saffron-colored evening time.” He continued, “I have also seen various moonlight scenes by him which were very realistic and arranged in such a way that the moon was beautifully reflected in the water.”

Cuyp’s ability to convey the character of different times of the day and varied weather situations is an aspect of his art that has continued to elicit the admiration of collectors and connoisseurs. This atmospheric painting of sailboats at a dock across the harbor from Dordrecht’s Rietdijkspoort (see Wheelock essay, fig. 1) is one of the few surviving moonlight scenes by Cuyp. It is a supremely quiet painting, the only sounds imaginable being the gentle lapping of water against the wooden hulls of the moored ships. Under darkly billowing clouds, the moon casts a cool light on the boats’ sails, the windmill, and the ripples of the water. A few figures stand on the pier, perhaps travelers awaiting the early morning ferry to destinations along the Merwede or one of the other waterways passing by Dordrecht.

The earliest reference to this painting is probably that found in the 1719 inventory of Elisabeth Francken, widow of Matthijs vanden Broucke, which describes “a moonlight” as a pendant to “a lightning,” almost certainly Cuyp’s dramatic Dordrecht from the South, in a Storm (fig. 1). The paintings, which have identical dimensions, remained together until 1802. The artist most likely intended them as pendants: they both feature unusual light and atmospheric phenomena, ones that Cuyp rarely explored in his work.

In the mid-1640s, Dutch painters were fascinated with depicting unusual light and weather conditions. The origins of this interest are not entirely clear, although the depiction of ephemeral

---

1 Aelbert Cuyp, Dordrecht from the South, in a Storm, Foundation E. G. Bührle Collection, Zurich

Dordrecht Harbor by Moonlight

c. 1643–1645, oil on panel, 76.5 x 106.5 (30 ⅜ x 41 ⅞). Wallraf-Richartz-Museum, Cologne
light and weather conditions had long been recognized as one of the most difficult challenges a landscape artist could face. Apelles, the celebrated Greek painter of the late fourth century B.C., was often cited as an artist worthy of emulation, partly because he, reputedly, could depict thunder and lightning. Van Mander noted Apelles’ achievements in his theoretical poem *Den grondt der edel vry schilder-cost* (1604) when urging landscape artists to capture a variety of natural effects, including the color of reflections created in moonlight. Depictions of weather also entered into seventeenth-century disputes about the paragon, which contrasted the relative merits of painting, poetry, and sculpture. Philips Angel, who published a defense of the art of painting in Leiden in 1642, wrote that, unlike sculpture, painting can “depict a rainbow; rain, thunder, lightning, clouds, vapor, light, reflections … the rising of the sun, early morning, the decline of the sun, evening, the moon illuminating the night, with her attendant companions, the stars, reflections in the water.”

The visual tradition for night scenes in Dutch art stems from prints made by Hendrick Goudt (1580 / 1585 – 1648) after paintings by Adam Elsheimer (1578 – 1610) (see cat. 41, fig. 1). Goudt’s impact was particularly important for the Haarlem printmaker Jan van de Velde, who exploited the graphic medium to depict the times of the day, the seasons of the year, and windy and rainy weather. However, with the exception of early seventeenth-century marine specialists who depicted stormy seas, painters of Dutch landscapes rarely represented extreme weather conditions or moonlight until the late 1630s and early 1640s. The artist who first developed an interest in such scenes was Jan van Goyen. Other artists soon followed suit, among them Aert van der Neer (1603 / 1604 – 1677), Simon de Vlieger, and, of course, Aelbert Cuyp. His *Dordrecht Harbor by Moonlight* is one of the largest and most hauntingly beautiful of these night scenes, capturing the sense of quiet and serenity evoked by moonlight flooding across this inland waterway.

...
In his Eerlycke tyfkorting of 1634, the poet and playwright Jan Hermanz Krul published a number of love songs that focus on the romantic yearnings of shepherds and shepherdesses. The pictorial settings described by the poet, as well as the engraved images accompanying these songs, are remarkably similar to a number of Cuyp’s pastoral scenes, including this one. For example, one of Krul’s songs introduces the shepherdess Galatea in the following manner: “Not long ago, before the sun sent its golden rays from Heaven’s top over the misty earthy valleys, I saw my beloved Galatea driving her flock from the cold dry beach, coming barefoot through wet sand to the heath, in order to graze her sheep on the grassy land.” The engraving accompanying this love song (see Wheelock essay, fig. 5) depicts a young man gesturing toward the comely Galatea, much as the shepherd in Cuyp’s painting points toward a shepherdess as she passes through the landscape tending her herd.

Cuyp’s lyrical scene does not depict a specific text, but it does share the spirit of Dutch pastoral literature, whether the songs of Krul, the poems of the Nederdagschen helicon, or the writings of J. van Heemskerk (see Wheelock essay). Much as these Dutch poets used evocative words to create a setting for their human encounters, so Cuyp created the pastoral mood of his scenes with carefully chosen pictorial motifs and atmospheric effects. In this instance, he situated the shepherd group on a hill before a copse of windswept trees, while he bathed the misty river valley beyond in golden light. Distant hills, one of which is covered by buildings that have the character of ruins, enhance the painting’s Arcadian character.

Cuyp seems to have imaginatively created his setting from views he saw on a trip along the Rhine in the early 1640s. The distant hill surmounted by buildings is reminiscent of Elten, which was situated near the confluence of the Rhine and the Maas. The irregularly shaped stone table in the left foreground apparently depicts a stone marker on a hill overlooking the Rhine near Rhenen. Anthonie van Borssum (1629 / 1630 – 1677) made a drawing of a six-sided stone table on a hill overlooking the Rhine that almost certainly represents the same structure. Cuyp was probably working from this location when he made a drawing of the landscape surrounding Rhenen (see Haverkamp-Begemann essay, fig. 3), a study that served as the basis for the background of a 1641 family portrait (see cat. 3, fig. 1) and for his View on a Plain (c. 1644, Dulwich Picture Gallery, London). Both the Dulwich painting and Landscape with Shepherds and Shepherdesses include a standing shepherd that is based on a chalk drawing now in a private collection in Vorden. Cuyp derived many of the sheep in Landscape with Shepherds and Shepherdesses from studies that appear on another of his chalk drawings.

"AKW"
Landscape with Shepherds and Shepherdesses
Herdsman with Cattle

- Since the nineteenth century Herdsman with Cattle has vied with several other works by Cuyp for the accolade of being the master’s most accomplished work.1 When the English critic and essayist William Hazlitt saw the painting he extolled it as “the finest Cuyp perhaps in the world,” praising the light and atmospheric coloring as having been “woven of ethereal hues” and describing “the tender green of the valleys beyond the gleaming lake, the purple light of the hills” as having “an effect like that of the down of an unripe nectarine.”2 With the exception of the painter John Ruskin, who parodied Hazlitt’s praise (and prose) by describing the coloring of Cuyp’s sky as “very like an unripe nectarine,” the painting has been much admired by critics and the public alike.3

The picture belongs to a group of works from the mid-1640s in which Cuyp began to explore the use of Italianate and contre-jour lighting. In the foreground two herdsmen rest and converse on a sunny pasture, a recurring motif in Cuyp’s paintings.4 At the foot of the hills are the rest of the herd and more herdsmen, while beyond the stagelike plateau of the foreground, a flat and watery landscape extends toward the far hills. The deep orange-yellow tints of the sunlight and the long shadows clearly indicate that this is a late sunny afternoon scene.5 The impressive luminosity of the painting and the accomplished handling of the atmospheric effect are remarkable for a work that must date in the mid-1640s.6 The reflections of the light on the edges of the foliage in the foreground already point to Cuyp’s later pictures in which this becomes one of the most characteristic features.

This painting represents one of Cuyp’s earliest endeavors in combining native rural scenes — ordinary Dutch peasants and herdsmen tending to their livestock — with a setting and lighting effects inspired by Dutch Italianate painters such as Herman van Swanevelt, Claes Berchem, Herman Saftleven, and, perhaps most significantly, Jan Both.7 The majestic hills in the distance and the warm golden sunlight infuse the scene with a sense of classical grandeur that contrasts sharply with the flat landscape and Dutch climate. The paintings from this period add a new dimension to Cuyp’s idealized visions of life in the countryside, a vision of a Dutch arcadia in which man coexists in perfect harmony with animals and nature.8 AR
The imagery of Cuyp’s stable interior closely
echoes the title plates to series of prints of farm animals.¹ For example, Boëtius Bolswert’s print dated
1614 after a design by Abraham Bloemaert (fig. 1)
similarly depicts a farm woman with brass vessels, baskets laden with produce, cattle, and even the
farm cat—familiar elements in any barn.² The print
is a contrived allegory meant to introduce a series
of twenty etchings depicting farmhouses; inscribed
on the title plate is a Latin poem that celebrates
farm life:

Oh most happy is he, and truly blessed,
who may spend his years free from civic duties,
living safely under the roof of his shed!
His mind is not disturbed by various complications,
He does not struggle with whims,
But is happy with the work of his ancestors, and
contentedly
Harvests yellow grain or the ripe apples from the trees,
or herds productive cattle to his pastures.
When a diligent wife takes part of the work,
Oh most happy is he, and most highly blessed!³

These lines by G. Ryckius reiterate the sentiments
and even the language of Horace’s famed celebration
of the simplicity of rural life, the second epode
“Beatus ille.”⁴ The general thrust of the text is also
directly relevant to Cuyp’s painting. A title plate
very similar to Bloemaert’s was designed by Jacob
Cuyp for his series of prints depicting various
animals, etched by Reinier van Persyn. These prints
suggest that the stable was the center of farm life,a role emphasized by both ancient and seventeenth-
century agricultural poetry, especially that inspired
by Virgil’s Georgics. Cuyp too made this clear by
allowing a glimpse of the sunlit landscape through
the open stable door at the left. While the stable
housed cattle, a variety of farm equipment, and pro-
duce grown on the farm, it was also a preparatory
area for food and acted as an adjunct to the kitchen.

In Cuyp’s depiction, a woman scours a brass kettle
with some straw, while vegetables and game are
piled on a nearby bench.

Bloemaert’s image and Ryckius’ poem, like Cuyp’s
painting, clearly show that these farms were simple
but not poverty stricken. Dutch prints from the
early years of the century often depict farmhouses
as ramshackle ruins, a tradition also evident in
the paintings of barn interiors by Roelant Savery
(for example a circular painting dated 1615 in the
Rijksmuseum, Amsterdam). In addition, Nether-
landish artists had long favored depicting the
Nativity of Christ in ruined stables to indicate the
humility and virtuous poverty of the holy family.⁵
In nearby Rotterdam, several painters specialized
in simple stable interiors.⁶

However, Cuyp’s stable is evidently more
prosperous than any of these examples. The interior
is clean and well lit, the woman neatly dressed.
An analogy can be found in Peter Paul Rubens’
grand depictions of flourishing barns. Like Cuyp’s
painting, Rubens’ Prodigal Son (Koninklijk Museum
voor Schone Kunsten, Antwerp) and Winter Land-
scape (Royal Collection, London) suggest the
bounteous productivity of a farm. Cuyp’s depiction
of a stable interior contains many of the same
associations with prosperity and the happiness of
rural life found in the artist’s more celebrated paint-
ings of cattle. ⁷
After witnessing the stoning of Saint Stephen, the first Christian martyr, Saul had proceeded to Damascus to capture more Christians. But on the way, he was engulfed by heavenly light. A voice from above asked him, “Saul, Saul, why do you persecute me?” Saul, who became known as the apostle Paul after the conversion, was left blind for three days. Like most painters before him, Cuyp depicted the scene in a violent flash of light. Horses bolt in all directions as Saul lies on the ground, his turban tossed aside. One of Saul’s soldiers struggles to control his rearing horse as other men are thrown to the ground. At the right, a group trembles in awe at the heavenly voice.

This painting shows the influence of the artist’s uncle Benjamin Cuyp. Benjamin favored dramatic bursts of light and complex arrangements of figures. Benjamin painted at least five versions of the Conversion of Saul, as well as numerous battle scenes that share such similar motifs as fallen horsemen and fleeing soldiers.1 Aelbert’s arrangement of figures, which comes to an apex with the man on horseback silhouetted against a brilliant light, is closely derived from Benjamin’s versions (see Wheelock essay, fig. 11). But other aspects of the painting are Aelbert’s own: the light has a golden tonality, and careful attention is paid to the depiction of the costumes and horses. Lying on the ground dazed, Saul gestures as though he were listening intently to the words of Christ. The figure thus possesses a sense of calm amidst the surrounding tumult. This motif is not found in other Netherlandish depictions of the subject and may be Aelbert’s own invention, although it partially resembles Saul’s pose in a print by the German artist Johann Ladenspelder.2

Cuyp painted two versions each of the Baptism of the Eunuch (cats. 9, 30) and the Conversion of Saul (fig. 1). The two subjects provided rich and varied opportunities to paint horses and exotic costumes — motifs Cuyp favored. Moreover, theologians drew instructive comparisons between the two narratives. Saul and the eunuch underwent two very different types of conversion. The eunuch discovered Christ through careful study of scriptural text and was therefore baptized, whereas Saul was converted by Christ’s sudden, miraculous appearance. Erasmus, for example, contrasted the humbleness of the eunuch with the arrogance and persecutory zeal of Saul. Some commentators noted that both the eunuch and Saul were Jewish, but became Christian missionaries.3 In his widely read commentaries on the Bible, Calvin specifically compared Saul before his conversion to a violent animal, a “beast that was unbridled.”4 The violent confusion of the horses in Cuyp’s picture may recall this reading. Saul’s conversion also led Calvin to draw broad conclusions about intolerance.5

The Conversion of Saul had long been a popular theme throughout Europe, and although it was employed prominently in Counter-Reformation symbolism, especially in Jesuit iconography, the subject continued to be painted by Dutch Calvinist artists.6 Aelbert Cuyp’s other depiction of the subject (fig. 1) belonged to the Pompe van Meerdervoort family, important patrons of the artist (see cat. 29).7 This larger, probably later version is less a landscape and more a figural composition. The painting gives greater prominence to Saul (and his horse), who remains essentially the same except that he turns his hand away from his face in a gesture of comprehension. AC
The rolling countryside that Aelbert Cuyp discovered on his trip along the Rhine in the early 1640s provided him with a visual vocabulary that transformed the character of his art. Although the specifics of Cuyp’s trip are not known, one can envision the artist’s excitement when he first reached the summit of Grebbeberg, an overlook situated between Rhenen and Wageningen, and gazed in wonder at the full extent of the landscape unfolding before him. This panoramic view of the Rhine valley was unlike any he had experienced in the flat river landscape surrounding Dordrecht. Surmounting this height was an imposing stone marker, named Koningstafel (kings table), that also lent its name to the overlook. Koningstafel was named in honor of the Elector Palatine Frederick V, who reportedly enjoyed viewing the Rhine valley and surrounding countryside from this spot, much as do the two travelers in this luminous painting.¹

Koningstafel was a popular destination for travelers to the region. An eighteenth-century traveler’s pocket atlas specifically recommended visiting this "high mountain" near Rhenen, “which is frequently climbed to gaze at one of the finest views over the Rhine, as well as onto the Neder-Betuwe, and over the Rheensche Veenen."² Following the lead of other Dutch artists who had visited this area, among them Hercules Seghers (c. 1589/1590 – c. 1638) in the late 1620s and Jan van Goyen in 1640, Cuyp pulled out his sketchbook and made drawings of Rhenen and its surroundings (see cat. 73).³ Quite possibly, Cuyp, like the figure in this painting, may have laid his papers on the flat surface of the Koningstafel before beginning to draw.

One of the views of Rhenen Cuyp made from this site (Haverkamp-Begemann essay, fig. 3) served as the model for the landscape in three of his paintings, among them View of Rhenen with Travelers (fig. 1), c. 1645, a work that includes a figural group resting at the Koningstafel that is comparable to the one in Two Horsemen on a Ridge. A now-lost drawing probably was the basis for the panoramic landscape stretching out in this small panel painting.⁴ The view, which is toward the south, depicts the peacefully flowing Rhine with its low-lying surrounding floodplain. Beyond the river’s bank can be seen the church steeple from the small village of Ter Lee.⁵

Because this small painted panel exhibits the forceful, vigorous brushwork found in Cuyp’s works from the mid-to-late 1640s, he appears to have executed it somewhat after he executed his View of Rhenen with Travelers. The energetic handling of the sky particularly resembles that in River Landscape with Cows (cat. 19). This later dating is also supported by subtle differences in the men’s costumes — the shapes of their hats, jackets, and boots all reflect the fashion of the mid-to-late 1640s. AKW
The Maas at Dordrecht in a Storm

The Maas at Dordrecht in a Storm

- In contrast to Cuyp’s numerous shipping scenes in which he presented majestic ships in the calm waters of the rivers surrounding Dordrecht, here the artist confronts the viewer with a dramatic scene of a sailing vessel caught in a storm on the river Merwede. Against the backdrop of Dordrecht as seen from the southwest — the view has been taken from the Meerdervoort dike — a smalschip is sailing close-hauled across the choppy river. The sky is filled with thick dark clouds, and in the distance a jagged line of lightning momentarily casts light on the city’s roofs. The light coming from the left, where the sky appears to be clearing, illuminates the taut sail of the boat, its backwash, and the whitecaps on the water.

Cuyp’s shipping pictures often portray life on and around Dordrecht’s rivers, ranging from mundane subjects such as people working on the riverbanks (cat. 4), fishing (cat. 7), or transporting goods and passengers to more majestic views of the river (cats. 35, 36) and grand celebrations of the gathering of the Dutch fleet (cat. 28). With its vigorous and sketchy brushwork, the present picture conveys a sense of precariousness and drama that is quite unusual within Cuyp’s oeuvre. The threat of being struck by lightning literally hangs over the ship’s mast. The same boat sailing in a stiff breeze, though in a less dramatic storm and more closely seen, appears in a work by Cuyp in the Wallace Collection, London (fig. 1).²

Aside from Cuyp’s direct observation of the world around Dordrecht, this painting may well have been inspired by works by Jan van Goyen. In the 1630s and 1640s the latter painted a number of views of Dordrecht whose compositions, in both quiet and stormy waters, are similar to the present picture (fig. 2).³ Aside from Van Goyen, the subject of a relatively small vessel sailing in a strong breeze with a close-hauled sail, at times brightly lit and set off against the dark unruly water, appealed to many painters. Jan Porcellis (1584–1632), Abraham van Beyeren (1620/1621–1690), and later Jacob van Ruisdael (1628/1629–1682) and Willem van de Velde the Younger (1633–1707) also show boats in similar predicaments.⁴ Indeed, Van Goyen’s depictions of storms of the 1640s bear striking similarities to Cuyp’s interpretation of the subject.⁵

The depiction of thunderstorms, an ephemeral and essentially “unpaintable” phenomena, occupied an important place in the art theoretical discussions of the sixteenth and seventeenth centuries. Among the publications in which this issue is raised are Karel van Mander’s Den grondt der edel vry schilderconst (1604), which challenges young painters to emulate Apelles in his reputed skill in painting thunder and lightning, and Philips Angel’s Lof der schilder-konst (1642), which emphasizes the illusionistic capacities of painting. Many of the ephemeral atmospheric qualities (“rain, thunder, lightning, clouds, vapour, light, reflections”) stressed by these authors are convincingly portrayed in this small view of Dordrecht.⁶

The Maas at Dordrecht in a Storm
River Landscape with Cows

1648–1650, oil on panel, 68 × 90.2 (26 ¼ × 35 ½). National Gallery of Art, Washington, Gift of Family Petschek (Aussig)

- Cuyp was not the first Dutch artist to focus on a herd of cows for his subject matter, but in his hands the theme took on a grandeur and dignity lacking in the work of his predecessors. Whether in the hilly, dense forest landscapes of Roelandt Savery (see Wheelock essay, fig. 18) or the flatter fields of scenes by Cornelis Saftleven, cows were portrayed as inelegant, graceless animals that mill together in rather haphazard formations. Cuyp, however, seems to have perceived a certain nobility in the beast, one he emphasized by placing the viewer at a low vantage point and by silhouetting the cattle against a light-filled background. He simplified and purified their forms to give their heads sharp, angular shapes. He emphasized these ennobled profiles by orienting his herd on a horizontal axis along which their overlapping forms become visually connected. Finally, he projected their heads forward, even those lying in the grass, in a way that suggests a degree of alertness and even intelligence not normally associated with this species.

This painting is one of a number of similar images that Cuyp painted in the late 1640s and early 1650s, when he was beginning to incorporate stylistic elements from Simon de Vlieger and the Dutch Italianate artists. While the painting’s dramatic cloud formations, broken by shafts of light, reflect the impact of De Vlieger’s paintings of the mid-1640s (see Wheelock essay, fig. 4), the impact of the Italianate artists is evident in Cuyp’s placement of large foreground forms (cattle) within a more generalized, arcadian landscape. The mood is idyllic. As the herd of eight cows quietly enjoys the gentle winds of a late afternoon summer day, a few sailboats glide along the inland waterway, their reflections shimmering in the peaceful water. On the crest of the gentle rise to the right, two herdsmen converse with a rider mounted on a large brown horse. Shafts of light breaking through the billowing clouds not only accentuate their diminutive forms, but also seem to provide a spiritual blessing upon their presence. The overriding sense is that this is a blessed land, fertile, prosperous, and at peace.

As with some of his other paintings, Cuyp may well have used drawings made from life when composing this work. His drawing of a horse in the Abrams collection (cat. 99) was probably the source for the image of the horse seen from behind on the crest of the hill. Although a number of Cuyp’s studies of cows resemble cows in this painting, no known drawing served as a direct prototype for any of them. AEW
A Herdsman with Five Cows by a River represents one of the most characteristic types of pictures painted by Aelbert Cuyp. A herd of cows stands in the shallow water of the banks of a river (possibly in the vicinity of Dordrecht), grazing, drinking, and enjoying the warm, golden afternoon sun that floods the scene. Their shepherd crouches by the water on the far right, and on the left two fishermen go about their business in their small rowboat. The animals are placed close to the foreground, partly silhouetted against the bright sky and partly against the rising land on the right. The vast expanse of the river, dotted with a few sailing boats, extends from the immediate foreground toward a thin strip of landscape along the horizon. The contrast between the closely seen cattle in the foreground and the distant view is underscored by Cuyp’s use of color. The boat with the fishermen, the cattle, and the land range in tone from a light, warm brown to dark browns, greens, and black, while the view across the river is suffused with the pale, hazy light streaming in from the left. The swirling clouds are painted in thick, vigorous brushstrokes in shades of blue, gray, and light yellow.

The present painting belongs to a group of cattle pictures with very similar compositions. They are the first “pure cattle paintings” by Cuyp. The other works are two pendant paintings in a private collection in London (cats. 22, 23), another pair of pendants from another private collection (cats. 22, 23, figs. 1, 2), Cattle in a River, now in Budapest (cat. 21), and a painting in the collection of Lord Samuel, England. There seems to be little disagreement on the dating of these paintings. While MacLaren had suggested a date of the mid-1650s for the National Gallery painting, more recent authors seem to agree on a date of circa 1650.

The present painting may well represent the first work in the series, since Cuyp included a number of details (such as the boat with the fishermen and the land) that somewhat detract from the impact of the group of cattle. By contrast, the painting from Budapest (cat. 21) dispenses with these additional details and focuses on the group of cattle instead. In that work the animals are closer to the foreground than in A Herdsman with Five Cows by a River, which enhances their majestic appearance. Nonetheless, the present picture must have served as a model for the subsequent interpretations of the theme, for Cuyp repeated the arrangements of cows (for instance, in cat. 22).

Indeed, the depiction of the cattle in these paintings lends them a new degree of idealized grace and nobility not found in any of the cattle pictures of Cuyp’s predecessors and contemporaries, such as Abraham Bloemaert, Roelandt Savery, and, later, Jan Asselijn and Karel Dujardin. Equally, Paulus Potter’s works of the same period depict cattle in a far less idealized manner, as common, rough, and imperfect farm animals—a far cry from Cuyp’s beautiful and monumental bulls and cows.

Whether these portrayals of cattle carry any symbolic overtones is a matter of debate. The traditional role of cows as part of representations of Terra does not seem applicable in the case of animals wading in shallow water, especially in the later versions of this series. However, cows have also traditionally been associated with earth, fecundity, prosperity, and spring. In the Netherlands of the seventeenth century, where dairy farming played an important role in the country’s economy, the cow was seen as a symbol of national pride that connects general concepts of spring and fertility with the economic success and productivity of the Dutch nation. Cuyp’s idealized depictions of cattle clearly resonate with these overtones without ever being specifically symbolic or overtly moralizing.
Cows in a River

- Water, sky, and cattle: these are the simple elements that constitute a remarkable group of paintings Aelbert Cuyp painted around 1650. The sight of cattle wading in shallow water was very common in spring when the wide banks of Dutch streams would flood. Cuyp must have found the composition especially rich and satisfying because he completed so many different versions with such subtle variations. The extremely low horizon and mirrored surface of the water eliminate distracting details. The herd of cattle forms a unified shape terminated by the sharp angle of one animal drinking from the water. The shimmering reflections of the legs seem to give the cattle even greater substance. This almost abstract foundation leaves most of the picture’s surface for the sky—a dramatic swirl of energetically brushed gray clouds. The wood support of these pictures allowed the artist to display the rich textures of his brushwork. Pentimenti above the herd not only show that Cuyp worked to refine the composition, but also indicate that it is earlier than the other version (cat. 22), which is nearer and more geometric. This simplicity may also be explained by its role as a pendant to another painting of cattle (cat. 23), while the painting in Budapest appears to have been conceived as a stand-alone work. This exhibition affords the first opportunity to compare this beautifully preserved painting with its near mirror image.

Cattle had long been associated with a set of meanings and associations tied to prosperity and well-being. Traditionally a symbol of agricultural bounty, the cow became specifically associated in about 1600 with the peaceful affluence of the Dutch nation. The town of Dordrecht was especially proud of its cattle farming because, after the catastrophic flooding of the region in 1421, numerous polders had been reclaimed for agricultural use. Many of Cuyp’s patrons helped finance drainage projects and owned land in the new agricultural polders, and Dordrecht collectors may possibly have associated cattle pictures with the renewed agricultural industry of the region—a meaning also connected with the cow’s symbolic identification as Terra. Indeed, Cuyp’s depictions of cattle always seem to be set along the waterways near Dordrecht. In the so-called “Large Dort” (The National Gallery, London) cattle and a milkmaid are set before an idealized representation of the city itself, strengthening the connection between Dordrecht and the theme of agricultural bounty. Printed views often contain similar combinations of cattle with a panorama of Dordrecht.

Nearly perfect blocks of color, the cattle depicted by Cuyp here (and in cats. 22, 23) are idealized animals. They are certainly very different from the spotty, shaggy beasts that the artist depicted in his early paintings (cats. 2, 4, 5, 10), but are closer to the beautiful specimens painted by Italianate artists such as Claes Berchem and Karel Dujardin. The little information we have about dairy farming in the Dordrecht region during the seventeenth century indicates that most cattle were reddish, some 30 percent were black, while only 4 percent were spotted. Obviously, Cuyp could easily manipulate the color of his cattle to achieve picturesque effect.

Cuyp’s attention to the uniformity and coloristic beauty of cattle accords well with Karel van Mander’s instructions to the artist interested in depicting cattle:

Then go to try to practice
You must also further study the colors
Of oxen and cows, red, gray, and pale
How wonderfully spotted they are, all
Having ears always like all the others
One not having a hair that’s differently spotted
from another.

Van Mander could almost be describing Cuyp’s painting when he stresses the regularity of cattle, their variety in color, and how they look in groups.
Cows in a River
While cattle, sheep, and other farm animals appear even in Cuyp's earliest pictures, the artist only began to concentrate on cattle in about 1650, when he made a number of cattle paintings with different landscape settings. In these two paintings, Cuyp depicted the animals as nearly uniform blocks of color — forms to be arranged and lit as though components of a still life. Cuyp applied layers of paint quickly and forcefully. Much of the picture — the distant bank, the boats, and the edges of the clouds — was brushed wet in wet.

Cuyp's initial attempt to depict cattle wading in water appears to be a painting at Petworth, where the motif can be glimpsed in the distance. A work in the National Gallery, London (cat. 20), established the basic motif, but the view is wider than in the exhibited painting, while the rowboat and the man squatting at the right distract from the principal subject. Cuyp probably next painted the work in Budapest (cat. 21), and then, in another picture, reversed the herd of cattle, turning the drinking cow to face the viewer (fig. 1). This painting has a pendant depicting cattle with a horse and a shepherd boy (fig. 2). The exhibited pair of pictures seems to be the culmination of this process. While the composition of the cows in the water remains essentially the same as in Cattle in a River (fig. 1), a new pendant has been devised showing bulls on a riverbank. Pendant paintings of cattle are rare in seventeenth-century Holland, and prominent cattle specialists such as Paulus Potter and Karel Dujardin do not seem to have conceived their depictions of animals in pairs. However, in 1616, Roelant Savery had painted pendants showing cows and bulls, purposefully contrasting docile cows with belligerent bulls fending off a fox. Cuyp had turned periodically to Savery for inspiration (see cat. 1), and was very likely once again influenced by the older artist. In Cuyp's pendants, the traditional significance of bulls as protectors is missing, since Cuyp's bulls do not seem especially defensive or aggressive.

The paintings have been in the same collection since 1829 and in the nineteenth century were widely praised as prime examples of Cuyp's art. In 1877 a reviewer for the Athenaeum wrote, "in no instance is the art of Cuyp more enjoyable than in the pair of small works... extremely fine and simple compositions — an atmosphere of apparently illimitable loftiness, pregnant with the pure, warm, and silvery vapours of a fine evening." The writer thought the painting of cattle on the bank was rendered in the contrasting light of early morning. Only Gibson in 1928 found the paintings "unusually rough and thick for Cuyp, and for once his sense of form has relatively failed him."
Bulls on a Riverbank
Muleteers make their way onto a ridge in a hilly landscape. Led by a young man in improbably pristine clothing, a donkey carries a woman as another mule laden with bundles and a shiny brass jug follows. Behind them, another man encourages a recalcitrant animal up the hill. The scene is disarmingly simple. Little disturbs the sweeping lines of the countryside, an effect enhanced by the long evening shadows. Shaded from the sun, the cool green and brown foreground sets off brilliantly lit hills in back. The intense sunlight refracts the farmhouses and the buildings on the hill, turning them into crystalline forms. The edges of the clouds above are delicately tinged with color. So convincing is this evocation of the atmosphere and light of Italy that it is difficult to believe that Aelbert Cuyp never saw the country for himself. Did he simply master the artistic tricks he saw in the pictures of Jan Both, Claes Berchem, and Cornelis van Poelenburgh? In particular, Van Poelenburgh’s renderings of distant ridges and hill towns seem to have been the model for this landscape. Cuyp probably made this painting, his most believable depiction of Italian scenery, just before his 1652 journey along the Rhine, for after that date he almost always included motifs derived from his travel sketches.

Aelbert Cuyp is perhaps the most prominent Dutch Italianate landscapist not to have gone to Italy, although no conclusive evidence yet proves that Claes Berchem or Adam Pynacker actually traveled there either. While modern art historians have coined the terms “Italianate” and “Italianizing” to categorize Dutch views of Italy, how did seventeenth-century viewers appreciate such pictures? Only a handful of landscapes were described as Italian in inventories from the end of the seventeenth century and beginning of the eighteenth: these include works by Jan Asselijn, Claes Berchem, Adam Pynacker, Abraham Storck, Jan Baptist Weenix, and Thomas Wijck. In 1718, Arnold Houbraken characterized the landscapes of Jan Asselijn and Karel Dujardin as painted in a “zuivere en heldere wyze” (pure and bright manner). More important are a few references that characterize landscapes as made in an Italian manner, as opposed to simply Italian in subject. A 1672 inventory drawn up in Dordrecht describes two works as a “lantschap, op zijn Italiaans” (landscape, in an Italian manner).

In 1689, a London auction catalogue employed an analogous term in listing a painting as “An Original Landscape the Italian way.” These are sure indications that the Italianate landscape style practiced by Dutch painters was becoming recognized by a wider public.

The group of riders in this painting inevitably recalls the holy family, perhaps journeying to Bethlehem or fleeing into Egypt. Painters such as Jan Both, Claes Berchem, and Karel Dujardin frequently included such figures in their works, which, while they lack specific attributes or symbols, are strong reminiscences of a biblical story. Apparently, the Italianate style permitted a deliberately ambiguous treatment of figure types that allowed viewers to construct their own narratives.

c. 1650–1652, oil on panel, 48 × 82.5 (18 ¾ × 32 ½). The Corcoran Gallery of Art, Washington, William A. Clark Collection

Dordrecht was situated near the confluence of a number of major waterways—the Maas, the Merwede, the Waal, and the Rhine—rivers that allowed easy access by boat to the eastern regions of the Netherlands. Cities lying on these waterways—Arnhem, Nijmegen, Rhenen, and Wageningen—were some of the oldest and historically most important of the region, and Aelbert Cuyp, following Van Goyen’s lead, recorded their appearance in landscape drawings executed during his journeys to that region (see cats. 73–76), where he discovered panoramic views of broad river valleys dotted with towns, churches, and windmills, views whose impressions he captured with expressive chalk drawings in horizontally shaped sketchbooks (see Havenkamp-Begemann essay). Partial views of these areas must have found a ready market, for Cuyp translated his drawings of the early-to-mid 1640s into impressive panoramic paintings that stressed the hilly terrain and dramatic sites of cities near the eastern frontier of the Dutch Republic. Once he returned to Dordrecht, the visual vocabulary provided by these landscape studies allowed him to develop his ideals of the Dutch arcadia in paintings he executed throughout the rest of his career.

This beautifully preserved, luminous work from the Corcoran Gallery of Art is one of the earliest instances in which Cuyp incorporated references to this distant landscape. The background of this work depicts a view of the Rhine river valley virtually identical to that found in a panoramic drawing he made near Cleves, just over the Dutch border (cat. 76). The most prominent feature of this landscape is Monterberg, the distant hill barely visible through the gentle haze of the river valley. In his later paintings (see cat. 38), Cuyp took more liberties with the topographic character of the landscape than he did here, not only exaggerating the height of Monterberg but also expanding the breadth of the river valley.

The cattle resting on the foreground, some of which are derived from existing drawings (see cat. 103), enframe the landscape with quiet dignity, a sense Cuyp reinforced through the weight and repetition of their forms. In these respects, as well as in their general disposition, they resemble the cattle Cuyp depicted in River Landscape with Cows (cat. 19). Cuyp may even have adapted some of the same preliminary drawings for cows for both works, as he did with Two Studies of a Horse (cat. 99), in which one of the studies coincides with a horse in River Landscape with Cows and one with a horse in Landscape with Herdsmen. Indeed, the two paintings also share the theme of horsemen stopping to ask local herdsmen for directions.

Such repetitions of motifs may account for the reservations some scholars have quietly expressed about the painting’s attribution. Nevertheless, Cuyp generally worked in this manner, readapting drawn studies to create a surprising range of compositions with a rather limited range of subject matter. Although his River Landscape with Cows and Landscape with Herdsmen both portray a realm where man, animal, and nature coexist in peaceful harmony, the impact of the two works is strikingly different. The emphasis of the earlier work is on the drama of the sky, where shafts of light break through billowing clouds. In the latter work, Cuyp emphasized the quiet stillness of the air, which has been warmed by the sun—an effect he reinforced by silhouetting the cattle prominently against the golden sky and the muted tones of the distant river valley. - Portraiture occupies a curious position in Aelbert Cuyp’s oeuvre. Although Aelbert began his career in a workshop that was known for portraiture (see Wheelock essay, figs. 9, 10), his father was the portrait specialist. Aelbert painted landscapes in Jacob’s pastoral portraits until at least 1645, long after he had begun working as an independent landscape artist, but he does not appear to have assisted with the portraits themselves. No portraits by the artist are known until 1646, the year in which he executed the pendant portrait drawings now in Berlin (cats. 108, 109). During the late 1640s and early 1650s, he painted relatively few half-length portraits, probably because he gravitated more easily to landscape images. In these works Cuyp focused, as did his father, upon the sister’s physical rather than emotional character. Indeed, it is fair to say that most of the painted portraits Aelbert created during the early part of his career are relatively uninspired, for his figures lack animated gestures or expressions that would compensate for the absence of psychological penetration.

Given this background, the expressive, forceful character of these half-length oval portraits of 1651 comes as a surprise, and one wonders if new stylistic influences expanded the range of Cuyp’s portraits at this time. In 1651 Jacob was at the end of his life, and the traditional style of portraiture coming from the workshop may have been seen as decidedly outmoded. The paintings have a dramatic flair vaguely reminiscent of works painted by Rembrandt and his school, particularly ones executed by Paulus Leysine and Ferdinand Bol. Both of these artists were from Dordrecht and had studied with Jacob Gerritsz Cuyp before adapting Rembrandt’s manner of painting. Although Bol had moved to Amsterdam in the mid-1630s and Leysine had moved to The Hague in the 1640s, Cuyp must have known their portraits, including their pastoral portraits, in which sitters are similarly modeled in strong light and dressed in exotic costumes.

Cuyp’s sitters are richly garbed in fanciful costumes associated with the hunt. The young woman, who wears two white feathers in her hair and a gold-trimmed, split-sleeve dress, rests a spear against her shoulder and holds the fruits of her hunt: small birds suspended from a split willow branch. Her male counterpart, who wears a split-sleeve doublet and a hat festooned with two white ostrich feathers, proudly holds the barrel of a rifle in his left hand. The similarities in costume and attribute, as well as the identical size and shape of the panels, confirm that Cuyp intended these portraits to be pendants.

The pastoral poems of Pieter Cornelisz Hooft (1581–1647), Giovanni Battista Guarini (1538–1612), and Jan Hermansz Krul (1602–1646) recount the joys and laments of Arcadian lovers with names such as Granida and Dafilo, Silvia and Dorinda or Cornelia, or Laura and Tyrer. Widespread interest in these romantic stories, which stress the purity and innocence of country life, helped spawn the blossoming of pastoral portraiture in the Netherlands during the second quarter of the seventeenth century, primarily in Utrecht, but also in The Hague, Amsterdam, and Dordrecht. While Cuyp’s portraits belong to this broad tradition, his sitters have not posed as Arcadian shepherds or shepherdesses, but as hunters. The distinction may relate to class consciousness, for hunting was a privilege reserved only for aristocrats.

Seventeenth-century emblematic literature and pastoral poems also often associated the hunt with love. This thematic association would be particularly appropriate should the portraits have been commissioned to commemorate an engagement or marriage, a distinct probability given the ages of the sitters. For example, Otto van Veen referred to the hunt as a prelude to love (“The chasing goeth before the taking”) in Amoruni emblemata.6 Crispin van de Passe similarly noted how the pleasures of love often replace the joy of the hunt: “Sometimes I was a Sheperdesse/within the Tuscan plaine/But when unto dame Venus I did render up my name,/I lost my shepheards crooke, and then/betooke me to this game.”

Portrait of a Woman Aged Twenty-One, as a Hunter
The Maas at Dordrecht

- In the mid-1830s, Gustav Waagen, director of the Royal Gallery at Berlin, made an extensive tour of British private collections and, in 1838, published an account of the works of art he had seen. When he expanded upon his account in his Treasures of Great Britain (published in four volumes from 1854 to 1857), he wrote enthusiastically of Aelbert Cuyp’s The Maas at Dordrecht in the collection of Sir Abraham Hume:

The chief picture, however, of the whole collection is a view of the Maas, with the town of Dort, and numerous ships, by this master, in a moderately warm but extremely clear evening light. The delicacy of aerial gradation in a series of vessels seen one behind the other is not to be described, and, at the same time, all is executed with the greatest ease and freedom. This picture, 3 ft. 10 in. high, by 5 ft. 6 ½ in. wide, is a proof not only of the extraordinary talent of this master, but also of the astonishing height which the art of painting in general had attained in Holland in the seventeenth century.

Waagen’s enthusiastic response to The Maas at Dordrecht has been widely shared, and the painting has been featured in a number of exhibitions of Dutch painting since it was first brought to England in 1804. The appeal, as Waagen suggested, owes much to the extraordinary light effects that Cuyp achieved, for rays of the early morning sun stream across the landscape, striking at full force the tower of the great church of Dordrecht and the sails of the ships. Much of the painting’s appeal is also owed to the massive scale of the work, which gives the scene a dominating presence, one enhanced by the sweep of the clouds and the powerfully conceived composition.

Cuyp portrayed Dordrecht and the river Maas as it is seen from the north, across the river Medway. From this vantage stretches an impressive panorama of the city, a view accented by the distinctive port building, the Groothoofdspoort, and the Grote Kerk, with its massive yet unfinished tower. As with his depictions of Dordrecht at Ascott (cat. 35) and Kenwood (cat. 36), Cuyp based this view on a drawing of the site from the mid-1640s (cat. 84). Not only are the three paintings topographically similar, but they all include two sailboats to the right of the Groothoofdspoort that appear in the drawing.

The Washington painting differs from those in Ascott and Kenwood in the drama and activity of a great number of ships assembled near Dordrecht, each crowded to capacity with passengers. In the midst of these transport boats are a few yachts, including one firing a salute. Cuyp has apparently portrayed an uncommon event taking place on the river Maas, for which a number of distinguished officials are being ferried to a large sailing ship (right foreground). As an officer wearing an orange sash and feathered hat awaits them and a drummer beats on his instrument, the boat carrying two gentlemen reaches its destination. A bugler in the second rowboat announces the imminent arrival of the other dignitaries.

When the painting was in the Van Slingeland collection in the eighteenth century, the subject was identified as a rendezvous of Prince Mauritius (1567–1625) with several other princes of the city of Dordrecht. However, neither the style of the costume nor the physiognomy of the officer standing in the sailing ship (pleyt) resembles Mauritius. Another fanciful interpretation, first proposed in 1929, was that the scene “represented Charles II in the Dordrecht roads, May 26th, 1660, during his journey from Breda . . . to The Hague and thence to England.” Several objections weigh against this theory: not only are English flags or other signs of English royalty absent but stylistic considerations also make it probable that Cuyp executed this scene in the early 1650s. In the 1660s Cuyp painted with less emphasis on the weight, density, and textures of materials than is evident here in the hull and sail of the pleyt, whose effects he achieved through the application of thick impastos. Finally, the style of the figures’ costumes is comparable to clothes worn in the late 1640s and early 1650s.

As Margaret Russell has persuasively proposed, the probable subject matter of Cuyp’s painting is the great assembling of the Dutch fleet at Dordrecht in July 1646. Matthijs Balen, who extensively described this event in his chronicle of the city’s history, wrote that for two weeks an enormous transport fleet, consisting of more ships than had ever before come together at Dordrecht and over 30,000 foot soldiers, had gathered at Dordrecht. The city magistrates ordered that free board and
lodging should be provided for the men. Everything the soldiers needed for the festive occasion was provided: beer as well as bacon, bread as well as cakes. Onlookers from Haarlem, Delft, Amsterdam, Rotterdam, The Hague, and elsewhere crowded into the city.

Balen precisely described the ships and their locations as they anchored in the tidal current of the Merwede. As is clear from his account, the “fleet” was a disparate group of ships, consisting of not only warships but also utilitarian and transport boats. Among them were the kitchen boats, which were also used as sleeping accommodations for the personnel of the princely household; sailing vessels called uytlegers, which were used for guard and pilot duties when approaching internal waterways; and pleyten, single-masted, wide-bodied ships used as ferry boats. On 12 July, the fleet set sail as a last show of force against the Southern Netherlands at the onset of negotiations for the truce (which would ultimately be signed at Münster in 1648). However, nothing ever came of the expedition, thus this event of such significance in the history of Dordrecht was of no consequence in the broader course of Dutch political history.

Balen’s description of the locations of the ships carrying the various regiments can be applied to the situation depicted in Cuyp’s painting. In the foreground left a warship flying the Dutch tricolored flag seems under sail in midstream. The large massing of ships beyond it may be those containing the Frisian and English troops that Balen described as being anchored near the Groothoofdspoor. Beyond these ships, to the right of the Grote Kerk, a large yacht fires a gun salute. This ship, which displays the Orange coat of arms, must be that of the life-guards (Lijf-Sol-l-Bende) of Prince Frederik Hendrik that Balen indicated was anchored near the Blauropoord.

The focal point of Cuyp’s composition is not an elaborate warship but the relatively simple pleyt in the right foreground. The ship is at anchor, with her bow in an easterly direction, not to the wind, but with the tidal current to the bow. The large, wide jib is lowered and the spritsail is in a half-lowered position. In all likelihood the officials who are approaching the pleyt are coming to bid farewell just before the fleet’s departure. With the exception of the pleyt, all the ships have their sails fully raised. They would have waited for the ebb tide to help carry them along the inland waterways to Bergen op Zoom and Sas van Ghent.

The identity of the portly officer standing on the pleyt is unknown. However, the officials in the rowboats are probably representatives of Dordrecht, since the young, standing officer wears a sash of red

1 Aelbert Cuyp, A Landing Party on the Maas at Dordrecht, c. 1650. Waddesdon The Rothschild Collection (The National Trust)
and white, the city’s colors. Indeed, this dignitary, who is given such prominence through his central placement, may have commissioned this large, complex painting. It is possible that he was Matthijs Pompe van Slingeland, who in 1646 at the age of twenty-five already held the public office of schepen (judge, alderman). Not only was Matthijs Pompe married to one of the daughters of Dordrecht’s burgomaster, Cornelis de Beveren, he was also the brother of Michiel Pompe van Meerdervoort, one of Cuyp’s important patrons (see cat. 29). Given his official position and family connections, Matthijs Pompe could have been granted the honor of presenting the burgomaster and other high-ranking city officials to an officer of the fleet at the moment it was about to set sail. Whether he was an ancestor of Johan van der Linden van Slingeland, the eighteenth-century Dordrecht collector who is the first documented owner of this work, is not known.

When the Washington painting belonged to the Van Slingeland collection, it had a pendant, a painting that now hangs in Waddesdon Manor (fig. 1). The two works, which are virtually identical in size, together depict a continuous panoramic sweep of this impressive assemblage of ships anchored off of Dordrecht in 1646. In the pendant, a comparable scene unfolds, with distinguished individuals being transported to an awaiting sailing ship. Reiss proposed that the rowboat contains Prince Frederik Hendrik inspecting the Dutch fleet, an uncertain but plausible identification. Frederik Hendrik was present at the Groote Vergaderinge in Dordrecht since Balen mentioned that his lifeguard was there. It seems, however, that the prince accompanied the troops by land rather than by water, at least as far as Breda.

Cuyp’s masterful depictions of the Groote Vergaderinge of 1646 in Dordrecht stem from his long-abiding interest in depicting scenes along the Maas and Merwede. For example, in A View of the Maas at Dordrecht, c. 1644 (see Wheelock essay, fig. 2), he similarly depicted a panoramic, light-filled river view that focuses on a sailing boat with its jib lowered. Nevertheless, Cuyp’s Maas at Dordrecht is directly related to the marine “parade” pictures created in the late 1640s by Simon de Vlieger, specifically his imposing yet atmospheric image of this very event, which he executed in 1649 (fig. 2). Although De Vlieger provided Cuyp with the visual vocabulary necessary to create such a compositionally complex and yet balanced image, Cuyp gave his scene an immediacy and physical tangibility matched only by the later marine paintings of Willem van de Velde the Younger (1633–1707).
Michiel and Cornelis Pompe van Meerdervoort with Their Tutor

c. 1652–1653, oil on canvas, 109.8 × 156.2 (43 ¾ × 61 ½). The Metropolitan Museum of Art, New York, The Friedsam Collection, Bequest of Michael Friedsam

- In an expansive landscape, a party prepares to hunt. Two boys, Michiel Pompe van Meerdervoort (1638–1653) and his younger brother Cornelis (1639–1680), sit astride diminutive horses. Just behind them is their tutor, identified in an inventory of 1680 as a man named Caulier, who gives instructions to Willem, their coachman (see Chong’s essay). He holds two greyhounds, animals capable of running down game; in the center of the picture are two mastiffs, more powerful animals used for the kill. In the background, similar hounds pursue a small animal. The boys, costumed in lush velvet jackets of exotic provenance, are being taught equestrian skills by taking part in a hunt, a pursuit traditionally reserved for the aristocracy. A tower and some partly ruined fortifications just behind the riders suggest that this castle belongs to the Pompe van Meerdervoort family and that the landscape we survey is part of their estate. However, since the same structure recurs in Lady and Gentleman on Horseback (cat. 40), much of this image is fictional.

This painting is well documented: Inventories identify the principal figures with certainty. The death of the older boy in 1653 establishes a date for the work; this is confirmed by the view of Elten in the distance, which Cuyp sketched in 1652.1 Cuyp traveled up the Rhine as far as Nijmegen and Cleves, and filled sketchbooks with topographic drawings in black chalk — a rich source of motifs that directly or indirectly affected all of his late landscapes.2 The artist employed the same view in a more personal landscape showing two horsemen stopped near the vast panorama (fig. 1). One of the men sits to draw the view, clearly a depiction of Cuyp himself on his sketching expedition.

The portrait of the Pompe van Meerdervoort boys brings together several factors that had preoccupied Cuyp. It is the first in a line of apparently popular equestrian portraits crafted for members of a social class that would provide much of his future patronage. The painting also blends the artist’s firsthand experience of the expansive scenery around Elten with his study of the golden light and Italian motifs found in the landscapes of Jan Both. This combination became the essence of Cuyp’s landscape production for the rest of his career.

Netherlandish hunting portraits often have an informality and anecdotal atmosphere that distinguishes them from state equestrian portraits. Paulus van Somer, Daniel Mijtens, and Anthony van Dyck crafted hunting portraits for the English court that may have provided inspiration for Cuyp. His depiction of two young seigneurs being taught the arts of riding and hunting by a tutor specifically recalls prints by Crispijn van de Passe showing Antoine de Pluvinel giving riding lessons to Louis xiii (see cat. 39, fig. 1).3 Cuyp could easily have encountered Pluvinel’s popular illustrated treatise, since it was reprinted in Utrecht in 1625. An illustration by Abraham van Diepenbeeck for a similar equestrian manual of 1658 also shows two young princes being taught to ride.4 These images by Netherlandish artists leave little doubt that horsemanship and the equestrian hunt were essential components of noble life.

Although the educational allusions of the portrait are quite clear, they differ from the moralizing elements frequently discerned in seventeenth-century Dutch portraits of children.5 These young aristocrats are being readied for a sophisticated and cultured life in the manner recommended by Baldassare Castiglione in Il libro del cortegiano of 1528, which specifically required princes and courtiers to be taught the equestrian arts. Nicolas Faret’s paraphrase of Castiglione was revised by the Dordrecht artist and writer Samuel van Hoogstraten in 1657, and a Dutch translation of the Courtier was published in Dordrecht in 1662.6 Aelbert Cuyp’s equestrian portrait belonged equally to this social milieu in Dordrecht that aspired to proper aristocratic behavior. AC
The Baptism of the Eunuch

In a lush landscape, a sumptuous open carriage draped with velvet and golden fabrics, and sheltered by a blue silk umbrella, has stopped near a small pool. The Ethiopian eunuch, treasurer to Queen Candace, has alighted and kneels at the edge of the water, where the apostle Philip baptizes him.

The manner of painting in the foliage and the form of the signature suggest that this painting dates shortly after the equestrian portrait in the Metropolitan Museum of Art, made about 1653 (cat. 29). As Cuyp developed a new Italianate landscape style that found favor with patrons in Dordrecht, he returned to the historical subjects that had interested him at the very beginning of his career. In the decade between his first treatment of the subject (cat. 9) and this painting, Cuyp discovered the Italianate landscape style of Claes Berchem and Jan Both. Cuyp retained several elements from his earlier essay, particularly the general point of view, which brings the eunuch and Philip to the immediate foreground and isolates the carriage and the eunuch’s retinue on the road above — a scheme first developed by Rembrandt in 1630. In Cuyp’s second version, the eunuch’s retinue has grown considerably in size and opulence. Two beautifully attired outriders now accompany the official, and two impressive white steeds draw the elaborate chariot. The entire party is sheltered by cool trees, in marked contrast to the hot sun of the open countryside in the distance. The effect is strengthened by streaks of impasto above the umbrella that depict intense rays of sunlight penetrating the leafy shade. The trees also shade the calm pool, which reflects the figures and draws them close to the viewer. Above, a leafy branch frames the figurative group. As in so many of his mature landscapes, these equestrians journey through an exotic land — whether Italy, the Near East, or some unspecified, idealized locale. Then too, Cuyp had acquired a new technique and palette that allowed him to render more convincingly the luxurious textures of fabric and the brilliance of light.

The Baptism of the Eunuch was only occasionally painted by Dutch artists in the seventeenth century. Rembrandt and his teacher Pieter Lastman favored the subject, as did the Dutch Italianate painters Herman van Swanevelt and Jan Both. Both’s approach to the narrative was very different from Cuyp’s (fig. 1): Jan separated the baptismal group from the carriage, which waits around a bend in the road, while Cuyp brought his figures forward on a tiered stage. In addition, Jan Both frequently arranged trees in the foreground in order to delineate space. Cuyp, in the exhibited Baptism of the Eunuch, used a grove of trees as a backdrop for the figures. Jan Both’s painting remains a beautiful landscape with staffage — appropriate to almost any historical narrative — while Cuyp molded his landscape setting around the biblical subject.

In 1683, Roeloff Francken, who was from Dordrecht but lived near The Hague, owned a painting by Aelbert Cuyp of the Baptism of the Eunuch. A large Baptism of the Eunuch painted by Aelbert Cuyp was also recorded in the collection of the Dordrecht merchant and art dealer Aert Teggers in 1688, when it was valued at twenty guilders. Several other depictions of the Baptism of the Eunuch are recorded in Dordrecht inventories, which suggests that the subject may have been more popular there than in other cities.
· Unlike some of the other historic monuments and ruins Cuyp depicted in his paintings — for example, the Valkhof in Nijmegen (cats. 33, 34) or Huis te Merwede (cat. 32), whose remains survive to the present day — Ubbergan castle does not exist anymore. The identification of the castle is based on a drawing by Cuyp in Vienna, which bears an inscription identifying the building (cat. 88).

The castle was probably built during the second half of the fourteenth century for Johan van Ubbergen, Count of Nijmegen, at the foot of the Ubberger Berg (Ubbergan mountain) on the banks of the Ubberger Meer, a lake that has since disappeared. At that time it was meant to replace a nearby castle, which was torn down after the new building had been erected. The new castle had a square ground plan with four corner towers, similar in type to the castles of Moyland, Ammersoyen, Brederode, and Muiden. The earliest depiction of Ubbergan castle can be found on a map drawn by the surveyor Thomas Witteroo in 1570.

The true significance of the castle for the history of the area and of the country as a whole, however, derives from its role in the Dutch revolt against Spain in the sixteenth century. On the evening of 23 August 1582, the castle was incinerated by the citizens of Ubbergan, probably to prevent it from being used as a base by Spanish troops. The present picture shows the ruins that were left after the fire (although parts of the building had been refurbished during the first half of the seventeenth century to make it habitable). Like Ubbergan castle, two other Dutch buildings, the Huis ter Kleef in Haarlem and Brederode castle near Leiden, were destroyed during the conflict with the Spanish, who had besieged the two cities. Because of their association with the war, these two buildings became important national symbols representing the struggle of the Dutch for independence from the despised Spanish oppression; this historic role turned them into popular subjects for numerous paintings and prints. For the same reasons, Ubbergan castle also became a national symbol, and Cuyp's depiction of its ruins must have evoked similar patriotic feelings with seventeenth-century viewers. Eventually the castle was demolished in 1742 and Baron Johan van Weldern built a new country house in its place, which was torn down in 1868 to make room for yet another building.

Cuyp would have seen the castle when he visited Nijmegen and its environs on his journey up the Rhine in 1651–1652. The drawing of the ruins in Vienna (cat. 88) sheds some light on Cuyp's working method. When he saw the castle, he probably made the drawing of the building on the site; back home in his studio, however, he added the hills in the background and the tree at the left.

The painting, which follows the drawing quite faithfully, including the added background scenery, is generally considered one of Cuyp's small masterpieces. It shows the ruins of the castle surrounded by the still water of the lake. The view is bathed in a hazy golden light, which subtly fuses the different elements of the composition and lends the scene a unified warm tonality ranging from light beige to dark brown and green. Here the drawing differs from the painting in that in the drawing the pronounced plasticity of the castle contrasts considerably with the much flatter background of the mountains. Also, Cuyp evidently decided not to use the prominent tree from the drawing as a repoussoir in the painting. Instead, the painting's composition is anchored by the figures of the horseman and shepherd on the near bank of the lake, silhouetted against the silvery water and the landscape in the distance. Faint outlines of these figures are also visible in the drawing. Once again, as in a number of other pictures, Cuyp juxtaposed a shepherd with a man on horseback (see, for example, cat. 45). Different interpretations account for this pairing of figures. The man on horseback could be a traveler who, having come to see the castle, is discussing the famous landmark with a local herder. Or, equally possible, the contrast between the two figures may serve to emphasize the elevated social position of the horseman, who might own an estate with a country house and land for hunting or agricultural production. The figure would thus represent the seigneurial privileges and responsibilities that Cuyp's patrons from the "aristocratic classes" enjoyed and undoubtedly recognized in many of his paintings.
With this picture Cuyp takes us to the ruins of the Huis te Merwede on a sunny, late-winter afternoon. The river next to the towering remains of the fortress is frozen, and people have gathered on the ice around a koekenzopie (a tent where refreshments are offered) to chat, eat, drink, and generally enjoy each other’s company. Toward the right and in the distance other people can be seen walking and skating across the ice. The white swan decorating the barrel on the horse-drawn sleigh in the foreground indicates that the beer has been provided by Dordrecht’s main brewery.

The Huis te Merwede just outside of Dordrecht was built at the beginning of the fourteenth century as a residence for Daniel van der Merwede on land leased from the Count of Holland. Two events have been connected to its eventual destruction. After the siege of Dordrecht in 1418, when Jan van Beieren, duke of Brabant, had turned the fortress into his residence, the city’s inhabitants, in a fit of revenge, attempted to destroy the building. The enormous Saint Elizabeth’s Flood of 1421 further damaged the structure and completely submerged the land around it. The ruins have been surrounded by water ever since. The flood was one of the most momentous and dramatic events in the history of Dordrecht. Not only did it harm the Huis te Merwede, but it also destroyed large parts of the environs of Dordrecht—much of this land was not reclaimed until well into the seventeenth century. The Huis te Merwede thus gained its historic significance through the two most disastrous events of Dordrecht’s past. Although not a patriotic symbol, such as Ubbergen castle (cats. 31, 88), the remains of the building became a popular monument that reminded the people of Dordrecht of the trials their city had overcome in order to become the prosperous economic center it was in Cuyp’s own day. Numerous artists, among them Abraham van Beyerin, Jan Porcellis, and, perhaps most frequently, Jan van Goyen, painted the Huis te Merwede, while Cuyp included the structure in several of his other works, as did some of his followers. The depiction of the ruins in the present painting is based on one of several sketches by Cuyp, now in the British Museum (fig. 1).

This picture is unusual within Cuyp’s oeuvre in that it is one of only three known winter scenes by his hand. Although the painting of winter landscapes had a long tradition in the Northern Netherlands, no other artist before Cuyp had combined the subject of a typical northern winter scene with this type of brilliant Italian lighting (see also fig. 2). Cuyp’s interpretation of the warm and atmospheric light—and its subtle reflections off the ice—infuses the picture with a bright mood and an almost cozy atmosphere, which stands in marked contrast to the much cooler, pale light of many of his colleagues’ winter landscapes. The handling of the structure of the ruin and the light appear close to Cuyp’s depiction of Ubbergen castle (cat. 31) as well as to his Landscape with Horse Trainers (cat. 39).

Indeed, Cuyp’s sensitive rendering of the shimmering light, comparable to that in his views of Nijmegen and Dordrecht (cats. 33–36), makes this painting one of his greatest accomplishments, a picture that “has not its equal of that Master in Europe,” as one nineteenth-century observer noted.
Ice Scene before the Huis te Merwede near Dordrecht
The medieval citadel called the Valkhof (falcon court), nestled within the town walls of Nijmegen, became a popular subject for Dutch artists in the early seventeenth century. Aelbert Cuyp was especially fascinated with the site, which he visited in 1652. He made numerous sketches and at least six paintings of Nijmegen, including the only known repetition of a composition in his oeuvre. Jan van Goyen had popularized the subject of Nijmegen in more than thirty paintings dating between 1635 and 1654.¹ His favorite vantage point seems to have been from a boat in midstream, amid ferries and fishing boats, with the Valkhof looming steeply upward. In two of Cuyp’s paintings of Nijmegen (cat. 33; and cat. 43, fig. 1), the point of view is similar to Van Goyen’s, but very different in atmosphere. The Valkhof is seen from a greater distance from across the river while Van Goyen’s sharp diagonals are entirely eliminated. Cuyp’s depictions, filtered through hazy yellow sunlight, take on a classical symmetry and repose. Cuyp’s paintings are closely based on a drawing he made on the spot (fig. 1).² While he straightened out some of the buildings to create a tidier composition, the paintings are faithful to the original sketch and even retain the borders of the composition determined by the edge of the sheet. This mise-en-page, encountered in other works by Cuyp, demonstrates the central role that Cuyp’s on-the-spot sketches played in the development of his paintings.

The Indianapolis painting is paired with a depiction of the Valkhof from the east, a view that had also been painted by Jan van Goyen. Cuyp again followed his sketch closely in creating his painting.³ The city fortifications follow the downward descent of the hill to the river — a composition that nearly mirrors the painting in Indianapolis. Both paintings are adorned with idealized shepherds tending their flocks. While the architecture in the Indianapolis picture glistens brilliantly in the morning sun, the pendant landscape is deeply shadowed by the setting sun, accompanied by a darker tone in the clouds. The paintings therefore represent contrasting times of day — such pairings of landscapes are

encountered in other works by Cuyp and were commonly recorded in seventeenth-century collections.4 Nijmegen was popularly known as the capital city of the ancient Batavians, the supposed precursors of the Dutch. Tacitus, in his *Historiae*, described the Batavians (a Germanic tribe that provided auxiliary troops for Roman legions) as having settled in the estuaries of the Maas and the Rhine. Their leader, the facially disfigured Gaius Julius Civilis (known as Claudius Civilis in the seventeenth century), had been brought before Nero on charges of rebellion, but had been acquitted. Civilis remained firmly opposed to Roman rule and organized a revolt to expel them.5 He set fire to his capital (the "Oppidum batavorum") in order to prevent its use by the Romans.

During the sixteenth century, Netherlandish scholars became especially interested in the Batavian revolt because it was such a compelling ancient precedent for the Dutch struggle for independence from Spain.6 This nationalistic myth grew in importance during the early years of the Dutch Republic. Justus Lipsius, for example, revised his edition of Tacitus in 1588 to include a call to arms: Claudius Civilis showed what the Dutch could do when their liberty was threatened by a distant, oppressive empire.7 The most influential writer on this subject was probably Hugo Grotius, who in 1610 freely interpreted the story of Claudius Civilis in contemporary terms in order to establish ancient precedents for the government of the new Dutch Republic.8 Grotius also popularized the notion that ancient Batavia covered all of the Seven United Provinces.9 Nijmegen's identification as the Batavian capital became especially important because it lay on the very border of the seventeenth-century Dutch Republic. Nijmegen's role in the Batavian revolt became fixed in the popular imagination, as the tale was recounted in nearly all civic and national histories.10 Artists such as Otto van Veen, Govaert Flinck, and most famously Rembrandt (his *Oath of the Batavians* is in the Nationalmuseum, Stockholm) depicted episodes from Claudius Civilis' revolt.

Cuyp's paintings of Nijmegen were produced for collectors in Dordrecht, not for residents of Nijmegen itself. The images were not exercises in city pride, but signifiers of a national mythology, a role shared by contemporary literature on the subject. Through his gilded light and timeless peasants, Cuyp emphasized the role of the Valkhof as the capital of ancient Batavia. The herders contemplate the citadel from afar, just as figures in Batavian times must have gazed upon Nijmegen. Cuyp's depictions of Nijmegen are classical landscapes in the most general sense: they are ennobled and glorified reminiscences of a distant antiquity.
The Valkhof at Nijmegen from the Northwest
Dordrecht from the North

- The view of Dordrecht was one of the most prominent subjects within Aelbert Cuyp’s oeuvre, with depictions of the city and its environs appearing in more than twenty-five paintings and ten drawings (see also cats. 8, 18, 28, 36, 72, 80 – 84). What distinguishes this picture from the other representations of the city is the spectacular golden light of the afternoon sun, which floods the scene from the right (an unusual choice for Cuyp). Once again, much like in his view of Ulbregen Castle and the Ice Scene before the Huis te Merwede near Dordrecht (cats. 31, 32), Cuyp combined an identifiable northern setting with the warm, slightly hazy light he had adopted from his Italianate colleagues. Particularly noteworthy is the deft handling of the reflections of the light on the water’s surface and off the buildings in the distance. On the whole, the spectacular lighting transforms a depiction of everyday life on a river into a scene of unprecedented serenity and grandeur.

The painting shows Dordrecht from the northeast at the junction of several of the city’s most important and busiest waterways. At this point the river Beneden Merwede becomes the Oude Maas, and the Noord and the Dortse Kil split off toward Rotterdam and Antwerp respectively. The view of the city was based on a drawing now in Amsterdam (cat. 84), while the depiction of the boats and rafts was taken from a drawing in the British Museum (cat. 85). The painting depicts the harbor of Dordrecht after its rebuilding in 1647, when the old walls and turrets had been removed. To the left one can see the Groothoofdsport, whose spire preceded the dome put on in 1690, and the Korenbeurs (corn exchange). To the right of the Groothoofdsport are the Joppendoren (Joppen tower), the Damiaentbrug, and the Damiaenbolwerk (Damiaen bridge and bastion, respectively). In the back one can make out the Grote Kerk and further to the right the windmill, also known as the Standaardmolen, at the junction of the river and the Dortse Kil. The view of Dordrecht from the north was the most common prospect of the city. An important model must have been Adam Willaert’s view of the city (see Wheelock essay, fig. 8), which in the seventeenth century hung in the council chamber of the town hall.

The view of the river is dotted with different types of ships, ranging from a grand three-masted merchant ship to small cargo vessels and ferries. Adam Willaert’s picture similarly focuses on the activities that take place on the river before the city, highlighting the importance of river trade and traffic for Dordrecht. An unusual feature of the present picture is the inclusion of the wooden rafts visible in the middle distance. Cuyp and Willaert seem to be the only seventeenth-century Dutch artists who ever depicted them in their paintings. These floats consist of timber felled in Westphalia and Bavaria, and floated down the Rhine to supply hardwood for Dordrecht’s shipbuilding industry and timber trade. Although Rotterdam, Zaanland, and Hoorn had overtaken Dordrecht’s shipbuilding industry in the seventeenth century and cheaper timber was increasingly imported from Scandinavia and the Baltic region, the wood industry remained important and large floats of timber continued to arrive in Dordrecht. In the eighteenth century, Claes Bruin still described the floats in exuberant terms:

What do we see here floating on the water
what great monster rushes towards us?
It has drifted down stream,
and is full of life and motion.
It is an oak float,
chopped from German forests;
and, through commerce, is turned into gold.

The view of Dordrecht combined with its emphasis on the river as one of the main resources of Dordrecht’s economy must have resonated strongly with Cuyp’s fellow townsmen and wealthy patrons, and probably would have filled its viewers with civic pride.

The pronounced oblong format of the painting seems unusual, yet scholars have been divided as to whether it may have been cut along the top. The picture had actually been cut into two halves before 1774. Smith evidently had no idea that the two fragments once belonged together and described them, respectively, as a scene of early morning and as a scene “represented under the agreeable illusion of sunset.” The two pieces were only rejoined by a restorer in 1842. Although a nineteenth-century commentator who had seen the two halves side by side did not find them particularly noteworthy, today the painting certainly represents one of the most spectacular accomplishments within Cuyp’s idiosyncratic oeuvre.
Cuyp’s *Dordrecht from the North* at Kenwood House is very similar to the larger version at Ascott (cat. 35) — both show Dordrecht from the northeast and probably date from the same period. The buildings in the background can be clearly identified. On the extreme left one can just make out the entrance to the Voorstraatshaven (Voorstraats harbor) with the Boonbrug (Boon bridge), followed by the Groothoofdsport and the Korenbuurs, and further to the right the Joppentoren, the Damiatenbrug, and finally the Damiatenbolwerk. In the back one can see the Grote Kerk dominating the cityscape and further to the right, at the junction of the river and the Dortse Kil, the windmill that was known as the Standaardmolen. The clock on the spire of the Groothoofdsport shows five minutes past five, which means that the golden light flooding the scene from the right (the west) is that of the setting sun. As Arnold Houbraken wrote, Cuyp “paid attention to the time of day in which he portrayed his subjects, so that one can distinguish in his paintings the misty early morning from the bright afternoon and that again from the saffron-colored evening time.” As in the Ascott version, Cuyp’s great mastery is revealed in the handling of the warm light, which plays across the silvery water, the wooden ships, the plain sails, and the silhouette of the city in the distance and which infuses this scene of everyday life with a sense of majestic grandeur.

The painting shows Dordrecht’s newly rebuilt harbor (which had just been completed in 1647). On the water, various types of ships and boats pursue their daily business. The focal point of the composition is the large three-masted seagoing merchant ship lying at anchor. Behind it are several smaller sailing ships that were used as cargo vessels on inland waterways. The rowing boat at the left may be one of the ferries that regularly ran between Dordrecht and its neighboring towns. Floating by in front of an anchoring inland watercraft (on the right) is a raft — a common sight on the rivers around Dordrecht, though an uncommon feature in seventeenth-century Dutch art. Like Adam Willaerts’ 1629 “portrait of the city,” with its focus on Dordrecht’s busy waterways (see Wheelock essay, fig. 8), Cuyp’s views of the river would have made an equally strong impression on his patrons, the aspiring patricians and merchants of Dordrecht, who must have seen them as celebrations of the city’s beauty and economic success. Thus, Willaerts’ view may well have served as a source of inspiration for both the present painting and the picture from Ascott.

The relationship between the two pictures is difficult to determine. While the motif is almost identical in both paintings, the proportions of the Kenwood version are different — less oblong, with the raft and boats on the right moved closer to the city. The view thus appears somewhat compressed, which has led to discussions on whether it was cut along the right edge. Van Gelder and Jost suggested that the float must have once been complete, but no evidence exists to support such an alteration of the picture. Finally, whether this painting was executed before or after the Ascott version seems impossible to ascertain. Neither the presence of pentimenti, which occur in both pictures, nor the preparatory drawings in Amsterdam and London (cats. 84, 85) allow for any conclusions as to which picture may have been painted first.
• Before an expansive countryside, two horsemen have paused to rest under some trees. Having dismounted from his dappled gray horse, one sits to adjust his boot. Both riders wear exotic velvet jackets, which were probably part of Cuyp’s stock of studio costumes because they recur in other images. The two men have apparently been hunting, since they are accompanied by two dogs. The scene distills and simplifies the imagery that Aelbert Cuyp first perfected in his portrait of Michiel and Cornelis Pompe van Meerdervoort (cat. 29) and employed in several other equestrian portraits.

Not only is the setting comparable to the painting in the Metropolitan Museum of Art, but the costumes and accompanying dogs are also almost identical. However, such details as supporting servants and the depiction of an active hunt are missing. Instead, Cuyp imbues his picture with idyllic calm, undisturbed by any activity beyond the peaceful herder who tends a few cattle. Long shadows fall across the foreground and a ruddy light filters through the picture, setting this scene in the late afternoon, with hunters nearing the end of a long, exhausting day.

The wide river and distant mountain generally recall the scenery along the Rhine valley without being a topographically specific depiction of a site that Cuyp actually saw. The painting resembles the Wylerberg and the Wylermeer that Cuyp sketched in 1652 (a sheet formerly in the Duits collection) and employed in a painting (cat. 42). In his equestrian pictures, Cuyp often included a figure adjusting his boot, as for example in a painting of riders stopping for refreshment at an inn (private collection) and in a depiction of riders with an African page (see Gordenker essay, fig. 7).
Horsemen and Herdsmen with Cattle

- This broad, panoramic view of a river valley has long been considered one of Cuyp’s most masterful works. The golden light of the late afternoon sun and the moist air in the broad valley soften the landscape, casting a quiet, peaceful spell over the scene. In the foreground two elegant herdsmen, whose exotic costumes indicate that they have come from a distant land, pause to discuss their route. Behind them, in the shadow of a group of large trees, two shepherds rest amidst their animals. Another herdsman and his cows appear at the left, while a lone rider gallops along in the middle distance.

The pastoral quality of the scene reflects the influence of Dutch artists who had traveled to Italy and brought back images of the Roman campagna. Particularly important was the work of Jan Both, who similarly set off views of distant river valleys with elegant trees grouped to one side (see Wethey, essay, fig. 19). Jan Both also favored the contre-jour effects of the late afternoon light and frequently painted long diagonal shadows cast by the setting sun, atmospheric elements particularly apparent in this work. However, the connections between Cuyp’s pastoral scenes and Both’s Italianate views can be overstated. Peasants with their donkeys pass through Both’s mountainous landscapes, whereas in this work, elegant foreigners ride finely bred steeds through a broad, open landscape. The distinctive character of Cuyp’s travelers indicates that his approach is fundamentally different from Jan Both’s, whose peasants fit comfortably into his landscapes as integral components of the artist’s idealized vision of the Roman campagna. Cuyp’s travelers, on the other hand, do not belong to the land nor do they fit within it. The exotic herdsmen provide striking visual accents for the composition, but they also engage the viewer, raising questions about the riders’ identities, their travels, and their destination.

Despite the evocative quality of Cuyp’s pastoral scene, the landscape is based on a real site: the Rhine valley near the towns of Cleves and Calcar, not far from the Dutch border. The identifying features are two background hills: Monterberg, the steep-sided hill on the left with twin towers at its summit, and Eltenberg, surmounted by the partially ruined monastery of Hochelen. These hills, also depicted in other paintings (see cat. 29), are recognizable from drawings of these sites that Cuyp made on his trip to this area of the Rhine in about 1651–1652 (see cats. 91, 92).

Nevertheless a comparison with these drawings indicates that Cuyp freely interpreted topographic elements in this painting. He represented Monterberg as a much higher hill than it actually was, and the two towers are only seen to such advantage from the opposite viewpoint. Finally, Monterberg and Eltenberg do not lie in such close proximity and cannot be seen together in the way Cuyp represented them. Given the freedom with which the artist combined these landscape elements, the towns vaguely discernible in the river valley are probably Cuyp’s own creations, intended to suggest the character of this beautiful stretch along the Rhine.

Aside from reusing landscape motifs, Cuyp also repeated figures and animal motifs in his paintings. For example, the gray horse is identical to that in Lady and Gentleman on Horseback (cat. 40), and the galloping horse and rider reappear in Michiel and Cornelis Pompe van Meerdervoort with Their Tutor (cat. 29). The ease with which Cuyp reused motifs in his paintings and the fact that he rarely dated his landscapes make it difficult to establish an exact chronology for his work. Nevertheless, the expansiveness of the panorama; the soft, atmospheric qualities of the river valley, which derive from Cuyp’s broad, planar technique of applying paint; and the elegance of the riders are elements associated with paintings Cuyp started in the mid-to-late 1650s. Other distinctive characteristics of Cuyp’s mature style are an increasing artificiality of light effects and the introduction in the foreground of twisted saplings and large decorative leaves. This artificiality is particularly striking in this painting, in which diagonal shadows fall across rocks and foliage without any indication of the three-dimensionality of the landscape elements. A painting in the Toledo Museum of Art contains similar characteristics: Landscape with Horse Trainers (cat. 39) hung as pendant to the Washington picture, which is exactly the same size, when the two paintings were together in the Van Slingeland collection in the eighteenth century.

AKW
Horsemen played a surprisingly important role in Aelbert Cuyp’s pictorial world. Many of his paintings focus upon riders journeying through a landscape (cat. 38), some capture a moment of interaction between horsemen and shepherds (cat. 25), while still others include hunters at full gallop in pursuit of game (cat. 29). He also painted portraits of wealthy aristocrats astride horses, generally but not always preparing for the hunt (cats. 29, 40). Among the most fascinating and unusual of Cuyp’s equestrian paintings is this remarkable work, which depicts an elegantly dressed equestrian directing two grooms training a horse in the art of dressage. This work may well be the painting Arnold Houbraken considered one of Cuyp’s finest.¹

They are teaching the horse to perform a levade, a movement (requiring great skill from both horse and rider) in which the horse rises on its hind legs while keeping its forelegs tucked in.² The codification of such specific formal movements in equitation developed in European courts in the latter half of the sixteenth century. One of the most successful riding masters of this period was Antoine de Pluvinel, who founded a riding academy in Paris in 1594.³ He eventually became riding instructor for the French dauphin, later Louis xiii. Pluvinel’s fame was extended throughout Europe by his treatise L’Instruction du Roy en l’exercice de monter à cheval (Paris, 1625), which was lavishly illustrated by the Dutch engraver Crispijn van de Passe (c. 1597 – c. 1670) (fig. 1).⁴ In the Netherlands, the publication served as a model not only for young aristocrats intent upon learning the equitation fashions then current in the French court, but also for the artists they commissioned to portray their equestrian achievements.⁵ When Cuyp came to paint this work, he similarly turned to Van de Passe’s engravings in De Pluvinel’s manual to find a model for representing the levade. Interestingly, Cuyp may have actually known Van de Passe, who lived in Utrecht from 1630 to 1639, the very period in which Cuyp probably visited that city to enhance his artistic training.⁶

The Toledo landscape’s idyllic setting is far more Mediterranean in character than Dutch. Warmed by the golden light of the setting sun, the scene is situated on a field before an imposing Romanesque church, whose softly diffused form is silhouetted against the late afternoon sky. Nearby, two classicizing figural sculptures on large pedastals reinforce the aristocratic tenor of the subject, while fragments of classical columns in the foreground left and ruins flanking the scene reinforce the sense of nostalgia for faraway times and lands.⁷ Nevertheless, as in Horsemen and Herdsmen with Cattle (cat. 38), Cuyp derived elements of his scene from Dutch sources. He based the church on the imposing Mariakerk in Utrecht, while the distant hills reflect the landscape he recorded on his Rhine trip of 1651–1652.⁸

In both the subject matter and style, this scene seems to reflect the aristocratic aspirations of Cuyp’s wealthy patrons during the mid-1650s.⁹ The painting’s large scale, similar to that of other works by Cuyp from this period, indicates that it was probably destined for a country house located near Dordrecht.¹⁰ Such properties were then being built near most Dutch urban centers, as both country retreats and symbols of a patrician status.¹¹

Although the patron who commissioned this work is unknown, it formed part of Johan van der Linden van Slingeland’s extensive collection of Cuyp paintings.¹² Since Van Slingeland hung this work as a pendant to Horsemen and Herdsmen with Cattle (cat. 38), he probably acquired the two identically sized, related paintings from the same collection. Thematic and compositional relationships, however, are not sufficiently strong to argue that Cuyp originally conceived the two works as pendants. ¹³

¹ Crispijn van de Passe, King Louis xiii Performing à Levade, from Antoine de Pluvinel, L’Instruction du Roy en l’exercice de monter à cheval (Paris, 1625).

² Pluvinel’s treatise was published in Dutch as De rijbaarsche kunst (Amsterdam, 1630), and in Latin as De arte equitandi (Amsterdam, 1637).

³ Pluvinel was born in Paris in 1565 and died there in 1628. His treatise was first published in French in 1625.

⁴ The levade is depicted on the title page of Pluvinel’s treatise, which was published in Amsterdam in 1625.

⁵ Houbraken’s equestrian portrait of Van de Passe is now in the Rijksmuseum in Amsterdam.

Lady and Gentleman on Horseback

begun c. 1655, completed 1660 / 1665, oil on canvas, 123 x 172 (48 1/2 x 67 3/4), National Gallery of Art, Washington, Widener Collection

- Although the hunt became a popular pastime for Dutch patricians in the second half of the seventeenth century and numerous representations of the sport exist, Cuyp was the only Dutch artist to create large-scale formal portraits of aristocrats engaged in this activity (see also cat. 29). Lady and Gentleman on Horseback, which is the largest and most imposing of these works, is unique in that it represents an elegant equestrian couple, probably a husband and wife, setting out for the hunt. With an expansive light-filled arcadian landscape stretching behind them, they embark with two types of hounds: tufters to track the deer and follow the scent and greyhounds (under the control of an attendant) to run after the deer and bring them to bay.

The names of the sitters are not known with certainty. Nevertheless, a promising clue to their identity is a bust-length portrait, based on the male rider in this painting, which has been traditionally identified as Adriaen Stevensz Snouck (c. 1634 – 1671). Alan Chong, who discovered the resemblance between the two heads, has noted that Snouck, originally from Rotterdam, lived in The Hague until his marriage to Erkenraad Berk Matthisdr (1638 – 1712) in 1654. This marriage would have brought Snouck into contact with Cuyp since Erkenraad was the daughter of Matthijs Berk, Raad-Pensionaris of Dordrecht and an important patron of the artist. This theory may well account for the prominence given the female sitter, who, resplendent in her gorgeous blue dress, is mounted on a white horse with a brilliant red and gold saddlecloth.

Chong’s identification of the sitters accords well with technical examinations of the painting. As is evident in the x-radiographs (fig. 1), Cuyp overpainted and changed major portions of Lady and Gentleman on Horseback. The man originally wore a hat, had shorter hair, and his collar lay flat on his shoulders. He also wore a military-style tunic-and-cape combination, adorned with braids and buttons (presumably gold). This costume, whose overall color was apparently a brilliant red rather than the current brown, was in many respects not unlike that worn by Jan Six in Rembrandt’s famous portrait of 1654 in the Six Collection, Amsterdam.

The woman’s costume was also substantially changed: her hat was a different shape and its feathers sat farther back on her head. Her dress fit more loosely and seems to have fallen over the right flank of her horse. In place of the fairly low, elegantly gathered neckline of the final version, Cuyp originally painted a plain flat collar that covered her
Lady and Gentleman on Horseback
Aside from changes in the figures’ costumes, Cuyp also substantially modified the mood of the painting through changes in the woman’s pose and in the arrangement of figures in the landscape. The woman originally assumed a less demure position, with her right arm extended, presumably to hold the reins tightly. This gesture would have given her a more active appearance than is evident in the final version. The background was also more dynamic. Instead of the two greyhounds and the young attendant walking behind the riders, Cuyp originally included five running greyhounds and a somewhat larger young man in red socks running with them. The juxtaposition of the portraits and the background figures would thus have been similar to that seen in the painting of the Pompe van Meerdervoort family in the Metropolitan Museum of Art (cat. 29). Finally, the landscape also sloped in from the left, and Cuyp may have made changes to the fanciful castlelike building at the far left.

Although no specific symbolism relating to marriage exists in the painting, the hunt as a theme was metaphorically linked with the game of love. Also, the large burdock leaves in the foreground were frequently associated with love. Cuyp had a special fondness for this plant and included it in the foreground of a number of his paintings (see cat. 39). In most of these works the symbolic associations of the burdock leaf seem irrelevant to the meaning of the painting, but in this instance, with the dog calling attention to its presence, Cuyp may have intended to convey its symbolic associations.

The remarkable revisions in the painting suggest that the patrons were dissatisfied with the original composition. One may speculate that the activity of the hunt distracted from the formal character of the double portrait. The substantial modifications in costume, however, also suggest that the sitters wanted to update their image. For example, the male rider’s dignified brown jacket crossed by a sash and his long, wavy hair worn falling over the shoulders only came into vogue about 1660. Cuyp’s patrons may also have desired a more refined style of portraiture than the artist had provided in his initial version. Indeed, these portraits are remarkably elegant for Cuyp, who is not noted for his nuanced modeling of the human form. Their style reflects that of Nicolaes Maes (1634 – 1693), who, after returning to Dordrecht in the mid-1650s, initiated a new vogue of portraiture in Dordrecht patterned on the model of Anthony van Dyck (1599 – 1641). Maes’ Dordrecht portraits captured the elegant, aristocratic aspirations of a society that had begun to fashion itself after French styles of dress and decorum, and Cuyp clearly learned from his example.

Flight into Egypt

On the night after the three wise men had found the newborn Jesus in Bethlehem, Joseph had a dream in which the Lord commanded him to "Arise, and take the young child and his mother, and flee into Egypt, and be thou there until I bring thee word: for Herod will seek the young child to destroy him." So, Joseph arose and "took the young child and his mother by night, and departed into Egypt" (Matthew 2:13–14).

This short narrative describing the Christ child's escape from certain death at the hands of Herod the tyrant is among the most compelling episodes from Christ's childhood. Of the legends and depictions of this event that have since sought to capture the essence of the story, Cuyp's is one of the more benign and genteel ever created. Instead of portraying the holy family apprehensively wending its way across unknown lands under a moonlit sky, as did Adam Elsheimer (fig. 1), Cuyp depicted the journey as one without urgency or danger: it takes place in the fullness of daylight with gentle clouds wafting overhead. As Joseph leads the donkey carrying Mary and the Christ child to their distant destination, the late afternoon sun casts a warm and embracing light, illuminating the landscape of steep cliffs and placid water through which they pass. The well-worn path they travel offers no resistance to their progress, and their presence elicits little notice from two nearby cowherds.

This sun-filled scene has long been admired, among others by Gustav Waagen, who commented in 1854 that "the composition itself has something more noble and poetical than is usual with [Cuyp]; to this is added a rare power and energy of foreground with the most delicate gradation of the clear tones to the warm evening sky, so that the picture is one of the most beautiful that ever came from the hand of this master." Despite his enthusiastic comments, Waagen apparently did not realize that the foreground group is the holy family, probably because comparable motifs of peasants traveling through the countryside are commonly found in Cuyp's work (see cat. 24). In this instance, Cuyp clearly identified the family by placing Joseph's saw in the donkey's pack.

Flight into Egypt generally reflects the influence of Jan Both's Italianate views of the late 1640s and early 1650s, in which peasants and their donkeys similarly travel along winding paths (see Wheelock essay, fig. 19). Nevertheless, Cuyp's work, which is one of the purest expressions of his late painting style, has a clarity of light quite different from that found in landscapes by the Utrecht artist. Cuyp grounded his scene with more defined compositional elements, including the horizontal flow of the river, the vertical thrust of the cliffs, and the weighty mass of the foreground trees.

The cliffs along this river valley are reminiscent of the landscape that Cuyp witnessed during his trip along the Rhine in the early 1650s (see cats. 33, 42), particularly between Nijmegen and Elten. However, the painting must date some years later, probably in the mid-to-late 1650s, when Cuyp began to feature the elegant tracery of foreground bushes and generalized, atmospheric, distant river valleys. Similar landscape features in Cuyp's paintings from the mid-1650s remain truer to the actual topography of the area than those in this work. AKW
Flight into Egypt
River Landscape with Two Horsemen

late 1650s, oil on canvas, 128 × 227.5 (50 ¾ × 89 ¾). Rijksmuseum, Amsterdam

- One of the most curious aspects of Aelbert Cuyp’s works is their scarcity in Dutch collections.\(^1\) After the (late) discovery of the artist by English collectors in the eighteenth century, “the flight of his paintings from Holland was immediate and total”\(^2\) — particularly with the sale in 1785 of the collection of Johan van der Linden van Slingeland, who had owned forty-one paintings by the master. By the turn of the century, hardly any paintings of significance by Cuyp remained in the country — a notable exception is the *Equestrian Portrait of Pieter de Roovere*, which was sold by a descendant of its original owner directly to the Mauritshuis in The Hague in 1820.\(^3\) *River Landscape with Two Horsemen* is one of the few paintings by Cuyp (and probably the most important) that has found its way back to the Netherlands. With its acquisition in 1957, the Rijksmuseum was able to fill an all too noticeable gap in its otherwise comprehensive and distinguished collection of Dutch paintings.

Typically for Cuyp’s late works, the painting shows a sun-drenched landscape that extends along the banks of a river. In the middle distance the setting is framed on the right by a row of hills with some farm buildings nestled at their base. In the hazy light of the distance, a town is silhouetted against some distant hills. In contrast to most of Cuyp’s late landscapes (see cats. 38, 44, 45) here he avoided the inclusion of any large trees that separate the foreground from the deeply receding landscape. The entire scene is bathed in Cuyp’s characteristic golden sunlight, with long shadows cast across the scene. Particularly noteworthy is Cuyp’s adept handling of the shimmering light on different surfaces. The focal point of the composition is the foreground group of two men on horseback, who have evidently interrupted their journey in order to water their mounts. Judging by the light armor (breast-plate and backplate) and the orange sash, the man on the left must be a Dutch soldier, while his traveling companion appears to be an elegantly dressed civilian.\(^4\) Cuyp juxtaposed the horsemen with a shepherd who, momentarily distracted from his herd, watches them from a distance. This contrast between members of different groups of society is a frequent ingredient in Cuyp’s “landscapes of power,” most likely because it would have resonated with his patrons, the economically and socially ambitious patricians and merchants of Dordrecht who often aspired to the lifestyle of feudal landlords.\(^5\)

The picture rather accurately portrays a view of the landscape between Nijmegen and Cleves, the Wylermeer and Wylerberg. Cuyp must have seen this area on his travels along the Rhine in the early 1650s.\(^6\) for his painted view very closely follows a drawing he seems to have made on the spot (fig. 1).\(^7\) The peaceful scenery with its hills and still water, the beautiful resting cows, the picturesque farm, and, above all, the golden afternoon light lend the picture a sense of artifice and grandeur, which suggests a world far removed from the prosaic, flat, wet, and cold scenery of the Northern Netherlands. One is meant to behold and quietly enjoy this idealized world of pastoral beauty and serene tranquility. Typically for Cuyp, this elevated, vaguely arcadian mood is evoked by the setting itself rather than through the inclusion of classically inspired staffage acting out scenes taken from literary sources. By contrast, arcadian and pastoral paintings by Claude Lorrain and Nicolas Poussin as well as by earlier Dutch painters such as Abraham Bloemaert, Cornelis van Poelenburgh, and Bartholomeus Breenbergh rely on the inclusion of scenes from classical mythology and pastoral plays.\(^8\) Based on Cuyp’s spectacular handling of the light and atmospheric effects in this picture, Smith had already recognized it in 1842 as one of the artist’s finest accomplishments: “It is impossible to commend too highly this beautiful work of art… the wonderful and lovely gradation of tints and atmospheric truth, justly entitle it to the first rank among his best productions.”\(^9\)
Landscap e with a View of the Valkhof, Nijmegen

late 1650s, oil on canvas, 113 x 165 (44 1/2 x 64 15/16). National Gallery of Scotland, Edinburgh

• Several years after painting a pair of views of Nijmegen (cats. 33, 34), Aelbert Cuyp created a second set of pendants on a much larger scale. Cuyp repeated the view of the Valkhof from the northwest (fig. 1), but constructed a different companion piece — a view of the Valkhof’s southwest gate. Like the artist’s other paintings of Nijmegen, this was based on a sketch that the artist had made on his visit to Nijmegen in 1652 (The Pierpont Morgan Library, New York). The long shadows framing delicately striated clouds and the direction of the sunlight indicate that this is a summer afternoon. As with The Valkhof at Nijmegen from the East (cat. 34), the rich browns of the picture contrast with the brighter tones of its pendant.

The figures encountered in the two sets of pendants create different effects and moods. While the earlier set of pendants is peopled by contented shepherds, Cuyp depicted elegant horsemen in the later pair. Here, a rider on horseback, his cape artfully arranged, is the most prominent of the travelers who pass through the city gate. Whereas peasants occupy centerstage in the earlier northwest view (cat. 33), in the later view (fig. 1) they have been moved to the edge of the bank, where they watch two elegant horsemen ride past. The imagery that Cuyp perfected in his equestrian portraits — wealthy horsemen set against deferential peasants — is deployed here against an imposing historic site.

Although the identification of Nijmegen as the ancient Batavian capital appears to have been the predominant association in the seventeenth century, more recent events connected with the site were also well known. The town had been a seat of Charlemagne and had played a major role in the Dutch Revolt. Nijmegen had fallen to the Spanish in 1585, and the Dutch general Marten Schenk had drowned attempting to recapture it. In 1591, Prince Maurits had liberated the town and declared the Valkhof a palace of the stadtholder. Louise Henriette, daughter of stadtholder Frederik Hendrik, and her new husband Friedrich Wilhelm, Kurfürst of Brandenburg, had paid a state visit to Nijmegen in 1647. Brandenburg had long been a close ally of the Dutch Republic and controlled the neighboring territories of Cleves and Emmerich. In addition, a cousin of the stadtholder, Jan Maurits of Nassau-Siegen (the Brazilian adventurer and builder of the Mauritshuis), had just been appointed stadtholder of Cleves, which strengthened ties between Brandenburg and the house of Orange. The elaborate ceremonies welcoming the guests are the subject of Cuyp’s depiction of waterborne festivities at Nijmegen (fig. 2).

Images of Nijmegen were widely circulated and immediately recognizable to seventeenth-century viewers. The distinctive outline of the Valkhof graced numerous maps and atlases. Joan Blaeu’s popular atlas of Dutch towns included a map and view of Nijmegen, along with an extended commentary describing the city’s history. Seventeenth-century inventories also attest that collectors recognized paintings, including works by Cuyp, as depictions of Nijmegen.
Evening Landscape

- This spectacular painting of a hilly landscape suffused with the golden, hazy light of the setting afternoon sun belongs to a group of pictures that stands at the end of Cuyp’s career as a painter.¹ One of the common denominators shared by Cuyp’s late landscapes is the setting. As John Smith had already observed, both the River Landscape with Two Horsemen from Amsterdam (cat. 42) and the present work depict the landscape of the environs of the Rhine between Nijmegen and Cleves. Cuyp had traveled to this region in 1651–1652 and produced numerous sketches of the local scenery with its steep and sloping hills, views of the river and its tributaries, and silhouettes of distant towns (see cat. 92). While the painting in Amsterdam is topographically accurate, here Cuyp freely varied different aspects of the landscape he had encountered, without forfeiting its general recognizable character.

However, while a number of parallels exist between these late paintings, the composition of the present picture varies in a significant way. In contrast to the works in which the viewer enters the picture on a sandy path that extends from the immediate foreground (cats. 42, 45), here access is almost blocked by the “barrier” of plants and the pool of water in the immediate foreground. On the path beyond are two men on horseback, who, in characteristic Cuyp fashion, have interrupted their journey to ask a shepherd for directions.² The group appears almost sheltered by the screen of tall trees to their left. The path continues farther toward the left, turning into a ridge that is sharply outlined against the softly lit landscape beyond—a contrast that is underscored by the silhouette of the man riding on a donkey.³ Although this composition relates thematically to earlier works by Cuyp, the use of a ridge and a screen of tall trees to structure the composition suggests a renewed interest in the work of Jan Both (see Wheelock essay, fig. 19).⁴

What connects this picture most closely to Cuyp’s River Landscape with Horseman and Peasants (cat. 45), formerly in the collection of Lord Bute and now kept at the National Gallery, London, is the artist’s accomplished—and somewhat contrived—handling of light and atmospheric effects. While the town in the distance is engulfed by the bright haze of the moist atmosphere, in the foreground the warm afternoon sunlight coming in from the left casts long shadows across the scene and creates subtle contre-jour lighting effects. The pronounced highlights—“gilded edges”—on the different elements of the composition add what Gustav Waagen had already referred to as a “brightness of tone, approaching a silvery quality,” that was to become even more pronounced in the painting from the Bute collection.⁵ Smith, although not exactly exuberant in his praise, had already found that “the beauty of a fine summer’s evening gives value to the scene.”⁶ As with all of Cuyp’s late landscapes, the Italian lighting infuses the native northern setting with a sense of splendor and elegance, which evokes an idealized world of quiet peace and pastoral tranquility that would have appealed to the imagination of Cuyp’s wealthy urban clientele, who often owned sizeable country estates. AR
Besides being perhaps Cuyp’s most accomplished picture, this work also represents one of the high points of Dutch landscape painting of the seventeenth century. The scene — a path winding along a river at the foot of a range of hills, with a town visible in the distance — was inspired by the area along the Rhine between Nijmegen and Cleves, where Cuyp had traveled in the early 1650s. On the sandy path that extends from the immediate foreground, past a herd of resting cows, an elegantly dressed rider has stopped to speak to the cowherd. From the latter’s gesture, one may surmise that the horseman has asked for directions. Ahead of the rider walks a man, and just beyond, a shepherdess tends to a flock of sheep. The warm light of the late afternoon sun suffuses the entire picture, shrouding the distant scenery in Cuyp’s characteristic golden haze, which depicts the effect of moisture in the air. The foreground figures, animals, and trees cast long shadows across the path. The light, coming diagonally from behind, creates a contre-jour effect, which emphasizes the contours of the figures, animals, and plants with bright silvery highlights. Nothing, it seems, could disturb the sense of peace and tranquility that pervades the scene — until the gun of the barely noticeable duck hunter crouching in the left foreground goes off!

It has been suggested that the confrontation between an elegant figure on horseback, most likely of elevated social position, and a simple herdsman (a recurring motif in Cuyp’s paintings) was meant to underscore the former’s superiority. He would have been the figure in the painting with whom the artist’s wealthy patrons would have easily identified. However, this interpretation relies on a view of herders and shepherds as lowly and inferior. Contemporary pastoral literature, on the other hand, often celebrated the “wise herder” and his simple and virtuous life by contrasting it with the potentially corrupt life of the ambitious courtier. Although this scene was inspired by views Cuyp had encountered and recorded during his trip along the Rhine, nothing indicates that it was meant to be topographically accurate. Indeed the tall mountains seem entirely imaginary. This type of artistic license is not unusual; Cuyp occasionally embellished actual views he had recorded in his sketchbook (see cat. 38). The lighting and the composition, particularly the screen of trees, are similar to those in Evening Landscape in the British Royal Collection (cat. 44) and appear to have been inspired by Cuyp’s renewed interest in the work of Jan Both.

The common impression that this picture was the first painting by Cuyp to enter the United Kingdom when it was bought by William Baillie, who thereby set off a craze for Cuyp’s pictures among English collectors, is based on a discussion between Benjamin West and Joseph Farington during their visit to the British Institution exhibition of 1818. However, if one is to believe Noel Desenfans, the dealer who bought several paintings by Cuyp for the collection of the king of Poland, works by the master had already been imported into England in 1740 by a Swiss merchant.

Very early on, the picture was held in high regard in England, where John Boydell published a laudatory description of it in 1769. This passage, which accompanies A View on the Maas near Maestricht, a print of 1764 by William Elliott (see Chong essay, fig. 7), refers to Cuyp as the “Dutch Claude,” a label that was to stay with Cuyp until well into the nineteenth century.

The print by Elliott, which not only shows the sky extending farther at the top but also gives the dimensions of the pictures as 60 by 65 inches, has raised the question of whether the painting was cut along the top in the late eighteenth or early nineteenth century. However, careful examination in the conservation studio of the National Gallery, London, has shown that the picture’s original unpainted edges are intact on all four sides. Possible explanations for the discrepancy between the painting and Elliott’s print are that either the painting at one stage had an addition at the top or that the engraver simply applied artistic license when he copied the work. Unfortunately no preparatory drawings, which might provide further clues, have been identified for the print. However, even without the extension, the picture is the largest painting Cuyp ever executed. Although nothing is known about its original whereabouts, it most likely was destined for the grand home of one of Cuyp’s wealthy patrons from Dordrecht’s regent class — a world the artist himself had joined by this time.

5. Jacob Cuyp’s painting, which is signed and dated 1639 (Sotheby’s, New York, January 2001), indicates how closely father and son were working at this period. Although Jacob was the senior artist, there is no reason to believe that he took up the subject first. In 1994, I believed that the 1639 painting of jaguars by Jacob Cuyp suggested that the jaguars in the exhibited work were also by Jacob (Chong 1994b, 31), but when the paintings were brought together at the Dordrecht’s Museum in 1995, it was evident that the jaguars in the large Orpheus were entirely by Aelbert.
10. For example, a pamphlet discussing the 1609 truce: Aferedtige vanden Oude ende Nieuwenjt uier met Orpheus wandel, spoelt, singt ende speelt (c. 1616); catalogued in Müller 1863, no. 1302C.
11. Cuyp’s painting is recorded in the 1696 inventory of Albertina Agnes van Nassau (daughter of Amalia van Solms and Frederik Hendrik), who inherited nearly all of her paintings from her mother. See Dasshaer and Lunsingh Scheurleer 1974 – 1976, 2123.
12. Willem Goeree in 1670 exhorted artists, “In particular, one must take the chance to observe the exotic, such as lions, tigers, bears, elephants, camels, and similar animals, which one rarely sets eyes on, and which must be had for one’s inventions.” Goeree 1670, 121. A depiction of Orpheus could form the introductory vignette to a series of prints showing various animals, as found in Roger Danell’s Animalium quadrupedum, avium of 1628.

2. Paulus Potter used a similar device: his cows turn away from the viewer and, standing on a ridge, stare into a landscape that remains largely hidden. See for example his Bull, signed and dated 1649 (Gemäldegalerie, Staatliche Museen zu Berlin, inv. no. 872B; The Hague 1994, 31, fig. 22).
3. J.P. Richter in the catalogue of the Dulwich Picture Gallery was the first to identify the painting as an early work by Cuyp in the style of Jan van Goyen (Richter and Sparkes 1880, no. 192). The earlier catalogues of 1859 and 1876 had dismissed it as a copy. See also Chong 1991, 606, note 2.
4. Commonly, the *Dune Landscape* of 1631 (Herzog Anton Ulrich-Museum, Braunschweig, inv. no. 340; Beck 1973, no. 110) is cited as a related example. Chong 1992, 255, has observed similarities in the “brushing in of blue patches among the swirling clouds.” Other examples include a *Dune Landscape*, signed and dated 1619 (Städelisches Kunstinstitut, Frankfurt, inv. no. 1271; Beck 1973, no. 1077) and a *Dune Landscape* from a private collection, signed and dated 1630 (Beck 1973, no. 1071; Leiden 1996, no. 12).

6. The cattle also relate to a slightly earlier picture in a private collection (*Milking near a River with an Alley of Trees*, Reiss 1975, 27, no. 2; Chong 1992, 268, no. 3), to a drawing in the British Museum (*Pasture with Cattle*, Hind 1915–1932, 33, inv. no. Gg 2–129; see also Chong 1991, 606–608, figs. 41 and 44), and to a much earlier painting in another British private collection (*Farm Scene with a Panorama*, Chong 1992, no. 7; see also sale, Amsterdam, Sotheby’s, 14 November 1990, no. 89). It has also been suggested, albeit less convincingly, that the somewhat awkward anatomy of Cuyp’s “spiny and curvaceous” cows may have originated from the paintings of Cornelis van Poelenburgh (1594–1667) (Chong 1992, 254).

**Endnotes**

2. The painting lacks the moralizing element often discerned in Dutch portraits. On the interpretation of grapes as symbols of virginity and chastity, see De Jongh 1974, on fertility, see Bedaux 1930, 71–108. For an erotic interpretation of birds, see De Jongh 1968–1969.

3. Burnett 1969 as well as Van Gelder and Jost 1972 later concluded that the figures in the painting were by Jacob Cuyp and the landscape by Aelbert. Reiss 1953 had already implied as much. The signature is Jacob Cuyp’s, although the initial monogram had later been effaced and changed into an A, an addition removed in 1966.

4. Gemeente Archief, Dordrecht: ONA 262, f. 37–38, 697; ONA 172, f. 213v. A painting that is probably a group portrait by Jacob Cuyp dated 1641 appeared in the sale of Jacob Hendrik Voet, The Hague, 25 September 1780, no. 62, “De Aankomst van Vader met zyne Zoonen, benevens Vrouwen en Kinderen by Joseph, door J. Cuyp, Ao. 1641,” 13.5 guilders to Fouquet, which suggests that the painting was sent to France, where this work was first recorded.

Endnotes
1. On the mount of a photo of the picture at the Rijksbureau voor Kunsthistorische Documentatie (RKD) in The Hague, the village has been identified as Beverwijk, a town Cuyp had depicted in his View of Beverwijk (Harold Samuel Collection, London; Reiss 1975, 37, no. 9; Chong 1992, no. 19). Indeed the church towers in both pictures bear a certain resemblance with that town’s church, but it is not clear whether Cuyp had intended to depict a recognizable location in the present painting. Without giving any specific reasons, MacLaren and Brown 1991, 94, have argued that “it seems unlikely that Cuyp intended to show a precise topographical location.” Also, it is unclear whether the cluster of windmills on the horizon has been taken from an existing example. Their relative remoteness in the scene makes it unlikely that they were intended to carry any symbolic connotations. Recognizable as a characteristic feature of the Dutch landscape, they were probably simply used as a compositional device to enliven the horizon.
2. Hamburg, Kunsthalle, inv. no. 21,812.
3. See Reiss in London 1973, no. 3. Reiss 1975, 47, even states: “Cuyp never came closer to the plein-air technique of the Impressionists, nor painted a picture more daring in its simplicity.”
4. Evidently river fishing represented an important source of income for Dordrecht’s economy, for the fish caught were exported to England. See Dordrecht 1992, 35.
5. See also Chong 1992, 257–258.

Provenance

Literature
Burlington Magazine 1942, 81: 259, fig. A

Endnotes
1. Chong 1991, 432, B6, has noted that the sketching figure is close to that in The Huis te Merwede, with an Artist in a Boat, Musée des Beaux-Arts, Château des Rohan, Strasbourg (Chong 1992, 430 – 431, B4; ill. in Reiss 1975, 105, no. 70).

2. Reiss 1975, 104, believed that the painting was a collaboration between Cupp and a staffage painter who executed the figures. He associated their style with Dordrecht genre painters Jan Olis (c. 1610 – 1676) and J. F. van der Meck (c. 1610 – 1664).

3. For the original Dutch of this poem by P.C. Ketel, which introduces Van Mander 1604, see essay by Wheelock, note 18. The English translation is taken from Buijzen in Leiden 1993, 47.

5. The shapes of the men's hats, collars, cloaks, and boots are consistent with costumes worn during the first half of the 1640s. For example, the turned-up front brim of the hat worn by the burgon on the left is comparable to that worn by an unknown man portrayed by Frans Hals in 1644 (Amsterdam, Six Collection). See Slive 1970–1974, 2: pl. 242.

12
Dordrecht Harbor by Moonlight

c. 1643–1645, oil on panel, 76.5 x 106.5 (30 3/4 x 41 1/4%).

Endnotes
2. Houbraken 1718–1721, i: 248. "Ossen, Koeien, Schapen, Paarden, Fruit, Landschap, stil water met Scheepen; 't scheen hem alies onverschillig te wezen, en daar men zig over verwonderen moet, is, dat hy alies even fraai en natuurlyk schilderde. Daarenboven heeft hy inzondeheden wel in agt genomen de tydstonden waar in hy de voorwerpen verbeelde, zoo dat men den benevelden morgenstond van den klaren middag, en dezen weer van den saffraan-wervigen avondstond in zyn tafereelen kost onderscheiden. Ook heb ik verscheide maaligeen van hem gezien die heel natuurlyk verbeelde waren, en zoo geschickt dat dezelve een aangename spiegel in't water maakten." The English translation is taken from Reiss 1975, 158.
3. Reiss 1975, 65, identified two night scenes that are currently lost (his catalogue numbers 75 and 77). See also Chong 1992, 106, no. 591 310–311, no. 61, 63.
4. This document, first published by Chong 1992, 307–308, records "een blixim van Kuyp / een Maneschijn van deselve."
5. In Montias 1987 and Montias 1990, the argument is made that economic factors influenced an artist's decision to introduce new subject matter and develop new stylistic modes of painting. This theory was expanded in Sluijters 1996, 52–54, in reference to the innovations of Jan van Goyen. These theories were modified in Falkenburg 1997, who questioned whether seventeenth-century viewers were aware of different categories of landscape painting. See also Montias 1987, 455–466; Montias 1990, 49–57.

7. See Melion 1991, 73–75.
8. This point is made by Falkenburg 1997, 144. The English translation of Angel’s text is taken from Angel 1956, 137.
10. Falkenburg 1997, 135, note 67, also mentioned that a series ("een reeks") of moonlight scenes by Maerten van der Hulst (active 1630–1645) and Pieter Melyn (1595–1661) are recorded in Haarlem archival documents from the late 1640s.

13
Landscape with Shepherds and Shepherdesses

c. 1643–1645, oil on panel, 77.5 x 107.5 (30 1/2 x 42 1/2%).
Private collection, Belgium

Inscription
Signed, lower left: A. Cuyp

Provenance
Mrs. Cosmo Bevan (sale, Robinson, Fisher & Harding, London, 10 November 1938, no. 178); Rita Bellesi, New York, by 1950; (Frederick Mount, New York, 1951); (Newhouse Galleries, New York, by 1978); S. T. Fee, Oklahoma City (sale, Christie’s, New York, 9 May 1985, lot 9, bought in); (sale, Sotheby’s, New York, 4 June 1987, lot 69); (Johnny van Haeften, London); private collection; (Noortman, Maastricht); private collection

Endnotes
1. Krul 1634b, 142 – 143. "Orlanghs geleden, eer dat de Zon / Vans Hemels-top zijn guilde stralen / Liet over 't vouchtigh Aerdrijck dalen: / Sagh iek mijn berminde Galathee / Komen drijven met haer Vee / Van de Kouwe dore strand, / Barrevoets door 't natte zand, / Na dehey- den, om te weyden / Hare Schaepjes, na 't begraeze Land."

2. For a comparable view of this hill, see the painting of the Battle of Schoenenschutz (1639, Gemeentemuseum Arnhem), by Pauvels van Hillewaert (1595 – 1640), ill. in Dattenberg 1967, 334 – 335.

3. Reiss 1975, 71, no. 38, describes this structure as a well. Deys 1861, 59, fig. 167, identifies the site as the Tafelberg near Rhenen. It would seem unlikely, however, that this structure is the Koningstafel (see cat. 17), since that stone marker had a square top. Deys 1861, 59, fig. 166, illustrates an anonymous drawing of a square stone table that includes the following handwritten inscription: 'a stadt Reene b des Conincks v. bohemens taeffel op den Rondebergh c den Rijn fluv d dorps.'

5. Reiss 1975, 75, no. 42.

14. Herdsmen with Cattle

C. 1645, oil on canvas, 99 x 144 (39 x 56 ¼). The Trustees of Dulwich Picture Gallery, London (128)

Provenance

Exhibitions

Literature

Endnotes
1. See, for example, Ubbergen Castle (cat. 31), Ice Scene before the Huis te Merwede near Dordrecht (cat. 32), Dordrecht from the North (cats. 35, 36), River Landscape with two Horsesmen (cat. 41), and River Landscape with Horsesmen and Peasants (cat. 45).

2. Hazlitt 1824, 10. See also Hazlitt 1842, 669. Peter George Parmore (1824, 171) used remarkably similar terms in his description of the painting in the same year: "It seems all — cattle, men, ground, hills, clouds, and all — made of woven air and sunshine. There are no marks of the pencil about it. You cannot tell how it got there — unless, as I before said, it has been breathed there."

3. Ruskin wrote, "Now I dare say that the sky of this first-rate Cuyp is very like an unripe nectarine all that I have to say about it is that it is exceedingly unlike a sky. The blue remains unchanged and ungraduated over three-fourths of it, down to the horizon, while the sun, in the left-hand corner, is surrounded with a halo, first of yellow and then of crude pink, both being separated from each other, and the last from the blue, as sharply as the belts of a rainbow... There is no such thing — there never was, and never will be such a thing, while God's heaven remains as it is made — as a serene sunset sky with its purple and rose belts around the sun." Ruskin also included a more personal attack on the artist: "Now it is difficult to conceive how any man calling himself a painter could impose such a thing on the public, and still more how the public can receive it." See Ruskin 1843, 1: part 2, section 3, chapter 1, paragraph 11; Ruskin 1901 – 1912, 1 (1903): 351; and Ruskin 1917, 91 – 92. See also Beresford 1998, 83, and Waterfield 1988, 22, 48.

4. See for example Landscape with a View of Beverwijk, (Harold Samuel Collection, Mansion House, London; Reiss 1975, 37, no. 9; Chong 1992, 279 – 280, no. 10); Cattle and Henders, with Mariakerk, Utrecht (cat. 5); River Landscape with Bridge (cat. 6); Herdsmen and cattle near Rhenen (Dulwich Picture Gallery, London, inv. no. 4); Reiss 1975, 75, no. 42; Chong 1992, 315 – 316, no. 68). While Reiss (1975, 77) had suggested that the picture "can be connected with Cuyp's etchings" Chong has argued that the standing cow may be similar but not identical to the one in the print illustrated by Reiss (Hollstein 4; Chong 1992, 324). Also, the herder seen from the back appears in a painting attributed to Cuyp of Shepherds Overlooking Amersfoort of before 1651 (Van der Heydt-Museum, Wuppertal, inv. G. 198; Reiss 1975, 52, no. 24; Chong 1992, 431 – 432, no. 85, who doubts the attribution).

5. Even though Houbraken celebrated Cuyp's ability to depict convincingly specific times of day, some earlier descriptions of the painting have confused the hour shown as early morning. Smith identified the scene as "representing the morning of a fine summer's day" (Smith 1839 – 1842, 5 [1834]: 302, no. 65). Hofstede de Groot mentioned the picture twice, referring to it as "a fine summer morning" and as "a blue sky, with red evening tints to the left" respectively (Hdg 1907 – 1927, 2 [1909]: 78, no. 237 and 101, no. 330).

6. See also Chong 1992, 324.

8. Peter George Patmore, writing in the same year as William Hazlitt, had already noted this aspect when he referred to the painting as ‘a more apt idea of the Golden Age of classical poets than all the classical work expressly intended to typify it— even those of Claude and Poussin, and this notwithstanding the perfect truth of the details introduced in them, and above all, the rude and altogether modern character of the figures, and the dresses they wear’ (Patmore 1824, 171). For more on this subject, see also the essay by Arthur Wheelock in this catalogue.

15 Woman in a Stable

1645–1648, oil on panel, 65 x 92 (25 3/4 x 36 1/4). Dordrechts Museum (DM / 983 / 580)

Inscription
Signed, lower right: A. Cuyp

Provenance

Exhibitions
Dordrecht and Leeuwarden 1988, no. 23; Dordrecht 1992, no. 17

Literature
Blanc 1857–1858, 2: 516; Hdg 1907–1927, 2 (1909): no. 54; De Groor 1983, no. 6, pl. 1; Chong 1992, no. 103; Gemar-Koeltzsch 1995, 2: 274, no. 87 / 1, repro.

Endnotes

3. “O nimium felix, et vera sorte beatus, / Cui licet immunes curis civilibus annos / Degere, dum tugurui tusus sub arundine vivat! / Non illi varijs anfractibus intricatur / Pectus, non dubio lucratu corde voluntas; / Composita sed mente, opibus contentus avitis, / Aut flavam segregem, matura / Aut arbore poma / Colligit, aut laetum pecus in sua pascua ductit. / Quod si uxor subebat partem officiosa laboris, / O nimium felix, et summa sorte beatus!” The lines are signed “G. Rycxius,” probably the Latinist Josse de Rijcke (1586–1627).

4. There is no suggestion that the dilapidated farmhouses that Bloemaert depicted in the series were meant to represent sloth or vice, as suggested by J. Bruyn in Amsterdam, Boston, and Philadelphia 1987, 85–86.

5. For example, Robert Campin’s Nativity (Dijon). See Baldwin 1985, 122–135. A seventeenth-century example of this is Abraham Bloemaert’s Holy Family (1632, Rijksmuseum, Amsterdam).

6. Rotterdam 1994, 132–141, 223, 228. In particular, the work of Herman Saftleven may have influenced Cuyp (see Schulz 1982, nos. 1–4).

7. A piece of wood about 4 cm wide has been added to the top of the painting at some point after the work was first completed; this appears to have been done by Cuyp himself.

16 Conversion of Saul

c. 1645–1648, oil on panel, 71 x 91 (27 3/4 x 35 1/4). Private collection

Inscription
Signed, lower right: A. Cuyp

Provenance
Johan van der Linden van Stingeland, Dordrecht (sale, Yver, Delfos, Dordrecht, 22 August 1785, no. 101, to Kielmans). Probably Philip Hill; (sale, Christie’s, London, 20 June 1807, no. 76, unsold); J.R. West, Alsclot Park, 1811; by descent to Capt. James Alston-Roberts-West, Alscot Park; (sale, Christie’s, London, 26 June 1844, no. 122). Dr. H. Werzlar, Amsterdam; (sale, Mak van Waay, Amsterdam, 9 June 1977, no. 66); J.H. van Litsenburg, Amsterdam; (Charles Roloesza, Amsterdam, 1984); Gerald Guttermen, New York; (sale, Sotheby’s, New York, 14 January 1988, no. 8, unsold). Private collection

Exhibitions
Birmingham 1831, no. 24; Laren 1966, no. 18; Dordrecht 1977, no. 27; Washington, Detroit, and Amsterdam 1980, no. 80

Literature
Smith 1829–1834 (1834): 256, under no. 35; Hdg 1907–1927, 2 (1909): no. 10; Reis 1975, 212 (as doubtful); Halewood 1982, 108, note 4; Chong 1992, no. 101

Endnotes

5. “A general warning is also given to us all, so that not one of us may attack Christ by injuring his brother unjustly, but especially so that not one of us resist the truth rashly and in a blind fury under the pretense of zealfulness” (Calvin 1965, 257).

6. See Drexelius 1627; Philip Sadeler produced a print of the Conversion of Saul for the book. See Marrone 1977. Thirty-six depictions of the Conversion of Saul are recorded in Dutch inventories between 1628 and 1710 (Provenance Index database). There is no real indication that the Conversion of Saul was preferred by Catholic collectors in Holland, although one of Cuyp’s Catholic patrons owned an anonymous depiction of the subject (ONA 160). See Montias in Freedberg and De Vries 1991, 356, 358.

7. Johan Diederic Pompe van Meerdervoort and Jan van Huysum sale, Amsterdam, 14 October 1749 (no. 15); “Een nijlpaard van de Bezoeking van Paulus,” 32 x 45, 13 gilders to Claes Mol. Although the properties of Pompe van Meerdervoort and the flower painter Jan van Huysum were not divided, the Cuyp painting almost certainly belonged to the former.

17
Two Horsemen on a Ridge

C. 1648–1648, oil on panel, 33 x 42.5 (13 x 16 ⅞). Private collection, New York

Inscription
Signed, lower left: A. Cuyp

Provenance
Walter Fawkes, Farnley Hall, Yorkshire, 1812; Ayscough Fawkes, Farnley Hall, Yorkshire; (sale, Christie’s, 26 June 1890, lot 79); (Thomas Agnew & Sons, London); Edward C. Guinness by descent to Lady Bridget Ness; private collection

Exhibitions
London 1922, no. 32

Literature
Neale 1818, no. 13; Stephens 1873, 407

Endnotes
1. Frederick v and his consort Elizabeth Stuart (also known as the Winter King and Winter Queen) had settled in the Netherlands in 1621 after he was deposed as king of Bohemia. Although they lived primarily in The Hague, they also resided in Rhenen after constructing a palace there in 1631. As noted by Huys Jansen and Sutton in The Hague 1991, 62, it is not known when the large stone table on top of Grebbeberg was erected or when it became known as Koningstaafel.

2. Sepp 1773, 85: “Aan de Westzijde [traveling from Wageningen to Rhenen] heeft men een zeer hooge Berg, welke veellyks bekomen word, om van daar een der fraaiste Gezichten over den Rhyn, als mede op de Neder-Betuwe, en over de Rheensche Vennen te aanschouwen.”

3. For depictions of Rhenen by Seghers and Van Goyen, as well as a list of Dutch artists who visited this region, see Dey 1981 and Sutton in Amsterdam, Boston, and Philadelphia 1987, 329–330.

4. Cuyp used this now-lost drawing when depicting a comparable river view in three other works: Stehleis with Their Fleece, private collection (Reiss 1975, 88, no. 53); Landscape with Two Horses, Mittelrheinisches Landesmuseum, Mainz (Reiss 1975, 89, no. 54); and A Horseman with a Cowherd, The National Gallery, London (inv. no. 812).

5. The situation is visible on map 24 of Sepp 1773 (see note 2).

18
The Maas at Dordrecht in a Storm

C. 1648–1650, oil on panel, 49.8 x 74.4 (19 ⅞ x 29 ¼). The National Gallery, London (6405)

Inscription
Signed, lower right: A. Cuyp

Provenance

Exhibitions
London 1887, no. 50; London 1920, no. 291; London 1922, no. 365; Norwich 1954, no. 5; London 1972, no. 6405; London 1976, no. 25; Dordrecht 1977, no. 28; Rotterdam and Berlin 1996, no. 50

Literature
Endnotes

1. In the literature the identification of the vessel is somewhat confusing. Chong 1992, 160, refers to the ship in the present picture (as well as in the painting in the Wallace Collection) as a wijdchip, an identification that is, surprisingly, taken up in the catalogue entry on the picture in the 1996 exhibition on Dutch marine painting (Rotterdam and Berlin 1996, 244). Rather, the vessel depicted is a smalschip, a freighter that was designed for inland waterways (Rotterdam and Berlin 1996, 30, where the ship from the present painting is illustrated as an example). See also the glossary of ships in Robinson 1990, 2:1134.

2. Inv. no. P49 (Chong 1992, 370, no. 140). Another comparable scene that also includes storm and lightning as well as several of the boats from the present composition, painted by a follower of Cuyp, is Ships in Stormy Weather (Musée du Louvre, Paris). Inv. no. 11951 (Chong 1992, 476 - 477, no. C84). The comparison of this work and the picture from the Wallace Collection has in the past been used in order to determine a date for the present picture. Reiss argued for a date of the early 1650s for the Wallace Collection picture and, based on the hypothesis that the work from the National Gallery is a sketch for it, suggested a similar date for the present picture (Reiss 1975, 140). However, Chong has convincingly shown that the National Gallery painting could not have been a sketch for the painting in the Wallace Collection (Chong 1992, 360, 370).

MacLaren and Brown 1991; 1: 95, notes the considerable discrepancy in the handling of the brush and placed the present picture among Cuyp’s “early Van Goyenesque” works from the mid-1640s, partly based on a comparison with Dordrecht from the South, in a Storm (see cat. 12, fig. 1), which has been dated to the same period (for this picture, see Reiss 1975, 55, no. 274) Chong 1992, 309 - 310, no. 61). Chong, on the other hand, identified the “strong brushstrokes of the gray sky” as “typical of Cuyp’s work around 1650” (Chong 1992, 360).

3. See, for example, Beck 1973, nos. 294, 295, 299, 304, 305.

4. For an example by Jan Porcellis see Sailboats in a Breeze (signed and dated 1639, Stedelijk Museum De Lakenhal, Leiden, inv. no. 877; Minneapolis, Toledo, and Los Angeles 1990, 135 - 137, no. 24); for Van Goyen see Beck 1973, no. 798; for Abraham van Beyeren see Ships Sailing in a Strong Breeze (c. 1640 - 1650; private collection, Bahamas; Rotterdam and Berlin 1996, 248 - 249, no. 51); for Jacob van Ruisdael see Rough Sea (c. 1670, Museum of Fine Arts, Boston, inv. no. 57.41; Minneapolis, Toledo, and Los Angeles 1990, 138 - 140, no. 25); for Willem van de Velde the Younger, see the Kaag Close-Hauled in a Fresh Breeze (c. 1673, The Toledo Museum of Art, Ohio, inv. no. 77.612; Minneapolis, Toledo, and Los Angeles 1990, 169 - 171, no. 38).

5. Beck 1973, nos. 803, 804, 807, 811 and 833. For a much broader discussion of the subject of thunderstorms as a pictorial theme in Dutch art of the first half of the seventeenth century, and in particular as a subject within the oeuvre of Jan van Goyen, see Falkenburg 1997.

6. Van Mander and Miedama 1793, 1: chap. 8, fol. 35, 12 - 13. Also quoted by Falkenburg 1997, 143 - 144, in the context of his discussion of the panegyric debate as well as questions regarding the aemulatio of older artists. See also Angel 1642, 25 - 26, and Slijijfer 1993, 21. For a full discussion of this topic, see Wheelock’s entry for Dordrecht Harbor by Moonlight (cat. 12).

19

River Landscape with Cows

1648 - 1650, oil on panel, 68 × 90.2 (26 ¾ × 35 ½). National Gallery of Art, Washington, Gift of Family Petschek (Aussig) (1986.70.1)

A Herdsman with Five Cows by a River

c. 1650, oil on panel, 45.4 × 74 (17 ¾ × 29 ½). The National Gallery, London (823)

Inscription

Signed, lower right: A: c1935

Provenance

Probably De Nogaret; (probably sale, Lebrun, Paris, 2 June 1780, no. 12, to Vicomte Choiseul). Probably duc de Choiseul-Pralin; (probably sale, Pailet, Paris, 18 February 1793, no. 97, to Struber). John Smith; Joseph Barchard, 1823. (Charles J. Nieuwenhuys, Brussels); Sir Robert Peel, Br., by 1834; purchased by The National Gallery, London, 1871
Exhibitions
London 1822, no. 128; Norwich 1925, no. 6; Newcastle-upon-Tyne 1927

Literature

Endnotes
2. Reiss 1975, 124, no. 87, identified the painting as being in The Hermitage, Saint Petersburg. However, in Amsterdam, Boston, and Philadelphia 1987, 295, note 2, the owner is identified as Lord Samuel, England.
3. MacLaren 1960, 85; MacLaren and Brown 1991, 89; Reiss 1975, 125. Chong cited by way of comparison the brushwork in Equestrian Portrait of Pieter de Roovere (see Chong essay, fig. 3), which can be dated to before 1642 (Amsterdam, Boston, and Philadelphia 1987, 294; see also Chong 1992, 259 and 372 – 373, no. 132).
4. Chong 1992, 363: “It appears to be the earliest because it is slightly warmer in coloring, and includes more traditional elements such as the rowboat with fishermen and shows more of the river bank.”
5. Examples by Bloemaert might be his Expulsion of Hagar (signed and dated 1635, private collection), an engraving by Jan Saenredam after Bloemaert showing a Farmyard with the Prodigal Son, and his two animal series engraved by Adam Bolwerti and Frederick Bloemaert (Rotthilserberger and Bok 1991, nos. 51, 71, 135 – 148, 149 – 162). For Roelandt Savery see his Cows in a Meadow (1616, whereabouts unknown; see Spicer 1983, fig. 5); Stable Interior (Rijksmuseum, Amsterdam, inv. no. A221); and Jan Asselijn’s River Landscape (Gemäldegalerie der Akademie der Bildenden Künste, Vienna, inv. no. 810); River Landscape (Statens Museum for Kunst, Copenhagen); Shepherd and Cows with Ruins (Staatliche Kunstsammlungen, Gemäldegalerie Alte Meister, Dresden, inv. no. 1583; see Snelst Sief 1971, nos. 101, 151, 153).
6. See for example Porter’s Landscape with Cattle and Milkmaid (signed and dated 1646, private collection, England); Farmyard near The Hague (signed and dated 1647, collection of the duke of Westminster, Chester); and certainly The Farmyard, which was known in the seventeenth century as “The Pissing Cow” (signed and dated 1649, The Hermitage, Saint Petersburg, inv. no. 820; see also The Hague 1994, nos. 5, 9, 15).
7. See also Chong 1992, 180.

2.1 Cows in a River
c. 1650, oil on panel, 59 x 74 (23 ¼ x 29 ¼). Szépművészeti Múzeum, Budapest (408)

Inscription
Signed, lower left: A. cöyp

Provenance
John Barnard, by 1704, London; by descent to his nephew Thomas Hankey; (sale, Christie’s, London, 7 June 1799, no. 35, to Bryan). Sir Simon Clarke, Jr., and George Hibbert (sale, Christie’s, London, 14 May 1802, lot 63, to Charles Birch). Prince Miklós Estherházy zu Galántha, by 1810, Lasenburg and Vienna; collection bought by the Hungarian government in 1871

Exhibitions
Lugano 1985, no. 28, repro.; Amsterdam, Boston, and Philadelphia 1987, no. 21, repro.

Endnotes
1. Reiss 1975, pl. 63; Chong 1992, no. 50.
2. Spicer 1981, 254–254, figs. 5, 6. The painting of cows was sold at Christie's, London, 8 December 1967; the painting of bulls is in the Musée d'Art et d'Histoire, Geneva. Spicer stressed the importance of Savery for the early development of Dutch cattle painting.
3. For these various traditional meanings, see Chong 1988.

24
Travelers in a Hilly Countryside
c. 1650–1652, oil on panel, 48.1 × 74.8 (18 3/4 × 29 3/4"").
The Cleveland Museum of Art, Bequest of John L. Severance (1942.617)

Inscription
Signed, lower right: A. cuyp

Provenance
Johan van der Linden van Singeland, Dordrecht (sale, Dordrecht, 22 August 1785, no. 87, to Beekmans).
(Galerie Charles Brunner, Paris, 1912); [P.W. French and Co., New York, from 1917–1921, owned with M. Knoedler, New York]; John L. Severance, Cleveland; bequeathed to the Cleveland Museum of Art, 1936, transferred 1942

Exhibitions
Cleveland 1936, no. 214; Ann Arbor 1964, no. 29

Literature

Endnotes
1. Strangely, Gerson 1964, 347–348, used this of all paintings to remark that Cuyp's 'objects and his scenery are never really Italian.'
2. A landscape by Pynacker is called "Italiaansche" in the 1672 inventory of Franciscus de la Boë Silvius, Leiden; in 1674 a landscape by Berchem is similarly termed (Pieter Davidts, Leiden). See also Provenance Index database. Unattributed landscapes are termed "Italian" by 1657.
3. Houbraken 1718–1721 (1753 ed.), 3: 64, 108. Dujardin's style is contrasted by the "bruine wyze" (brown manner) of Jacob van der Does.
4. Estate of Matthys Helwigh van Alsorn (Gemeente Archief, Dordrecht, ONA 154); also "Alnoog een cleijn lantschap, op zijn Italiaens, met een breede leyse." I am grateful to John Loughman for this reference; see also Loughman 1993, 154. The term is used again in the 1707 inventory of Roeland Teerlink (Gemeente Archief, Dordrecht, ONA 574).
5. Sale, London, 6 November 1689 (lot 270), as by John Peters.

25
Landscape with Herdsmen
c. 1650–1652, oil on panel, 48 × 82.5 (18 3/4 × 32 1/2"").
The Corcoran Gallery of Art, Washington, William A. Clark Collection

Inscription
Lower right: A Cuyp.
Provenance

Exhibitions
London 1819, no. 57; London 1822, no. 136 or 138; London 1828, no. 83; London 1853, no. 71; New York 1959, 14, reprod.

Literature

Endnotes
1. Dattenberg 1967, no. 82, identifies the view as depicting Calcar, near Cleves, and Monterberg.
2. Reiss 1975, 218, addendum, expresses “lurking doubts” about the painting. Chong 1992, 374 – 375, accepts the attribution of the painting to Cuyp, but describes it as “Somewhat harder than other Cuyp works, the arrangement of the riders is also unusual.” He also notes that J.G. van Gelder and J. Jost state in their manuscript notes of 1777 that the painting was a replica.

27
Portrait of a Man with a Rifle
C. 1651, oil on panel, 80 x 68.5 (31 1/4 x 26 3/8). Rijksmuseum, Amsterdam (c 120).

Provenance
M.J. Alexander, London, by 1935; (sale, Sotheby’s, London, 18 December 1935, no. 188, to A. Asscher). L. van Santen, by 1936; (Galerie Sanct Lucas, Vienna); private collection, France, by 1938; by descent to current owner.

Exhibitions
Boston 1992, 142.

Literature
Rijksmuseum 1960, 79; Virch 1970, 6; Chong 1991, 617, fig. 55; Chong 1992, 336, no. 94.

28
The Maas at Dordrecht
Early 1650, oil on canvas, 114.9 x 170.2 (45 1/4 x 67). National Gallery of Art, Washington, Andrew W. Mellon Collection (1940.2.1).

Inscription
Right foreground (on sideboard of ship): A. cuyp.

Provenance
Johan van der Linden van Slingeland, Dordrecht, by 1753; (sale, Yver, Delfos, Dordrecht, 22 August 1785, no. 70). (Alexis Delahante, London, c. 1804 to 1814); Abraham Hume, Br. Wormley, Herefordshire; by inheritance to his grandson John Hume Cust, Viscount Alfred, M.P., Ashridge Park, Hertfordshire; by inheritance to his son, John William Spencer, 2d earl Brownlow, Ashridge Park; by inheritance to his brother, Adelbert Wellington, 3d earl Brownlow, P.C., G.C.V.O., Ashridge Park and London; (sale, Christie’s, London, 4 May 1923, no. 75); (Duveen Brothers, Inc., New York and London); The A. W. Mellon Educational and Charitable Trust, Pittsburgh, 1940; National Gallery of Art (Andrew Mellon Collection), Washington, 1940.

Endnotes
1. Chong 1991, 611, fig. 54.
2. Indeed, some of Cuyp’s portraits from these years are copies of Jacob’s works. See Chong 1991, 612.
3. For Bol, see Blankert 1982, particularly 99 – 100, nos. 22 and 23. For Leslie, see Amsterdam and Groningen 1983, 188 – 191, nos. 48 – 49.
4. Nevertheless, since their known provenances are entirely different, this exhibition will be the first opportunity to compare the two works side by side to confirm this hypothesis.
5. For a comprehensive discussion of this tradition, see Kettering 1983.
7. Quoted in Kettering 1983, 44.

26
Portrait of a Woman Aged Twenty-One, as a Hunter
1651, oil on panel, 80.5 x 68.5 (31 1/4 x 27 3/8). Private collection.

Inscription

London 1819, no. 67; London 1838, no. 37; London 1867, no. 21; Nottingham Castle 1878, no. 78; London 1892, no. 85; Detroit 1925, no. 3; Toronto 1926, no. 14; London 1928a, no. 124; London 1929, no. 267; Brussels 1935, no. 714; Amsterdam 1936, no. 37; Detroit 1939, no. 71; Liége 1939, no. 54; The Hague and San Francisco 1990–1991, no. 17.

Literature

Endnotes
1. This entry is based on Wheelock 1995, 36–43.
2. Waagen 1844, 2: 316.
3. In addition to its popularity in exhibitions, a number of copies of the work were executed. They include a signed copy (oil on panel, 59 x 74 cm) by Jacob van Strij (1756–1815), with Rob Kattenburg, Aardenhouz in 1883; a copy formerly in the collection of Matthew Anderson, exhibited in Leeds in 1868 (no. 898); and a copy (oil on canvas, 43 x 65 in.), formerly owned by Guy Sebright, exhibited at the Royal Academy in 1907 (no. 57).
4. Waagen wrongly believed that the scene was illuminated by a setting sun.
5. This drawing was made after 1647, when modifications were made to buildings along the water's edge. (Another drawing of the same site is in the Stichting P. and N. de Boer, Amsterdam. See cat. 83.)
6. Hoet 1752, 2: 490. Van Slingeland's inventory describes two paintings as "Two pictures showing the view of Dordrecht as far as the Hoois Merwede with many yachts and ships, showing a rendezvous of Prince Mauritius of Orange in a boat with several other princes being taken from the town to the yacht, opposite which boat is another with Oldenburg standing up and looking at Prince Mauritius. Painted from life, by Adellert Coup. Each picture high 43 din. wide 64 1/2 din." The first half of this description seems to refer to Coup's painting at Waddesdon Manor (fig. 1), while the second half of the description refers to The Maas at Dordrecht. As Oldenbarnewelt was executed in 1619 and as Prince Mauritius died in 1625, however, these identifications were clearly fanciful.
7. They are also unrelated to other princes of Orange — Frederick Hendrik (1584–1647) or Willem II (1626–1650) — with whom the scene might be associated. Only two references to records visits made to Dordrecht by Frederik Hendrik and his family. The first was in 1638 when they accompanied Marie de Medici on 20 September during her exile from France. The second was in 1643 when the prince of Orange and Amalia van Solms, accompanied by their son Willem II and his fourteen-year-old wife Mary, anchored for the night at Zwijndrecht, on the opposite side of the river Merwede from the city of Dordrecht.
9. Moreover, the elaborate account of Charles II's trip published in 1660 makes it clear that the royal fleet sailed past Dordrecht and only anchored beyond the city. Upon anchoring, the king first heard the dramatic news that he had been restored to the crown, news that quickly changed his plans to spend the night before proceeding to the city of Delft. As the message also indicated that an English fleet was off the coast of Holland ready to bring the royal couple back to London, they embarked immediately.
10. See, for example, Govaert Flinck's The Amsterdam Civic Guard Celebrating the Signing of the Peace of Münster, 1648 (Rijksmuseum, Amsterdam, inv. no. C1).
11. Russell 1990, 31–82. Russell's article is the outgrowth of research she undertook at the National Gallery of Art (NGA) in 1981–1982. Her article also incorporated a number of observations provided by Commodore C.J.W. van Waning, who undertook an in-depth study of the painting in the fall of 1982. The text of his research, as well as navigational charts he provided, are in NGA curatorial files.
13. According to Professor Paul Hofstéer (letter, 6 August 1986, in NGA curatorial files), the intent of the expedition was to lay siege to Antwerp. Antwerp, however, was heavily defended and by autumn the campaign had become bogged down.
14. As is characteristic of these ships, the wooded hull is broader along the waterline than at the deck level. This profile kept the ship high in the water and allowed it to sail along the shallow inland waterways. One of the sideboards used to stabilize the craft when it was under sail is seen drawn up midway along its side.
15. The distinctive flags on the ship — that hanging from the stern with blue-white-blue bars, the smaller orange flag atop the mast, and the small red flag atop the mast — may well provide a clue to the officer's identity. Unfortunately, despite the kind assistance of both T.N. Schelhase, M.A., director of the Centraal Bureau voor Genealogie, The Hague (letter, 5 March 1982, in NGA curatorial files), and H.C. 't Jong, archivist at the Gemeentelijke Archiefdienst, Dordrecht (letter, 10 March 1982, in NGA curatorial files), all efforts to identify these flags have been unsuccessful. One possibility is that the flags are related to Colonel Varik, the only officer mentioned by Balen. Although the exact identity of Colonel Varik is not known, one form of the Varik family
crest was a diagonal cross (color unknown) that in shape is not unrelated to the flag at the stern of the yacht. See Anspach 1892, 68–69, 149. Commodore Van Waning (see note 11) believed that the small orange flag represented a "banner or regimental colour with its finely carved top and wooden bar along the top side of the flag." He believed that the flag may well represent the regimental colours of Colonel Varik. Schel- lsaa, however, believes that the flag depicts a fleur-de-lis and thus may relate to the coat of arms of the De Beveren family.

16. De Beveren was also the head of a family that was one of Cuyp's important patrons. He is certainly not the relatively youthful officer standing in the small rowboat, since in 1646 he was fifty-six years old. Squiring the De Beveren on the city council were three treasurers, Jacob de Witt, Johann Dionisze, and Cornelius van Someren.

17. For the text of Van Slingeland's inventory, see note 6. For an assessment of the relationship between these two paintings, see Russell 1990, 34–35.

18. Reiss 1975, no. 106.

19. Ter Raat 1918, 41: 151.

20. Reiss 1975, no. 32.

29 Michiel and Cornelis Pompe van Meerdervoort with Their Tutor

C. 1652–1653, oil on canvas, 109.8 x 156.2 (43 1/4 x 61 1/4). The Metropolitan Museum of Art, New York, The Friedsam Collection, Bequest of Michael Friedsam (52.100.20)

Endnotes

2. Topographical details from his sketches of Cleves show that Cuyp must have seen the town between late 1651 and November 1652, when a tower was removed. See Gorissen 1964, 94, nos. 13, 14, 141; also Van Gelder and Jost 1973.

3. De Pluvinel 1623. Revised editions were published in Paris and Utrecht in 1625 under the title: L'Instruction du Ray or l'exercice de monter à cheval.

5. Bedaux 1990. Fransis 1989, 219, in an article devoted to the pedagogical associations of portraits of children with horses, specifically dismissed the educational allusions of this portrait. While the painting may not support an emblematic reading, the boys are depicted being tutored in riding and hunting.

30 The Baptism of the Eunuch

Inscription

Signed, lower right: A. cuyp fecit.

Provenance

(Sale, Paillet, Paris [probably the property of John Berrels], 27 March 1786, no. 3); (Lebrun, Paris). Widow Lebas-Courmant le jeune (sale, Paillet, Paris, 26 May 1795, no. 10). 1st duke of Buckingham and Chandos, Stowe, Buckingham-shire, 1834; to the 2d duke (sale, at house, Christie's, 15

Exhibitions
London 1866, no. 63; London 1929, no. 276; London 1952, no. 567; London 1976, no. 29; Dordrecht 1992, no. 19

Literature
Smith 1829 – 1842, 5 (1834): no. 36; Buckingham 1838, 72, no. 201; Waagen 1854, 4: 441; Hdg 1907 – 1927, 2 (1909): nos. 11, 12; Holmes 1930, 167, 185, no. 28; Reiss 1953, 46; Anson 1973, 595, fig. 38; Reiss 1975, no. 128; Edwards 1982, 227, 462; Loughman 1991a, 555, fig. 35; Chong 1992, no. 147, 389 – 390

Endnotes
1. Rembrandt: paintings of 1626 (Utrecht) and c. 1630 (lost). Lastman: paintings of 1608 (Berlin), c. 1655 (Lugt Collection, Paris), 1620 (Munich), and 1623 (Karlruhe).
3. Gemeente Archief, Dordrecht, inv. ONA 189: “Een groote schilderij vanden Moorman door Aelbrecht Cuyp” (A large painting of the Moor by Aelbrecht Cuyp) — written first as “Benjamin,” then crossed out and changed. The painting hung in the large upper room (“Groote boven carmen”). This painting may have been inherited from Roelof Francken’s sister Elisabeth, who owned an unattributed painting of the same subject; inventory of 1671 (ONA 153): “een landschap meten doop vande Moorman” (A landscape with the baptism of the Moor). Their father, Sebastian Francken, owned seven paintings by Cuyp in The Hague, 1656 (ONA 101), but they are not specifically described.

5. Pieternelle Palm (1674 Inventory: “Een van de Moorman”), who also owned four landscapes by Cuyp (ONA 365), and in estates of Gijsbrecht van Beaumont (1648), Jan Diemers (1650; he owned a portrait by Jacob Cuyp), Aeltgen Dirckszdr (1652), and Claerger Tack (1661). When it was inventoried in Amsterdam in 1710 (Provenance Index, inv. N-431), the estate of Jan Six and Margaretha Tulp, who were originally from Dordrecht, also contained an anonymous Baptism of the Eunuch.

31 Ubbingen Castle
mid-1650s, oil on panel, 32.1 × 54.5 (12 ¾ × 21¾). The National Gallery, London (824)

Provenance
Said to have been bought in Hoorn from an old clothes man for about 15 pence; D[e] P[reeul]; (sale, Lebrun, Paris, 25 November 1811, no. 69, to Lebrun). [apériantr]: (sale, Paris, 14 April 1817, no. 25, to Perignon), Varroc; (sale, Paris, 28 May 1821, no. 24, unsold); (sale, Phillips, London, 22 March 1822, no. 87); Sir Robert Peel, London; by descent to his son; The National Gallery, London, 1871

Exhibitions
London 1822, no. 38; Dordrecht 1992, no. 21

Literature

Endnotes
1. This and most of what follows on the history of the castle has been taken from Gorissen 1959, which appears to be the only publication to discuss the history of the building in any detail. For this as well as several other references I am enormously grateful to Ms. G. G. J. A. Bosman of the Gemeente Archief Nijmegen.
2. The map is kept in the Rijksarchief Gelderland, Arnhem, Rekenkamer, inv. no. 112. A detail showing the castle is illustrated in Gorissen 1959, pl. XXXII. See also Van Schewichaven 1898 – 1904, (1901): 23.
3. Gorissen 1959, 159, quotes a document stating that on 23 August 1582 “heeft die burgerie het huis Ubbingen den aovt in brant gestoken” (in the evening the citizens set fire to the Huis Ubbingen). Chong 1992, 205 – 206, based on Arkstée 1718, 203, suggests that the castle “was burnt by Spanish troops to forestall its use by troops of the United Provinces.”
4. By 1660 Klaas Vijgje (d. 1663) had added a baroque park to the property, a plan of which survives in the library of Leiden University (collection Bode Nynhuys; see Gorissen 1959, 159, note 8, and Schulte 1973). Another illustration of the ruins of the castle seen from the same direction but from a more elevated vantage point can be found in Arkstée 1718, following page 202 (“In den jare 1582 vertoonde zich het Huys van Slot te Ubbergen op dusdanige wyze, als het hier gezien word”).
5. One of the earliest depictions of Brederode castle may be the drawing by Hendrik Golrizius of c. 1600 in Amsterdam (Rijksprentenkabinet, inv. no. 1879-A67; see Reznicek 1961,

9. According to John Smith “this little picture, although simple in its composition, possesses every charm for which the master is so justly admired” (Smith 1829 – 1842, 5 (1834): 317, no. 181; quoted by H&G 1907 – 1927, 2 [1909]: no. 176). Roberts 1973, 135, found the painting lacking: “The little panel of Ubbergen Castle... is among the best of his small pictures; but it is only necessary to compare the passage of the rising ground on the left with the strictly comparable area of Claude’s Cephalus and Procris [signed and dated 1645, National Gallery, London, inv. no. 2] to see that Cuyp misses a whole dimension of atmospheric feeling. And he loses it because his actual observation of light is often inaccurate; Cuyp’s tone is invariably too yellow.”

10. See the essay by Alan Chong in this catalogue as well as Chong 1992, chapter 4 and 145–147.

**Literature**

Hoet 1752, 2: 496; Smith 1829 – 1842, 5 (1834): 292, no. 19; London 1851, no. 20; H&G 1907 – 1927, 2 (1909): no. 737; Reiss 1975, 150, no. 111; Chong 1992, 400 – 401, no. 155

**Endnotes**

2. Chong 1992, 197 – 198, quotes the notes of the Englishman Thomas Coryat, taken during his visit to Dordrecht in 1608, in which he mentions the effects of the flood on the Huis te Merwede. William Lord Fitzwilliam noted in his diary on 29 June 1663: “Ann 1421 was this town by an inundation separated from firm ground. There was at that time drowned seventy-two villages [sic], many gentlemen’s houses and above a hundred thousand men and women” (quoted in Van Strien 1998, 129).

4. Amsterdam, Boston, and Philadelphia 1987, 300, note 5. In the painting at the Musée Fabre in Montpellier (inv. no. 836-4-7) — whose attribution has been accepted by Chong with qualifications (Chong 1992, 139 – 130, no. 87) but which in the most recent catalogue of the museum has been attributed to a “follower of Cuyp” — the ruins are seen from a slightly different angle and overgrown with greenery (see Buelot 1998, 39 – 42, no. 11). Chong 1992, 401, lists eight other versions of the present picture, albeit “with significant differences in composition.”

6. The other two paintings are *Fishing under the Ice near Dordrecht* (fig. 2; Reiss 1975, 151, no. 112; Chong 1992, 402 – 403, no. 156) and *Landscape with Hunters and Dead Birds*, Gemäldegalerie, Staatliche Museen zu Berlin, inv. no. 8661K; see Bock 1996, fig. 1231).
7. Most closely related to the present picture is probably Jan van Goyen’s Winter Scene next to the Huis te Merwede with Dordrecht in the Background (signed and dated 1649, Musée du Louvre, Paris, PF.576; Beck 1973, no. 80), which shows a similar scene (including a refreshments stall) in front of the Huis te Merwede, albeit seen from the opposite direction. On this subject, see also Amsterdam, Boston, and Philadelphia 1987, 299; Chong 1992, 260, referred to these winter scenes as “Cuypp’s most innovative pictures.”

8. See a letter from the dealer William Dermer to Sir Richard Worsley on 25 April 1805, just before the latter acquired the picture (quoted in Chong 1992, 401). John Smith called it “a superlative production” (Smith 1829 – 1842, 5 [1834]: 292).

34 

The Valkhof at Nijmegen from the East

mid-1650s, oil on panel, 48.3 x 74 (19 x 29 1/2). Private collection

Provenance
Rev. J. Image, 1855; (John Smith, London); Richard Foster, Clewer Manor (sale, Christie’s, London, 3 June 1876, no. 3); Baron Alphonse de Rothschild, Paris to Edouard de Rothschild, Ferrières; by descent; private collection

Exhibitions
Paris 1946, no. 82

Literature
Waagen 1854, 4: 288; HdG 1907 – 1927, 2 (1909): nos. 274, 6672; Reiss 1975, no. 29; Amsterdam 1987, 297, fig. 4; Chong 1992, no. 153

Endnotes
2. The drawing is continued to lie on the verso of a sheet in Besançon (inv. D315). The boats are based generally on a drawing in Nijmegen (Dordrecht 1977, no. 72, repro.).

Burnett 1969, 379, stated that Cuypp was less concerned with topographical accuracy than Jan van Goyen or Salomon van Ruysdael, when in fact he was far more exacting.

4. Cuypp’s night scene in Cologne (cat. 12) is paired with a stormy landscape in the Bühle Collection, Zurich (see cat. 12, fig. 1); see also the 1674 inventory of Pieterella Palm “Een morgen stont door Cuypp / Een avant stont door Cuyp” (A sunrise by Cuypp / A sunset by Cuypp); ONA 365. See also Moiso-Diekamp 1987, 545 – 548.

6. See Kampinga 1917; Schöffer 1975.

8. Grotius 1610. The book appeared simultaneously in Latin and was reprinted twelve times in the seventeenth century. See the 1688 edition with an introduction by G.C. Mollevijk. For example, Grotius wrote that the Batavians rejected not only the Roman Empire, but also the centralized power of a monarch in favor of collective responsibility — a system not unlike the sharing of power between the Dutch provinces, cities, and stadtholder.

9. Grotius 1610, chapter 2. Similar ideas had been put forward by Hadrianus Junius, Kornelis van Haenrode, and Jan van Reygersbergh. See Kampinga 1917, 66; Chong 1992, 202 – 205.

10. Petrus Schreverius compiled an anthology of sources and interpretations of the Batavian story entitled, Batavia illustrata (Leiden, 1659), later revised as Beschrijvinghe van ouw Bataviën (Arnhem, 1612).
35

Dordrecht from the North

mid-1650s, oil on canvas, 68.5 × 190 cm (26 ⅛ × 74 ⅞ in.).
Ascott, The Anthony de Rothschild Collection
(The National Trust)

Provenance
(Sale, Sir George Colebrooke, Br., Christie’s, London, 22 April 1774, nos. 22, 23, to C. Barthall); Lady Stuart (c. 1757–1841), Scotland Yard, London; (sale, Christie’s, London, 15 May 1841, nos. 74, 75 to Thomas B. Brown; Brown rejoined the canvases); Robert Holford (1858–1902), Dorchester House, London; by descent to Sir George L. Holford; (sale Christie’s, 17 May 1928, no. 10, to Thomas Agnew & Sons, London) for Anthony de Rothschild, Ascott; National Trust bequest, 1949

Exhibitions
London 1815, nos. 133, 134; London 1843, no. 115; London 1852, no. 68; London 1862, no. 41; London 1887, no. 65; London 1900, no. 31; Paris 1921, no. 17; London 1929, no. 265; London 1936, no. 68; London 1947, no. 41; London 1971, no. 13; London 1976, no. 27; Dordrecht 1992, no. 22; London 1995b, no. 29

Literature

Endnotes
1. London 1995b, 84.

4. See also Abraham van Calraet, Scene on ice outside Dordrecht (The National Gallery, London, inv. no. 3024), which shows a similar view of Dordrecht, albeit during the winter and with slight variations (MacLaren and Brown 1991, 71).
5. Adam Willaerts, View of Dordrecht (Dordrechts Museum).
6. Also see the essay by Arthur Wheelock in this catalogue.
7. See also the large raft on the left of Adam Willaerts’ View of Dordrecht.

10. Because of the picture’s format and the fact that it does not bear a signature nor is anything known about a possible commission or an original owner, it has been suggested that Cuyp may have painted it “for his own pleasure and use” (London 1995b, 85). Although it seems certainly true that Cuyp was no longer dependent on the sale of his pictures after his marriage in 1658, it does not seem very likely that he would have painted such an ambitious work without having a particular patron in mind. Chong, based on a comparison with the lighter sky in the picture from Kenwood House (cat. 36), suggested that the picture may well have lost about a fourth of its original height, but there does not seem to be any technical evidence to support this hypothesis (Chong 1992, 416).

12. The picture had been cut in half by the time it appeared as two pendants in the sale of Sir George Colbrooke in 1774. Hofstede de Groot mentioned that “the portions were reunited by the London dealer Brown, 1841” (HdG 1907–1937, 2 [1909]: no. 164). More specifically, the work must have been done between the sale of the two pictures in the auction of Lady Stuart (Christie’s, London, 15 May 1841, nos. 74, 75) and the publication of Smith’s supplement of his Catalogue raisonné in 1842 (no. 52; see Van Gelder and Jost 1972, 236, note 5). Evidently, the severing and rejoining were handled in such a manner that “virtually nothing has been lost from the centre of it” (London 1995b, 85). However, another author found the “excessively bright and hard-edged sky” “unlike anything Cuyp ever painted”—although parallels have been perceived in the sky of The Baptism of the Eunuch from Anglesley Abbey (cat. 30) (Chong 1992, 416). Reiss (1975, 137) compared this with the two fragments of a View of Dordrecht, now kept in Los Angeles (left half, Los Angeles County Museum of Art, inv. no. 50.43) and Leipzig (right half, Museum der Bildenden Künste, inv. no. 1001) (Chong 1992, 286–287, nos. 30, 31).

36

Dordrecht from the North

mid-1650s, oil on canvas, 97.8 × 137.8 cm (38 ½ × 54 ¼ in).

Endnotes
1. For the identification of the individual buildings see Dordrecht 1977, 88.
3. See also the entry on the painting from Ascott (cat. 35); Dordrecht 1992, 34 – 35, fig. 1; and Chong 1992, 171.
5. The drawing from Amsterdam also served as a model for Cuyp’s Maat at Dordrecht in Washington (cat. 28). Both Reiss and Chong — evidently considering the present picture somewhat inferior to the Ascott version — suggested that the present work must have been painted slightly later (Reiss 1975, 136; Chong 1992, 416).

37
Horsemens Resting in a Landscape
late 1650s, oil on canvas, 116 × 168 (45 1/4 × 66 1/4);

Literature

Endnotes
1. Houbraken listed some of Cuyp’s favorite subjects, including the riding school: “de Piquebaan, daar by dan de schilderagtigste Paarden die daar gewoonlyk kwamen, in te pas bragt, zoo dat men dezelve kost onderkennen” (the riding school, in which he depicted the most picturesque horses that usually came there, so that one could recognize them); see Houbraken 1718–1721 (1753 ed.), 1: 248–249.
2. The horse in Cuyp’s painting has not accurately performed the levade: its front legs are too extended.
4. An earlier edition of the treatise is De Pluvinael 1633.
6. In 1640 Van de Passe moved to Amsterdam.
7. This point is made by William Hurton in Hurton 1995, 97.
8. See Hurton 1961, 84, who notes that the church’s tower, cupola, and façade resemble those of the Mariakerk. Hurton, however, also adds that “Cuyp has flattened the roof, suppressed later Gothic elements and raised the arcing. He then added a half-round apse like the one still in the Valkhof at Nijmegen.” See Boymans-van Beuningen 1972, 51, repro., for a painting by Pieter Saenredam (1597–1665) of the Mariakerk, signed and dated 1663.
9. See the essay by Gordenker for a discussion of the date and style of the outfits worn by the horsemen in riding coats.
10. Inventories of country houses near Utrecht indicate that many collectors preferred paintings by artists working in an Italianate mode, among them Herman Saftleven, Cornelis van Poelenburgh, and Jan Both. Poelenburgh’s influence is stressed by Chong 1992, 148. For inventories of Utrecht collections, see Olde Meierink and Bakker 1997, 72–85.

12. The Toledo picture and its pendant were listed in the 1652 inventory of the Van Slingeland collection. This work followed directly after the Washington picture in the 1785 Slingeland sale, where it was described as “een Meesterstuk van konst en een weerga van de vorige” (a masterpiece of art and a pendant of the previous [work]).

40 Lady and Gentleman on Horseback

begun c. 1655, completed 1660 / 1665, oil on canvas, 123 × 172 (48 ½ × 67 ¾). National Gallery of Art, Washington, Widener Collection (1942.0.45)

Inscription
Lower left: A. Guijn

Provenance

Literature

Endnotes
1. I would like to thank Ann P. Wagner, a graduate student at the University of Maryland, for informing me about the character of these hounds. For further information, see Anthony Dent, Horses in Shakespeare’s England (London, 1987), 128.

2. Reiss 1975, 165, proposed that the gentleman was “a member of the Pompe [van Meerendorp] family; perhaps Cornelis Pompe (1639 – 1680), the younger of the two boys seen in the New York picture” (cat. 29), but this conclusion rests on the assumption that the star-shaped horse-brass in the Washington picture, which resembles that in the New York picture, relates to the family crest. On the other hand, in a letter dated 25 February 1984 (NGA curatorial files), Alan Chong noted that the horse-brass in the National Gallery’s picture is similar to the stylized five-pointed oak-leaf that appears in the Berk family crest. In fact, according to the archivist of the Municipal Archives in Dordrecht, these horse-brasses were standard decorative elements of Turkish origin and cannot be connected with family crests. Indeed, exactly the same motifs occur on the horse-brass on Paulus Potter’s 1653 life-size equestrian portrait of Dirck Tulp, in the Six Collection, Amsterdam. The suggestion has also been made in a number of the Widener catalogues that the woman, because of her younger appearance, may be the man’s daughter.

3. The painting is in the Zeeuws Genootschap van Kunst en Wetenschap, Middelburg. Alan Chong kindly provided this information in a letter, 5 February 1990 (NGA curatorial files).

4. However, this identification does not explain the two letters, JH, embroidered on the woman’s saddlecloth. These initials have not yet been connected with any name.

5. The red socks can be seen through the somewhat translucent surface paint.

6. Another connection is the architecture of the building; though not identical, it is similar in character to that in the Washington painting. This structure is probably a fanciful evocation of an ancient fortified chateau such as Cuyp may have seen on his trip along the Rhine.

7. De Jongh 1968 – 1969, 34, wrote: “The hunt is synonomous with the game of love and it… was a current and naturally obvious metaphor.”

8. Although the symbol of the burdock leaf can be either that of virtue and fidelity or vice and lust, the context of the scene clearly points toward the first alternative. See Parsons and Ramsay 1983.

2. This point was made by Walsh and Schneider in Los Angeles, Boston, and New York 1981, 43. These authors noted that the painting’s biblical subject was not identified until the 1929 Detroit exhibition catalogue.
3. This comparison was made in Montreal 1990, 87.
4. Walsh and Schneider in Los Angeles, Boston, and New York 1981, 45, dated the painting in the “early to middle 1650s.”

4.2 River Landscape with Two Horsemen
late 1650s, oil on canvas, 128 x 227.5 (50 ¼ x 89 ¾ %).
Rijksmuseum, Amsterdam (A 418)

Inscription
Signed, lower center: A. cuyp.

Provenance
Jacob Odon; (sale, Van de Sley, Yver, Amsterdam, 6 September 1784, no. 51, to Coecler); (Noel Desenfans); John Joseph Martin, Ham Court, about 1796; G. E. Martin; Alfred de Rothschild, Halton; Lionel de Rothschild, Exbury, Hampshire, 1920; by descent to Edmund de Rothschild; (Thomas Agnew & Sons, London, and Rudolf Heinemann by 1957); acquired by the Rijksmuseum, Amsterdam, with the aid of the Vereniging Rembrandt, the Prins Bernhard Fonds, and the Commissie voor Fotoverkoop, 1965

Exhibitions
London 1850, no. 20; London 1862, no. 34; London 1880, no. 114; London 1938, no. 127; London 1953, no. 170; London 1957, no. 19; Dordrecht 1977, no. 34; Amsterdam 2000a, no. 151

Literature
Smith 1829-1842, supplement (1842), 659-660, no. 35; Burnett 1969, 377-379, fig. 16; Reiss 1975, 182, no. 139; Chong 1992, 423-424, no. 169

Endnotes
2. Quoted from Chong’s conclusion in his essay in this catalogue.

3. A few more works left the country over the course of the nineteenth century; for instance, Ships on a River and A Landing Party on the Maas at Dordrecht, both now at Waddesdon Manor (see cat. 28, fig. 1; Chong 1992, nos. 159, 160).

4. De Bruyn Kops 1664, 162-176. Uniforms had not been introduced yet and soldiers recognized friend and foe by the colors of their sashes and feathers. The light armor suggests that the soldier is a harquebusier.

7. Chong 1992, 424, and De Bruyn Kops 1665, 165, have argued that the topographical fidelity of the drawing suggests that it was actually made from nature and not sometime after the journey in the studio, as Burnett implied. (Burnett 1969, 328). However, Cuyp may have added the range of hills in the back sometime later. Presumably without knowing the drawing, John Smith in his Catalogue raisonné had already identified the location as “on the banks of the Rhine, and apparently in the vicinity of Nijmegen.” Smith 1839-1842, supplement (1842), 659. Another drawing of the same scene, although with different staffage, identified by Chong as a copy, is kept in the Städelisches Kunstinstitut in Frankfurt (inv. no. 3721).

8. This is discussed in more detail in Maisak 1891, 188-192. Already in 1769 the description accompanying William Elliott’s print after Cuyp’s River Landscape with Horseman and Peasants (then in the earl of Bute’s collection), remarks, if somewhat critically, on this aspect (see Chong essay, fig. 7 and note 7 in cat. 45).

1. In this context it is interesting to note, as Chong has pointed out, that Cuyp is actually never referred to as a “painter” in contemporary documents (see Chong 1992, 225). Cuyp’s marriage to Cornelia Boschman, the widow of the wealthy Dordrecht regent Johan van den Corput, left him financially secure and admitted him to the city’s regent class. He may have reduced his activities as a painter in order to pursue the responsibilities and lifestyle (alluded to so often in his grand landscapes) that his new social position demanded. However, it seems unlikely that he gave up painting altogether, for evidence suggests that he reworked one of his earlier pictures (cat. 40) in the early-to-mid 1660s, and Houbraken reported that Barent van Calraet became apprenticed to Cuyp about 1665 (Houbraken 1718–1721 (1753 ed.): 230).
2. This is a recurring motif in Cuyp’s paintings. For more on the subject see also cat. 45.

3. A variant of this composition, painted by a follower of Cuyp, is now kept at Petworth House (National Trust) (Reiss 1975, 190, no. 145; Chong 1992, 451, no. C16).

4. See, for example, his etching of Travellers in a Landscape (Amsterdam, Boston, and Philadelphia 1987, 198, fig. 2). A comparable composition can also be found in Cuyp’s Three Horsemen, Herdsmen, and Shepherds (British private collection; Reiss 1975, 177, no. 134). Less convincingly Reiss 1975, 176, suggested that the painting also reflects the influence of Adam Pynacker’s compositions, for example his Bridge in an Italian Landscape (Dulwich Picture Gallery [inv. no. 183]).

5. Waagen 1838, 21371.

Endnotes
1. Although Cuyp may have reduced his activities as a painter because of his new position and responsibilities in the wake of his marriage of 1658, Reiss suggested that the present picture “is so perfectly wrought that it is almost understandable he should have felt inhibited from proceeding further” (Reiss 1975, 183).

In this context it may be worth noting that the motif of asking for directions occurs in a poem, entitled “Van den Weg” (“About the Way”), published in Haarlem in 1650 as part of the Nederduytschen helcon. The subject of the poem is man’s journey through life — contrasting a world full of dangers and corruption as symbolized by the woods with fertile lands that promise a joyful and virtuous life. But in order to stay on the proper path — and thus the reader reminded twice at the end of the poem — it is necessary to “ask for the way” (Vraeght naer de weg) (see Helicon 1610, “Van den Wegh,” 230–233, fols. 38v–39r). However intentional this parallel may have been, it is not inconceivable that some of Cuyp’s more educated and well-read patrons would have noticed it. I would like to thank Anna Tummers, who drew my attention to this source.

5. See Farington’s diary (1798–1834, 15 [1844], 5205): “While looking at Lord Bute’s picture by Cuyp, He [Benjamin West] said that picture was brought to England by the late Capen. Baillie, and was the first picture by that Master known in England. Having been seen, pictures by Cuyp were eagerly sought for & many were introduced & sold to advantage!”

7. The passage reads as follows: “Cuyp may, with great propriety, be styled the Dutch Claude. It must be confessed, that this scenery is not so fine a goitr as that great master’s, nor had he any idea of embellishing his pictures by the introduction of poetical subjects; but the chief design of both was to represent the beautiful effects of the sun upon terrestrial objects in different parts of the day … nor is the colouring of Cuyp any way inferior to that of Claude in producing those effects. In some respects, he was certainly superior to him, particularly in designing and painting cattle, and the representation of the effect of moon-light, which, perhaps, Claude never attempted.” (Boydell 1769, 2:1). In 1837 Gustav Waagen in his account of the paintings by Cuyp he had
seen in the National Gallery also used the comparison with Claude: “In greatness of design, knowledge of aeral perspective, combined with the greatest glow and warmth of the misty or serene atmosphere, Cuyp stands unrivalled, and takes the same place for Dutch scenery as Claude Lorrain for the Italian, so that he might justly be called the Dutch Claude.” (Waagen 1838, 1, 227–228). For a more detailed discussion of this aspect see Chong 1992, 32–34. John Ruskin, on the other hand, held a generally dismissive attitude toward the artist’s paintings: “A brewer by trade, he [Cuyp] feels the quiet of a summer afternoon, and his work will make you marvellously drowsy. It is good for nothing else I know of; strong, but unhelpful and unhthoughtful. Nothing happens except some indifferent persons asking the way of somebody else, who, by the cast of counterance, seems not likely to know it.” (Ruskin 1843, 5: part 9, chapter 6, paragraph 12; Ruskin 1903–1912, 7, [1903] 333–334; Ruskin 1987, 562; partially also cited by Gibson 2000, 153.)

9. In 1770 Boydell exhibited the drawings for the prints he had published a year earlier. They were sold at Christie’s on 22 April 1771, yet the drawing for the present painting is missing (Chong 1992, 427).
Aelbert Cuyp, as a draftsman, primarily a landscape artist, turned his hand at the beginning of his career to the portrayal of the Utrecht Mariakerk, evidently in order to discover his abilities as a topographical artist. However, one may hardly speak of Cuyp’s view of the Mariakerk without taking into consideration Pieter Saenredam’s drawing of the same church on 12 July 1636 (fig. 1). In conception they are so similar that Cuyp must have known this drawing or a comparable one by this artist. While Saenredam observed the choir of the church from the first floor at 10 Mariaplaats, Cuyp sketched the church from the street somewhat farther to the right. Cuyp made his drawing a few years later, quite possibly in 1639, and a few differences suggest this passage of time. The pentice for the fire ladders has vanished, as has one of the two millstones set against the wall. The tall chimney of the chapter’s office, the annex with the stepped gable, has also disappeared. Cuyp drew in a more general fashion and was less concerned with details than was Saenredam, as, for instance, in the buttresses on the north side of the choir, which the older artist drew with great sensitivity. Cuyp evidently had less trouble with the perspectival scheme: Saenredam “forgot” to indicate that he saw the tower staircase from below, while Cuyp exaggerated it perhaps just a fraction. Moreover, Cuyp devoted greater attention to elements he deemed important, making, for example, the square and circular windows of the transept powerful visual accents, whereas Saenredam almost allowed them to vanish in the myriad of details. This difference in approach is also clear in the distinction between the wooden sheds and the stone wall with the little gate giving onto the inner court of the chapter’s office, elements that are almost inconspicuous in Saenredam’s work. Similarly, Saenredam precisely delineated the painted board above the door to the salesroom of the cabinetmakers’ guild, while for Cuyp this architectural element served as a brief yet powerful demonstration of the spatial effects of perspective. The different approach to proportions is also evident in the eastern window (at the left in the drawing). Although both artists depicted the division of the window below the crowning with tracery in two rows of five apertures each, the proportions of the window as a whole are substantially different.

Cuyp depicted the Gothic choir — consecrated in 1421 — and the Romanesque transept of the Mariakerk, which was founded in the eleventh century. The somewhat lower nave and the south tower of the west side are hidden from sight. He also depicted the overgrown ruin of the north tower. The explicit topographical tenor of this drawing is unique in Cuyp’s oeuvre. Cuyp undoubtedly drew this work, along with a few other landscape-oriented views of the city (cats. 47–49), during a visit he made to Utrecht early in his career.
The Mariakerk in Utrecht from the Northwest

black chalk, gray wash, watercolored in green, yellow, and brown, heightened with white, yellow, and pink, partly brushed with gum arabic, 19.1 x 30.7 (7 1/2 x 12 1/2). Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main (Washington, Amsterdam only)

Probably the choristers’ house. This structure, built as a school for choirboys, served as a hidden church for the Catholic congregation of Saint Geerte or Gertrudis in the seventeenth century.

The artist probably drew the building from the city ramparts, presumably the site of the peculiar architectural fragment in the left foreground. On the right side, however, Cuyp abandoned any pretense of topographical accuracy, for neither the water (and, thus, the rowboat) nor the dunes in the distance were visible from this location. One can therefore infer that once back in Dordrecht, Cuyp gave the finishing touches to the drawing, not only accentuating the landscape but also introducing the shadows suggesting that the sun was in the northeast.

The drawing belongs to a group of views of Utrecht that Cuyp made early in his career (cats. 46, 48, 49). On this occasion Cuyp must also have drawn the ambitious profile of Utrecht from the southwest (fig. 1), in which the Dom Tower, the Mariakerk, and the Buurkerk can be distinguished at the left. A comparison between that sheet and far more advanced city views of just a few years later, for example, the view of Amersfoort (cat. 71), makes clear just how great the artist’s progress would be.

The rural surroundings Cuyp provided in this drawing play an even greater role in the painting in Salzburg (cat. 5), for which Cuyp used this drawing as well as the Landscape with Two Groups of Trees, formerly in Pella (see cat. 5, fig. 1). There the setting of the church — as if on a ridge in the distance — is completely divorced from any urban connection. WK

1 Aelbert Cuyp, View of Utrecht from the Southwest, Staatliche Museen zu Berlin, Kupferstichkabinett
black chalk, gray wash, watercolored in gray-green, white, and gray-green bodycolor, pen and brown ink, partly brushed with gum arabic, 18.4 x 30.5 (7 1/4 x 12). Mrs. Edward Speelman

- At the left in this sheet Cuyp depicted the Utrecht Buurkerk — the city’s first parish church — with its characteristic truncated tower in two sections, surrounded by a great variety of structures. In the middle can be discerned some towers on the city ramparts, while a few mills dot the southwest bulwark of the city. Cuyp, who observed the church from the northwest, created the impression that he drew the tower from the city ramparts. However, in actuality, the Mariakerk would also have been visible from this angle.

Cuyp probably first laid in the composition in chalk and enlivened it with subtle colors back in the workshop. The chalk sketch presumably originated during an early visit to Utrecht, at which time he made the views of the Mariakerk and the Pellekussenpoort (cats. 46, 47, 49). From the city ramparts he also drew the German chapel with the Mariakerk in the distant background.¹
Utrecht with the Vecht River and the Pellekussenpoort

This early drawing is exceptionally rich, both in technique and in topographical detail. Visible at the left is the profile of Utrecht with the Pellekussenpoort (Pellekussen Gate), the Dom Tower, and in the distance the Sint Jacobskerk. On the opposite side of the Vecht River are the characteristic low-rise buildings of the suburban section of the city and a badly maintained quay. This sheet also depicts numerous moored boats in the bend of the Vecht, as well as a boat, sculled across the water, carrying two women with goods. At the right is a sailboat at anchor with a struck mast, and at the left is a fishing boat with large catch baskets.

Cuyp used many techniques when creating this drawing. First he drew the sketch in black chalk, sometimes heavily accentuated (as in the quay at the right), sometimes with a lively touch (as in the foliage), or with extreme delicacy (as in the mill in the distance). Drawing with the tip of the brush in gray ink, he subtly defined the little figures in the boats and elsewhere. He subsequently applied gray washes for the shadows and the reflections in the water. Over the wash he introduced green watercolor and, finally, some white and red accents in the houses at the right and the roof of the gate. He also reinforced a few passages with the pen, for instance in the boats in the foreground. Initially indicated in chalk, the clouds are also rendered with gray washes that give the impression of being autograph.

The sheet belongs to the group of early drawings of topographical significance that Cuyp made in and around Utrecht shortly before 1640 (see cats. 46–48). Related to a painting of 1639, now in Strasbourg, this drawing affords a *datum ante quem* for this group.

Cuyp’s depiction of the Pellekussenpoort — a structure that inspired many artists in the seventeenth century — is remarkably accurate. Here, Cuyp has proven that his interest in topographical reality in the drawing stage was not yet hampered by a preference for the picturesque, as is evident in other drawings from this period (cat. 48) and in his use of drawings for paintings (see cat. 5).
Four Trees near a Fence

black chalk, gray wash, watercolored in brown and green, partly brushed with gum arabic, 18.8 x 30.8 (7 1/8 x 12 1/8). The Metropolitan Museum of Art, New York, Rogers Fund, 1907

(Washington, Amsterdam only)

- Cuyp almost certainly produced a number of landscape studies during his visit to Utrecht in the late 1630s. Stylistically very close to his Utrecht views (cats. 46 - 49) are the present sheet and the famous Landscape with Two Groups of Trees, formerly in Pella (see cat. 5, fig. 1). The artist would have encountered such uneven terrain to the east of Utrecht, perhaps along a route that took him to Rhenen; see Cuyp’s stylistically related View of Rhenen in the Teylers Museum in Haarlem (Haverkamp-Begemann essay, fig. 3).

While in the Landscape with Two Groups of Trees Cuyp placed emphasis on a few old oak trunks and the human presence (two travelers near a fence pointing to the distant vista), in Four Trees near a Fence Cuyp offered a more complex conception of the landscape. The four trees on a rise at the left and the fence across the foreground path constitute a visual screen obstructing the view into the middle ground. Nevertheless, the groves at the right appear to be at the edge of a valley that extends between the foreground elevation and the distant woods.

Technically, Cuyp worked hard on this sheet. In his engaging, crabbed manner of drawing, Cuyp portrayed the fancifulness of the four trees, as well as their transparency. He brought the sheet to life with tiny strokes of watercolor, suggesting the lush overgrowth in the foreground at the right with green and brown. Unfortunately, the drawing is somewhat damaged near the fence and this area has become blurred. WR
The Edge of a Woods with Travelers
black chalk, gray wash, 18.6 x 30 (7 3/8 x 11 13/16). Museum Boijmans Van Beuningen, Rotterdam
(Amsterdam only)

- In this sheet Cuyp rendered the hilly countryside at the edge of a woods. The landscape is intersected by a few paths, perhaps with a three-forked road at the left. Two travelers, whose upper bodies extend just above a rise in the landscape, have obviously selected the farthest path. They are fully integrated into the landscape and serve primarily to indicate depth. Cuyp made good use of the parallelism of the three elevations rising to the right.

Here, Cuyp wonderfully sustained his fine and lively technique, which found especially beautiful expression in the branches and foliage. This effect is particularly evident in the passage between the swaying grasses in the foreground and the bush at the foot of the tree to the right of center — an unclear bit of land that the artist nevertheless generously elaborated. Clouds in the sky are also nicely detailed with delicate, black-chalk hatching and a light wash.

This drawing belongs to a group of landscape drawings with groves (see also cat. 50). Cuyp must have developed at a rapid pace, and in this sheet, the drawing in Frankfurt (cat. 52), and the highly comparable drawings in Dublin and Saint Petersburg (The Hermitage), he presented a greater refinement, recalling the etchings of Willem Buytewech.1
black chalk, gray wash, brushed with gum arabic, 17.7 × 29.5 (6 ⅞ × 11 ¼). Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main (Washington, Amsterdam only)

Although this drawing is consistently called a path through a woods, this description is precluded by the limited number of trees here drawn. To the left of the path in the middle are about six to eight trees, one of which upon closer scrutiny turns out to consist solely of a heavy old trunk without branches or foliage. At the right several trees are clustered behind an old oak, under whose foliage a few more trunks can be observed; hence the scene is actually nothing more than a grove.

Visible in the distance is the roof of a house. Although the drawing contains no detail of any significance, Cuyp appears to have chosen a vantage point that emphatically invites the viewer to pass by this group of trees and see what the distance has to offer. Cuyp isolated the oak tree at the right and used it in his painting in Melbourne.¹

The drawing is characteristic of a group of woods and tree studies that Cuyp must have made about 1640, which also includes the drawing in Rotterdam (cat. 51). These sheets correspond with the wooded views that Cuyp made in the vicinity of Utrecht, yet display greater refinement, both in their composition and finish. While he often accentuated the earlier works with a touch of color and white highlights, he limited himself here to black chalk and brush in gray. WK
A Path at the Edge of a Woods with Two Old Oak Trees

black chalk, gray wash, watercolored in yellow, partly brushed with gum arabic, 13.8 x 19.3 (5 ⅞ x 7 ¾).
The British Museum, London (London only)

Aelbert Cuyp deftly elaborated the tension between breadth and depth in this sheet. The viewer's eye is drawn from the old oak tree in the left foreground to the one at the far right and in the process, discerns the path leading from the right foreground to the edge of the woods screening off the horizon. Cuyp's skillful handling of coulisses, so evident in many of his paintings, is here superbly evident in the dark foreground with its suggestive pattern of curving, partly consonant lines that virtually mirror those at the woods' edge. He cleverly alternated one of these gently undulating lines with short zigzag strokes to indicate low cover. The fanciful old tree branches contrast with the lush, young, fresh, green foliage.

Cuyp's use of black chalk is seen to good advantage in this sheet. He executed the initial phase with a light sketch and subsequently reworked the drawing with a much deeper black chalk. The intensity of the color in the foreground and the left oak was fixed permanently by means of a gum arabic varnish locally applied with the brush.

This drawing, which is related to the sheets formerly in Pella (see cat. 5, fig. 1) and the Metropolitan Museum of Art (cat. 50), but which is smaller and displays less hesitation, must have originated in the early 1640s. wk
In this sheet, the draftsman looked out over a very broad expanse of water from a relatively high vantage point. A path leads to what must be two dwellings (the artist could see little more than the roofs) just near the water’s edge. The elevation is not a dike: the group of trees at the right indicates a naturally uneven terrain. The body of water is also not a river, for the land on the opposite side, vanishing in the far distance, and the two little boats in the middle of the drawing attest to its enormous width. Where in the Netherlands Cuyp could have come across such a combination of hills or dunes, woods, and such a wide stretch of water is not clear.

Most likely dating to about 1640, this drawing is one of the earliest testimonies of Cuyp’s interest in panoramic views. As such, the panorama has been connected with early paintings by the master with distant views from an elevation, such as his depiction of Orpheus and the animals (cat. 1) and the river landscape with a shepherd and flock from 1639; both, however, show imaginary scenes. While in these two works Cuyp allotted only limited space to the distant view, in this sheet—albeit summarily indicated—he gave it the necessary latitude.
black chalk, gray wash, some graphite, heightened with white and yellow, partly brushed with gum arabic, 15.3 × 19.6 (6 × 7 ⅞). Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main  
(Washington, Amsterdam only)

Here, Aelbert Cuyp focused upon a single, weather-beaten oak tree as the primary subject of his drawing. Undoubtedly once struck by lightning, the old trunk survives as little more than a substantial stump. One branch, however, is flourishing and extends out from the middle left to the upper right corner of the drawing. At the left a path is barred by a rickety fence. The landscape opens up on a woods in the left background, in which a few cows stand before a half-hidden dwelling. At the right, a steeple can be seen in the distance between this woods and some trees. The artist indicated the middle ground summarily: only with some effort can a stretch of water with a rowboat be distinguished. Even though largely obscured by a tree, the overcast sky is suggested with wash.

Cuyp probably derived the motif of a windswept old oak from Jan van Goyen, whose famous Landscape with Two Oaks in the Rijksmuseum dates from 1641, though his fascination with this subject began in the 1630s. While Van Goyen was inspired by the picturesque possibilities of such old trees, Cuyp, fascinated by the tree’s actual appearance, was apparently struck by the contrast between the knotted old trunk and the young foliage fanning out. Aelbert Cuyp addressed the theme of old oak trees in a number of other drawings (see also cat. 53).
Three Trees in Hilly Terrain

black chalk, gray wash, watercolored in yellow-green, 18.1 × 14.6 (7 ⅝ × 5 ¾).
Staatliche Museen zu Berlin, Kupferstichkabinett (Amsterdam only)

- In this sheet, Cuyp paid only cursory attention to the landscape, concentrating instead on the fluttering effect of the foliage. It has become a true “portrait” of a group of trees. At the right two trees bend heavily to the left, largely hiding from sight a third tree — which seems to be propping them up. The widely extending branches with young green foliage fill the largest portion of the sheet. Still, the contrast between the green-yellow dunes on which the trees stand and the gray landscape in the distance effectively suggests great depth. The group of trees gives the impression of having been drawn from life, a captivating motif noticed by the artist and portrayed without much ceremony.

The drawing must have been cropped at the left; thus, the spatial freedom of the trees has been somewhat diminished. WK
In this sheet Cuyp opted for a surprising dichotomy in the landscape: a panoramic view is separated from a formless terrain, possibly the foot of a hill, by a screen of low growth. A large part of this grove appears to border the river that leads the eye from the left, past a group of trees, and into the distance. A spire and a mill punctuate the horizon at the left, while to the right of center is a sturdy village church. Small ball-like pollard willows in the distance at the left anticipate the characteristic detailing of the flats that Cuyp would use in his Nijmegen series (cats. 91–93).

In technical terms, Cuyp also elaborated the layers of this drawing differently. Despite a certain shapelessness, the foreground is highly varied with nervous strokes in brush and watercolor in a multitude of light yellow, ochre, and gray shades. Cuyp articulated the groves with many delicate strokes from the tip of his brush and darkened the tree at the left, casting its shadow on the ground, with moistened black chalk—a 7½ × 12 ⅞)

Despite a certain shapelessness, the foreground is highly varied with nervous strokes in brush and watercolor in a multitude of light yellow, ochre, and gray shades. Cuyp articulated the groves with many delicate strokes from the tip of his brush and darkened the tree at the left, casting its shadow on the ground, with moistened black chalk—a 7½ × 12 ⅞. Cuyp preserved with some gum arabic. In contrast, the panorama is airy and wide, finely and somewhat vaguely sketched. Wk
Panorama with a Country Manor

black chalk, gray wash, watercolored in ochre, yellow, and blue, partially brushed with gum arabic, 18.7 x 30.3 (7 7/16 x 11 11/16). Graphische Sammlung Albertina, Vienna (London, Amsterdam only)

The artist drew what appears to be the Elterberg, rising beyond a country manor located in the Rhine valley. To the right of center and farther to the right are two churches. In this landscape Cuyp brilliantly indicated the charm of a watery lowland nestled between wooded hills, an effect enhanced by the “rhyme” of the subtle reflections of the manor (as yet unidentified) and the faraway church.

The format of this sheet, which is similar to the London panorama (cat. 57), suggests that Cuyp made this drawing during a trip to the Cleves region in about 1640–1642. Cuyp could well have taken along both a sketchbook with very wide sheets (for example, cat. 76), and a more modest album the size of this drawing.

A faithful, eighteenth-century copy of this sheet, in which Cuyp’s somewhat later drawing style is aptly imitated, is in Frankfurt.¹ wk
In this masterful sheet Aelbert Cuyp conceived a broad composition of stunning balance as well as great drama. The powerful effect of light and dark is shown to best advantage in the left foreground and at the right near the tall group of trees. Also exceptional is the way in which the manor, with a pitched roof, chimney, and a single, summarily indicated window, seems to loom up from the trees. Cuyp cleverly used the large tree at the right to emphasize the variety of the afforestation. The strong diagonal of the hill rising up in the background is subtly reiterated by the group of trees advancing in the foreground at the right. The effect of the group of trees at the right projecting just above the diagonal line of the hill is particularly successful. Cuyp varied and further enriched this theme in his magisterial late composition in London (cat. 45).

Using a noticeable subordination of the topographical motif, Cuyp increased the degree of refinement in this drawing to better render the wooded landscape; in its proportions the sheet approximates the sweeping panoramas in which as a rule a city occupies a prominent position. Although the drawing is somewhat damaged by the clouds that were added later and by some brown corroded spots, its quality is nevertheless impressive. WK
In this sheet Cuyp elevated two simple two-wheeled peasant carts, carelessly abandoned in a dune-like landscape, to serve as his main motif. He enhanced the monumentality of the theme by casting the foremost cart in shadows and silhouetting it against the sky and distant dunes. The other cart, set somewhat farther away and tilted from the loss of a wheel, catches the full light instead. This second wagon visually leads to the peasant dwelling and the haystack at the right. The two figures in the right foreground seem to be an afterthought, their static character contributing to the inertia exuded by the carts. The subtle palette contrasts curiously with the shapelessness of the landscape and the simple, archetypal shape of both carts. The motif, which occurs in the subtly watercolored sketches of dilapidated barns by Abraham Bloemaert, also recalls compositions with tumbledown sheds or fences as their main subject by Pieter Molyn, Jan van Goyen, and Salomon van Ruysdael.

The Grote Kerk in Dordrecht from the Southwest (verso)

black chalk, gray wash, watercolored in brown and red, heightened with white, 13.7 × 18.9 (5 ⅛ × 7 ⅓). Private collection, U.S.A. (Washington, Amsterdam only)

- This sheet — which agrees well with others that Cuyp made in the vicinity of Dordrecht about 1640 — was drawn on both sides; therefore, it must have been part of a sketchbook.¹ On one side Cuyp depicted the church of Alblasserdam and, at the left, the windmills at Kinderdijk. This group of windmills, still extant and today an important tourist attraction, was originally set up for the reclamation of a polder in the Alblasserwaard. In the drawing the windmills are visually balanced by a rise surmounted with a wagon near a house amid the trees. In the foreground are a few rowboats near an embankment reinforced with reed matting.

Cuyp used the left part of this drawing for his painting in London (cat. 7), in which the little windmills are less prominently yet very subtly repeated. Although Jan van Goyen is often suggested as the source of inspiration for this painting, the right part of this drawing more closely resembles the work of Salomon van Ruysdael. Two very closely related drawings, used by Cuyp in preparation for the painting, apparently originate from the same sketchbook (see cat. 7, fig. 1).

On the verso is a depiction of Dordrecht with the Grote Kerk seen from the southwest. Here, too, Cuyp privileged rural charm over the city. Beyond some tree trunks in the left foreground and a stretch of water with boats are trees and a farm and haystack, which partly obscure our view of the town. From early in his career, Cuyp drew a number of views of Dordrecht from the landward side, always using different vantage points.² wk
Moored Rowboats on a River, a Church in the Distance

black chalk, gray wash, watercolored in brown, pink, green, and yellow, heightened with white, partly brushed with gum arabic, 14.1 x 19.4 (5 3/8 x 7 3/8). Private collection, The Netherlands

- This drawing undoubtedly depicts a part of the watery area in the vicinity of Dordrecht and was part of a sketchbook made by the young Cuyp in about 1640 (see also cats. 61, 63). Topographical accuracy is entirely subordinated to the artistic effect of a water-rich landscape. Cuyp substantially reinforced the sense of depth by placing a sailboat at the point where the horizon seems to be farthest away. The artist also exploited both the rhythm of the rowboats to suggest depth and — albeit more subtly — that of the two poles in the foreground and the mast of the sailboat. However, the rowboat in the middle ground crossing the width of the water provides a movement parallel to the picture plane and, in its turn, rhymes with the motionless rowboats in the foreground, in one of which is a bent-over fisherman. The reflections suggest a light rippling off the water’s surface; however, the weather is chiefly quieter, perhaps even somewhat languid. Cuyp’s application of watercolor in exceptionally refined hues greatly enhances the verisimilitude of this Holland landscape.

Cuyp used the composition for his River View, a painting in Dulwich that can be dated about 1640.
black chalk, gray wash, graphite, pen and brown ink, heightened with white, partly brushed with gum arabic, 14.6 x 19.5 (5 3/4 x 7 1/2). Rijksmuseum, Amsterdam

Cuyp relied on this sheet for the background of Evening in the Meadows, a painting now in the Norton Simon collection and datable shortly after 1650 (fig. 1). In the painting, however, he suppressed a few anecdotal elements, such as the cows drinking, the little rowboat in the foreground, and the moored boat near the jetty.1

Here Cuyp superbly conveyed the atmosphere of a warm, windless afternoon: the water is virtually unruffled; a boat, its sail still unfurled, is pulled ashore between the trees; and two cows seek respite from the heat in the water near the jetty. The entire ensemble at the right, from the man pulling his boat to the jetty with a hook, to the horizontal lines of the boats and the verticals of poles and sails, and finally to the trees at the right, is built up in a stunning rhythm. The representation of depth—with the silhouette of a rowboat at the left extending above the dark water in the foreground, staggered into the distance with sailboats and a windmill—is particularly effective. On the hazy horizon can be discerned a church and a sailboat. Cuyp effectively used some watercolor to enliven this sheet.1

1 Aelbert Cuyp, Evening in the Meadows, The Norton Simon Foundation, Pasadena, Calif.
Cuyp rarely followed a sketch in a painting as closely as he followed this drawing in his Cattle and Cottage near a River (cat. 4). Even so, the artist made a number of significant changes. In the painting he allotted greater space to the river, enlivened it with a little boat with a peat rower, and embellished the path in the foreground with a few reclining cows, which in the drawing are sketched on the bank. The dilapidated dwelling, whose most stable element was apparently the chimney, seems to be somewhat more slumped in the painting. Cuyp also faithfully repeated the shadow cast by the tree on the wooden side wall. By widening the composition and raising the sky, Cuyp lowered the horizon of the painted landscape, thus adding substantially to the spaciousness of the scene. Finally, he incorporated action into the painted scene by including a man on the bank (mooring a boat containing peat) and an upturned wheelbarrow in the foreground.

The painting must have originated in 1640 or 1641, and thus the drawing, shortly before. The drawing was undoubtedly made in the vicinity of Dordrecht, as was his View of 's-Gravendeel (fig. 1), a drawing similar in composition and lighting. In both drawings, Cuyp used the contrasts of light and shade to define objects as well as the space that surrounds them.
A Windmill and Farm Buildings beyond Meadows

black chalk, gray wash, partly brushed with gum arabic, 18.3 x 30.4 (7 ½ x 11 ½).
Statens Museum for Kunst, Copenhagen (Washington, Amsterdam only)

- In this drawing, Cuyp filled the horizon with farmhouses, a church, a haystack, and a post-mill, while to the right a farmhouse, a tree, and a small, indistinct building are nearer to the viewer. In a remarkable tour de force he gave excitement to the virtually formless land in the foreground and middle ground. The only accent of any significance in this area is a bridge, which also articulates a water channel running parallel to the picture plane. A vast undefined sky unites the landscape.

Cuyp used motifs in this drawing for Portrait of a Family in a Landscape (cat. 3) of 1641, a painting in which Jacob Gerritsz Cuyp was responsible for the portraits and Aelbert for the landscape elements. A comparison of the drawing and the painting demonstrates beautifully how Aelbert combined inspiration with practical use. Initially, he must have been excited by the complex problems and possibilities presented by drawing this landscape. Only subsequently would he have understood how to introduce the drawn panorama into a painted landscape background. wk
In this drawing Aelbert Cuyp depicted a setting typical for Holland: a wide stretch of water, presumably a river, is bordered by a dike or raised embankment with a road — here made visible by a walking figure — while a wooden bridge spans the link between this waterway and a pond or some ditches. A few rowboats — one with a bent-over fisherman, inspected by a figure on the bridge — are moored in a sheltered spot just behind the bridge. This jetty is apparently situated near a farm or an inn surrounded by trees. By including three sailboats and a rowboat, Cuyp underscored both the breadth of the river and its importance for transportation.

The drawing is one of a group of sheets most probably from a sketchbook consisting of both sensitively watercolored drawings (cat. 69) and black chalk drawings with wash applied with brush (cat. 65). Cuyp took great pains to record reality in these drawings made on the spot, but subsequently elaborated them when he returned to his studio.\footnote{WK}
A Village near a Bridge

black chalk, gray wash, watercolored in yellow, brown, and green, partly brushed with gum arabic, 18.5 x 30.3 (7 5/16 x 11 3/8). The British Museum, London (London only)

- Cuyp viewed this village, with its houses situated on either side of a wooden bridge, from across a pond that spans the entire breadth of the sheet. The dwellings on the left, surrounded by trees, are partially hidden behind fences, while three rowboats are moored in front of them. Beyond the bridge and the houses at the right, set somewhat farther back than those at the left, the sail of a boat is seen, clearly indicating a larger expanse of water up ahead. The pond is bordered in the foreground by long grass on the bank and by a quay with a slightly projecting wooden structure, presumably a dilapidated jetty. At a later stage Cuyp added the two upright poles in front of it to create a greater sense of space in that area.

This sheet shares its provenance with another drawing in the British Museum (cat. 66) and must have come from the same sketchbook (see also cats. 64, 65, 69, 70). These sheets represent villages and marshland in the vicinity of Dordrecht. Cuyp brilliantly characterized the location of the houses, huts, and farms in a landscape abounding with water. With their subtle execution and sensitive use of color, these sketches belong to the best that Dutch seventeenth-century landscape drawing has to offer. **Wk**
Farmhouses along Both Sides of a Canal

black chalk, gray wash, watercolored in green-gray, 13.5 × 18.6 (5 ⅞ × 7 ⅞). The Metropolitan Museum of Art, New York, Bequest of Mrs. H.O. Havemeyer, 1929 (Washington, Amsterdam only)

- A striking variety of structures, including thatched huts and a fairly tall stone building, flank a summarily indicated waterway that recedes into the distance. Contributing substantially to this effect is the rowboat that casts its reflection in the water and the illumination of the farmstead at the right. Cuyp masterfully harmonized the compressed roof line of this house with the fence before it. He also elaborated on the various tonal values of the trees at the far right and left. Using a subtle, miniature-like technique, also to be admired in the drawing in Berlin (cat. 69) for example, Cuyp gave this drawing great visual and imaginative appeal.

The drawing was certainly once larger. The wash for the sky, now almost invisible, would have had more significance in the originally wider format. An indentation running parallel to the upper edge raises the suspicion that a farther reduction was once intended. wk
black chalk, gray wash, watercolored in green, brown, blue, and ochre, partly brushed with gum arabic, 18.3 × 30.6 (7 ⅞ × 12 ⅜). Staatliche Museen zu Berlin, Kupferstichkabinett (Washington, Amsterdam only)

- This is one of the richest, most sensitive, and best-preserved of Aelbert Cuyp’s colored drawings. Several houses are grouped around a windmill at some distance to the right. Important vertical accents are provided by a few hay barracks with their high stakes. Amid the trees farther back at the left are a couple of dwellings, one of which is almost completely hidden from sight. On the distant horizon Cuyp even suggested a stretch of water by sketching the mast of a sailboat. The foreground is filled with marshland transected by glistening gray water. The artist carefully applied the watercolor in gray, light green, blue green, and brown yellow — it is especially beautiful over the jumble of clumps of earth with grass, some of which he indicated with the tip of the brush and some, with swift chalk strokes, partly moistened. The expansive sky was left empty.

In subject and execution, this drawing is related to sheets in New York, Copenhagen, and London (cats. 65, 67, 68). One may safely assume that Cuyp made them just prior to 1641, the year in which he and his father executed the painting in Jerusalem (cat. 3), a work that includes comparable motifs in the distance. WK
River Landscape

black chalk, gray wash, watercolored in red-brown, yellow, and green, 18.9 × 30.3 (7 7/8 × 11 1/8 in), Musées Royaux des Beaux-Arts de Belgique, Brussels (Washington, Amsterdam only)

of reeds. One of the two sailboats has already rounded the curve in the river, while a rowboat floats along just right of the center. At the far right, a dwelling nests amid trees on the bank at a point where a branch in the river is suggested. Cuyp worked out the foreground, an irregular section of the bank, with great feeling for the unevenness of this piece of land, which with the exception of a tree and a few stakes from a dilapidated timbering has no details of any significance. Cuyp's mastery in characterizing such formless land, manifest in many of his landscape drawings, is exceptionally well expressed here. His subtle touch is also evident in the brilliant horizontal accents in the water at the right.¹

This drawing is similar to a group of meticulously executed sketches of the Dutch countryside, almost surely made in the immediate vicinity of Dordrecht (cats. 64–69). The elaboration of the foreground is reminiscent of the series of larger panoramas, among them Dordrecht Viewed from the East (cat. 72). While Cuyp usually depicted a town or a village in the middle ground or in the distance, River Landscape lacks any topographical feature identifiable today. wk

- Aelbert Cuyp has here depicted an exceptionally beautiful, wide, languidly flowing river of a type perceived as characteristic of the lowlands in Holland. The river, which bends in the distant left, winds around somewhat higher land in the middle of the drawing, where a solitary house and the trees that shelter it are distinctly reflected in the water. A series of poles mark the shoals, as do the growth
With a great sense of drama, Aelbert Cuyp presented the town of Amersfoort towering up in a slightly uneven lowland. Some trees in the middle ground indicate the passage of a brook, while to the right is a beautifully characterized farmhouse with a thatched roof. We assume that Cuyp drew the town from the Randenbroek estate and that the Heiligenbergerbeek (a brook) is shown at the left. Rising up at the left is the tower of the Amersfoort Onze Lieve Vrouwekerk, which is almost one hundred meters tall and one of the most famous towers in the Netherlands.\(^1\) The drawing certainly predates the year 1651, when the tower lost its spire, which was rebuilt in 1655. Somewhat farther right is the Sint Joriskerk and to its right, the Agnietenkapel.\(^2\)

The refined execution of the town, particularly evident in the meticulous and precisely placed shadows and in the extensive coloration, almost makes the drawing a completely independent work of art. Though smaller in size, it appears to belong to the group of more broadly laid out panoramas, such as the views of Rhenen and Arnhem (cats. 73, 74), that can be dated to the early 1640s. Cuyp presented two other views of the town in drawings in Chantilly and Edinburgh, the latter one serving as the point of departure for the painting in Wuppertal.\(^3\)
Dordrecht Viewed from the East

While this drawing is primarily a view of Dordrecht, the leading role is played by the foreground—a bank along the Merwede River—with a border of reeds in the water, some plants in shallow areas, a dike, and the fence wending over it at the far left. The city, easily identifiable by the tower of the Grote Kerk, spreads out on the horizon but is largely concealed behind groves. The Rietdijkspoort and the nearby windmill mark the bend in the river where the city view ends and the Papendrecht skyline on the far shore begins.¹ The clouds were added by a later hand.

Cuyp used this view of Dordrecht as a background motif in several paintings that date from the early 1640s.² Consequently, this drawing, in which Cuyp displayed such masterful technical control, must have originated shortly after 1640. One of these paintings (Reiss 1977, 52), moreover, includes a shepherd based on Cuyp’s Rotterdam sketch (cat. 105), a combination of motifs that indicates Cuyp’s intense drawing activity in these years. WK
Aelbert Cuyp used the full width of this sheet to give shape to the walled town within its surroundings. Rhenen lies to the right nestled at the base of a foothill of the Amerongseberg. Cuyp drew this scene from the adjacent Grebbeberg. In the distance at the left, past the Rhine River, is the lowland of the Betuwe region. The old, somewhat dilapidated walls of the town merge with the undulating line of the landscape. The Berg or Oostpoort (East Gate) in the middle is the axis around which the composition revolves. Visitors entered Rhenen there through an outer gate, behind which stood the old medieval gate with its two conical roofs. Other than the dominating tower of the Sint Cunerakerk, the town includes only a few buildings of any distinction.

Cuyp corrected the church tower heavily with white bodycolor, and as a consequence this part of the drawing may be considered less successful. The openness of the top section of the tower lacks sophistication, while the characteristic outline hardly shows up well. On the other hand, Cuyp cleverly enhanced the sweep of the river by means of a moored sailboat. He transformed the terrain in the foreground into a natural repoussoir with deep, dark passages, some shrubs, and shadows. He gave shape to the land on the other side of the river with a subtle and summary drawing technique, so that the viewer’s eye is drawn to the horizon. The lure of the distance, here expressed in an early drawing, would continue to play an important role in Cuyp’s conception of the landscape.

Many seventeenth-century artists were fond of portraying Rhenen. Hercules Seghers, Rembrandt, Jan van Goyen, and others recorded the town from the east. Cuyp himself also drew two other views of Rhenen: one is in the Teylers Museum (Haverkamp-Begemann essay, fig. 3) and must have been made during an earlier trip; the other, formerly in the Koenigs Collection, is now in Moscow.\(^1\)
In the past, this splendid view of Arnhem was divided in two. Fortunately, both sections ended up in the Albertina and have since been rejoined. Together, they approximate the maximum size of panoramas of this nature in Cuyp’s oeuvre, namely about fifty centimeters wide.

When Cuyp recorded Arnhem in this sheet, he was closer to the town than he was when working on the Amsterdam drawing (cat. 75), as is clear from the tower of the Grote Kerk (church of Sint Eusebius), here elaborated in greater detail. In both works, the artist seized the opportunity of presenting a rich and varied foreground, here with a few trees and at the right a distant view over a lowland with rows of pollard willows. The south side of the city is marked by the post-mill on the retaining wall, which earlier occupied the center of the right half of the sheet. To the left, before the Grote Kerk, the artist looked down on numerous roofs. This drawing makes a slightly less polished impression than does the Amsterdam sheet. While the latter drawing was provided with a cloudy sky by a later hand, here the sky is a very light blue—probably also added later but before the drawing was divided in two.
As in his other panoramic views, Cuyp partly concealed the town profile behind an essentially dominating foreground. A path to the left of center winds its way up a rise in the landscape and past a solitary oak tree at the right. An earth embankment or wheat field on this rise largely obscures the view of the town in the right half of the drawing; only a tower and a somewhat taller gable roof protrude. Cuyp, who assumed a low vantage point, must have stood northwest of the town, beyond the Sint Janspoort (Saint John's Gate) near a place formerly called the Tamboersbosje (Drummers grove). Though largely hidden from view by trees, a few more buildings are just visible at the left. The tower of the Grote Kerk (or Sint Eusebius) determines the city view.¹

With sensitive handling of the brush and gray, ochre, green, and red-brown watercolor, Cuyp produced a highly polished drawing, marred only by the cloudy sky added in the eighteenth century. The exceptionally consistent execution and the existence of a view of Arnhem from the same angle in the Prentenkabinet in Leiden gave reason to suppose that the sheet under discussion was produced by Cuyp in his workshop.² The drawing in Leiden, however, is a copy of the Amsterdam sheet. The initial sketch in black chalk in the present drawing is fully consistent with the drawing in Vienna (cat. 74). Cuyp, however, finished the two views of Arnhem in his workshop in different ways. The Vienna drawing, for instance, was not brushed with gum arabic, while the Amsterdam sheet owes its somewhat polished character to just this treatment.³ Naturally, the later additions in the sky also engendered a different appearance. ¶
Calcar with Monterberg in the Distance

black chalk, gray wash, watercolored in green and ochre yellow, partly brushed with gum arabic, 18.5 × 49.5 (7 5/16 × 19 1/2). The Metropolitan Museum of Art, New York, Promised gift of an anonymous donor (Washington only)

• For this view of Calcar and the Monterberg Cuyp took up a position on a high place near a partially leveled rise capped only by a few shrubs deformed by the wind. The foreground here functions as a coulisse behind which the distant vista unfolds. The drawing belongs to a group of broad panoramas, all with a fold in the middle, produced in the early 1640s. In this series, most sheets of which bear witness to a topographical interest, this drawing and *Hilly Landscape with a River* rank among the freer landscape studies. Cuyp’s penchant for the contrasts in elevation of the landscape in the vicinity of Nijmegen, Cleves, and Calcar — contrasts he so lovingly worked out in his paintings — appears to have originated in these drawings. This sheet, too, seems to have aroused Cuyp’s interest in depicting panoramas with scattered trees, a theme he would embellish later in his Nijmegen series (cats. 91–93).

Later on, in the 1650s, Cuyp used the distant vista in this drawing for the panorama in his painting in the Corcoran Gallery of Art, Washington (cat. 25). Even though he there interpreted the foreground coulisse entirely differently, he never lost sight of the basic artistic principle of creating contrast between the foreground and background. wk
In this wide lowland prospect with a few church spires and a low ridge in the distance, Aelbert Cuyp drew a shepherd with some sheep on a slope at the left. Together with the shepherd, the viewer looks down upon the considerably lower sheep pen. Cuyp, thus, masterfully established a relationship between the viewer, the foreground, and the far-reaching expanse. Although attempts have been made to localize the landscape—the river threading its way through the landscape from left to right is continually identified as the Rhine—no certainty of its location exists.1 The vista in a painting in Frankfurt, Shepherd with His Flock, displays some similarities.2

Cuyp sketched the distant view before adding the shepherd and the sheep. Nevertheless, the drawing appears to have been created in a single session. The cloudy sky is evidently by a later hand. Because the technique for defining the trees in the plane is less sophisticated here than in Cuyp’s drawings of the early 1650s of the vicinity of Nijmegen (for example, cats. 91–93), an earlier date for this drawing, probably between 1640 and 1645, is indicated.

The composition with a shepherd on a height looking out over lowlands is reminiscent of a painting with the same motif by Herman Saftleven in Rotterdam (Wheelock essay, fig. 15). Cuyp was quite possibly influenced by this Utrecht artist, who in his early years worked in the manner of Jan van Goyen and in the 1640s—thus still before Cuyp—discovered the possibilities of the sun-drenched landscape. wk
The Hague Viewed from the Northwest

black chalk, gray wash, watercolored in yellow and green, 18.5 x 49.4 (7 7/16 x 19 7/8). Rijksmuseum, Amsterdam

yellow tints later in his studio. The overcast sky is an eighteenth-century addition.

Cuyp was almost overwhelmed by the great breadth of the panorama: he could never have taken in the dunes at the right in a single glance with the Grote Kerk. He depicted the church from a somewhat different angle than that which he would have seen from the dunes, probably to make it more recognizable.

Cuyp portrayed the Hague Grote Kerk or Sint Jacobskerk yet another time, close by and from the north, in a view determined by groves rather than by buildings, with the exception of the church (fig. 1). Although the Amsterdam drawing displays a more advanced approach, both drawings in all likelihood stem from the same trip, when Cuyp also made his sketches of Scheveningen, Leiden, and Haarlem. The different aspect presently characterizing these drawings is mainly owing to the reworkings Cuyp later introduced.

This drawing most likely dates from shortly after 1640. A source of inspiration for such town profiles with a richly detailed foreground may well have been Rembrandt’s View of Amsterdam, an etching most likely made in 1641. Should Cuyp have traveled to The Hague in 1643, he would certainly have visited his uncle Benjamin Cuyp, who was recorded as living there in that year.
Dunes with the Ruins of a Manor in the Distance

black chalk, gray wash, partly brushed with gum arabic, 19 × 30.2 (7 ½ × 11 ¾). Rijksmuseum, Amsterdam

- Cart tracks run diagonally through the dunes from the lower right to the left, toward a house whose roof alone is visible. At some distance at the right in the lowlands, the tall remnants of the main tower of a castle rise. This is probably Huister Kleef, a manor that was situated just north of Haarlem at the edge of the dunes.¹

Cuyp allotted the largest share of the drawing to the sky; the line of the horizon gradually merges into the dunes, with only a few buildings or trees. In the dunes, Cuyp paid special attention to the clifflike formations where the sand has steadily been blown away from the vegetation. The line of the path is interrupted only by some growth in the foreground and by the shadow cast on it by a dune.

Stylistically, the drawing is related to both views of Scheveningen, especially the one seen from the east.² The drawing, which thus corresponds with the panoramas from the beginning of the 1640s, may have been reduced to its present width by Cuyp himself. Rarely is Jan van Goyen’s influence on Aelbert Cuyp so outspoken as in this sheet. wk
Dordrecht Viewed from the Northeast

black chalk, gray wash, watercolored in brownish yellow, partly brushed with gum arabic, 15.9 × 50.6 (6 3/4 × 19 3/4). Colnaghi, London (Washington, Amsterdam only)

- In this drawing Cuyp depicted Dordrecht stretching out on the other side of the water, with low buildings partially concealed by fortifications. The drawing ends at the right, just where the silhouette of Dordrecht's highly distinctive Grote Kerk would have appeared. Thus, only a few towers, windmills, and some ship masts rise above the buildings; at the far left are the Rietdijkspoort and the nearby mill, and to the right of center, the Groothoofdspoort. The roof of the Nieuwe Kerk and many tall trees, presumably located in the gardens just outside of the Sint Jorispoort, are visible to the left of center. To the right is the tower of the town hall, just to the left of a sailboat's dark silhouette. The windmill at the right is identical to the one on the bulwark in the Lehman Collection drawing (cat. 82). The little gate on the quay to the left of center was known as the Melkpoortje (Small Milk Gate). The vegetation in the foreground serves the important artistic function of a repoussoir and enhances the vastness of this panorama, which Cuyp surveyed from the other side of the Noord River, either from the embankment near Papendrecht or from a boat. The artist colored the drawing with subtle gray and brown washes, accents in ochre, and reddish brown in some of the roofs. The combination of the faintly sketched cityscape and the broad washes of water with strong reflections lends this drawing an extraordinary richness enhanced by the simplicity of the profile and the complexity of the details.

Cuyp used the drawing for a few paintings, though always including the Grote Kerk at the right. In the paintings as in this drawing, the city has a somewhat curved skyline, slightly higher in the middle than on the sides. The best-known adaptation of the drawing is the panorama of Dordrecht in two paintings (Los Angeles County Museum of Art; Museum der Bildenden Kunste, Leipzig), which originally may well have been one, larger work, for after all, they are presented as a single entity in a drawing by Aert Schouman from 1759. According to Schouman, the work by Cuyp dates from 1647. Neither painting is dated, but a genesis after 1645 is highly improbable, for they correspond with Cuyp's early style and thus were more likely produced between 1640 and 1643. The most plausible dating for a related painting in the Turin art market, depicting not only a view of the city but also comparable vegetation along the embankment, is about 1644–1645.
In this drawing Aelbert Cuyp concentrated on the sailboats along the quay by an old section of the city wall; above it various buildings rise, with the graceful tower of the Groothoofdspoor (Gate to the Main Pier) serving as an elegant topographical reference. Cuyp depicted a number of vessels at the far left along the wide quay that extends out from the gate to the west. The entrance to the Wolwevershaven (Wool-Dyers' Harbor) must have been between the boat at the right and the tower on the wall. The drawing presumably originated before 1647, when the palisades near the entrance of the harbor at the right were replaced by a wall. Cuyp probably made it during the same drawing campaign that yielded the sheets in the De Boer Collection, the Lehman Collection, and in the Rijksmuseum, Amsterdam (cats. 82–84). This correlation and the vertical fold in the left half of the sheet raise the suspicion that the drawing was initially far larger, most probably with a view of the watery expanse at the left.

Cuyp used the left section of the drawing as his point of departure for a painting from the mid-1650s.⁴ wk
Dordrecht Viewed from the North, with a Windmill in the Foreground

While in principle this drawing corresponds nicely with the views of Dordrecht in the De Boer Collection and the Rijksmuseum (cats. 83, 84), the differences are not without significance. Given the fold to the right of center, it is not improbable that a section at the right has been lost, along with a bit at the top and bottom. As these reductions could have been executed by the master himself, their significance is minor. Far more important for the comparison with the two other sheets, however, are the lower horizon and the introduction of the strongly silhouetted post-mill on the bank, the poles in the water, and the sailboat—powerful visual accents that almost render the town profile as an interesting background rather than the focus of the artist’s attention.

The windmill supposedly stood near the entrance of the Nieuwe Haven (New Harbor), the part now called the Wolwevershaven (Wool-Dyers’ Harbor), and is probably the same windmill whose sails are visible at the right in the Amsterdam drawing (cat. 84). Compared to the drawing in the De Boer Collection, the Lehman drawing places Cuyp’s vantage point farther away from the Grote Kerk and a little more to the east. The difference in orientation is particularly evident in the transept of the church; in this sheet part of the east roof can be seen, while in the other drawing a bit of the west roof is visible.

Cuyp probably made this drawing in 1647. The quay at the foot of the windmill went up in that year, while the covered gallery near the Papenbolwerk (Papists’ Bulwark), which was demolished in that year, seems to have vanished.

This view of Dordrecht recurs in a few paintings from the school of Aelbert Cuyp, namely works in the Museum Boijmans Van Beuningen, Rotterdam, and the Dulwich Picture Gallery, London.\(^1\)
Cuyp must have seen this view of Dordrecht from the other side of the Oude Maas, just east of Zwijndrecht. In addition to the Grote Kerk, important landmarks include the round Engelenburch tower on the city wall, and the tall building at the far left near the Blauwpoort (Blue Gate), which flanked the entrance to the Nieuwe Haven (New Harbor). More to the right is the Vuylpoort (Dust Gate), and to its left and somewhat farther into the town is the tower of the Gevangenpoort (Prison Gate); both marked the entrance to the Oude Haven (Old Harbor). Farther right still, the palisades and a substantial number of masts belonging to the moored boats indicate the opening to the city moat, where not much later the Nieuwe Kalkhaven (New Mortar Harbor) would be constructed.

Of prime importance for dating this drawing is the presence of the Papenbolwerk, the old city wall in front of the Grote Kerk. This defense was demolished in 1647 to make way for the Maartensgat (Martins' Gap) as an outport of the Oude Haven.

Cuyp first quickly laid in the composition in black chalk. While he left a reserve for the sailboat in the trees at the right, he drew the sailboat at the left over the initial sketch. The reflections in the water were first indicated in chalk and subsequently elaborated with a subtle wash. Cuyp used these reflections to suggest the water's quiet surface. As in so many of Cuyp’s panoramas, the overcast sky is a later addition.

In this lovely city view, Cuyp united his topographical interest with his fascination with the countryside, here delicately rendered in the distant prospect at the right.
Dordrecht Viewed from the North, with the Grote Kerk and the Groothoofdsport

Stylistically this drawing is very close to the view of Dordrecht in the De Boer Collection (cat. 83), with which — given their similar inscriptions — it undoubtedly shares a mutual provenance. The artist used the sheet for his views of Dordrecht in Kenwood and Ascott (cats. 35, 36), in which he depicted the city profile partially concealed by a large ocean-going vessel. The composition of the ships along the quay is virtually identical to that in the painting in Kenwood, though the fall of light deviates somewhat. In the painting in Ascott, he made more explicit use of the middle section of

the drawing with the windmill. For these paintings Cuyp also relied on a drawing of a cargo ship and a timber raft (cat. 85). In the Washington painting (cat. 28), Cuyp again derived the city view from the present drawing, though in a more generic way (however, with some details literally adopted).

Here, Cuyp studied Dordrecht from the middle of the water, at the confluence of the Oude Maas, the Merwede, and the Noord Rivers. While the Grote Kerk dominates the city, the main motif is the Groothoofdsport at the left. To the right of the Grote Kerk, a drawbridge marks the entrance to the Nieuwe Haven. The view of the Oude Maas is largely blocked by a sailboat crossing in the direction of Zwijndrecht, the village on the opposite bank.

Cuyp initially laid out the drawing very sketchily, probably concentrating on the city profile. At this time he also drew two other parts of the city in the lower left corner: a section of the city wall with houses — presumably the one to the right of the gate hidden behind the sails — and, farther to the left, some more houses, which were partially erased at some point. He finished the drawing later, even down to the reflections in the water. The overcast sky was applied by a later hand.

This and the following sheet (cat. 85) bring into focus the role Cuyp’s drawings played in preparing his paintings. As a draftsman, Cuyp created a large stock of visual ideas, which found their way into numerous paintings by the master and from the studio as well. That Cuyp drew rows of houses, which he deemed necessary to complete his image of the city, in the lower left corner of this sheet underscores the topographical importance and the practical purpose he attached to this and similar drawings. His later interventions, however, particularly the application of watercolor and gum arabic observed in so many of his drawings, clearly indicate that Cuyp attempted to give these works a finished quality.
A Freight Boat and a Timber Raft on Calm Water

black chalk, gray wash, 16.8 × 25.4 (6 ⅞ × 10). The British Museum, London

This sheet and the Amsterdam view of Dordrecht (cat. 84) served as the point of departure for a composition that Cuyp realized in the two impressive paintings in Kenwood and Ascott (cats. 35, 36). In principle, this drawing is closest to the Ascott painting, which includes (as the Kenwood painting does not) a sloop at the right sailing toward the raft. Moreover, the two workmen on the raft at the left in this sheet and in the Ascott painting have similar poses. In both paintings, Cuyp introduced a helmsman at the rafts’ rudder. In the drawing, Cuyp established a balanced interrelation-

ship among the raft, the freight boat, and the sloop, but only after introducing a major compositional change. Initially he depicted a ship under sail seen from the side instead of the freight boat. The helmsman at the rudder can still be discerned at the left. While drawing, Cuyp probably altered the direction of this ship first, and only subsequently included the motif of transferring barrels to a rowboat. As this action, naturally, could not take place on a boat under full sail, he omitted the sail in the two paintings. Judging from the wash he applied in the sail to suggest the play of light, the initial composition was in an already fairly advanced stage. Cuyp probably observed the loading of barrels near a quay rather than in the middle of the water, as seen in both paintings. The sloop sailing away, which is lit from the right in the Ascott painting, is shown in the present drawing with an illumination similar to that in a painting at Waddesdon Manor.

In the seventeenth century, Dordrecht played an important role in the lumber trade. Outside of the Sint Jorispoort (Saint George’s Gate) on the city’s south side were many houtplaetzen (lumber yards), sites for the transshipment of wood. The lumber was imported from Germany on rafts and moored in the Merwede River, just south of the Rietdijkspoort.
In this small sheet, Cuyp essentially studied two unrelated crafts: a rowboat in which an oarsman transports some passengers (at least four), and a ferry carrying quite a few people and a wagon with two horses. For the rowboat, Cuyp was seeking an effective way of depicting figures compactly grouped in foreshortening. For the ferry, he was looking for the correct shape for the prow and stern, while also introducing contrasts through diagonal accents such as the large rudder and the ferry rope. He elaborated the boat’s reflections with brush and light gray ink, thereby showing just how important he deemed this aspect. Defined with some chalk and a few vigorous brushstrokes, the sky is undoubtedly autograph. Buildings dot the exceptionally subtly drawn horizon, with a town suggested in the distance at the right.¹

Cuyp used this drawing and a sheet in Berlin (fig. 1) to prepare a painting now in the Wallace Collection in London (fig. 2). Although in the painting the ferry sails in the opposite direction and crosses paths with a large sailboat (creating a confusion of masts and sails), the reflections are very close to those in this drawing. The right foreground of the painting includes the rowboat in the present drawing,² while Cuyp used the Berlin drawing to chart the situation on the river in general terms. WK
Cuyp depicted Nijmegen with the Valkhof in other drawings, all probably executed during a trip of about 1652. A drawing now in a German private collection served as the preparatory study for the view of Nijmegen from the northwest known in versions in Woburn Abbey (see cat. 43, fig. 1) and in Indianapolis (cat. 33). Finally, Cuyp again drew the Valkhof from close-up in a sheet in the Pierpont Morgan Library, which served as the point of departure for the painting in Edinburgh (cat. 43).
The Ruins of Ubbergen Castle

black chalk, gray wash, 18 × 27.1 (7 7/8 × 10 5/8). Graphische Sammlung Albertina, Vienna (London, Amsterdam only)

By choosing such a low vantage point, Cuyp was able to give the castle and the nearby hills a dramatic appearance — a visual trick followed by many Dutch artists, for example Roelant Roghman (1627–1692) in his impressive series of castle views done in 1646 and 1647. Cuyp’s interest in topographical “landmarks,” however, differed from Roghman’s, who concentrated primarily on buildings. Cuyp’s inclination — in which topographical accuracy is wedded to the picturesqueness of the motif — can best be put into perspective by placing the drawing in his series of views near Nijmegen, such as the closely related view of Nijmegen with the Valkhof from the east. 

Ubbergen castle was located about four kilometers southeast of Nijmegen. With this view of the castle in its ruined state surrounded by water and set before a distinctly demarcated mountain range, Cuyp conjured up one of the most romantic seventeenth-century visions of the lower Rhenish region — a vision he further reinforced in the painting based on the drawing (cat. 31).

In the painting, Cuyp reduced the repoussoir motif of the tree to a bush, thereby underscoring the monumentality of the ruins. Moreover, he emphasized the foremost corner tower by making it more slender, illuminating it more forcefully, and stressing its reflection. Cuyp also subtly heightened the mountains in the background so that this tower just barely transects their outline. He introduced a horseman and a shepherd as repoussoir elements, thus providing a point of reference for measuring the building’s scale. In conceiving the drawing Cuyp must have played with a similar idea, for erased traces of an initial lay-in indicate that he had included two figures at the edge of the moat. The sky at the right in the drawing is filled with ominous clouds primarily done in wash, possibly added in the eighteenth century. In the painting Cuyp reserved this area of the sky for an intense evening light.
When making this drawing, the artist looked out from the Sternberg near Cleves over the Rhine river valley to a range of low distant hills, probably the heights near Arnhem. The course of the Rhine is far more regular now than it was in the seventeenth century. At that time, the Rhine forked at an island, on whose eastern point was located the strategically vital Schenkschans Fort, here mainly indicated as a village with a church and a windmill. 

Cuyp accentuated the river’s course by means of two sailboats and a rowboat on the otherwise smooth water. The slope of the hill where the artist took up his position is sturdily and cursorily delineated. At the foot of the hill a stretch of the woods is robustly indicated in chalk, making a splendid contrast to the fine draftsmanship of the view in the distance. 

The powerful and swiftly executed sketch on the back belongs with the Amsterdam Cleves Viewed from the Galgenberg (cat. 90). Accordingly, in the original sketchbook this sheet preceded the Amsterdam drawing, and the two views were almost certainly drawn in that order.

Jan van Goyen made a rapid chalk sketch of this view from the same spot in 1650, shortly before Cuyp visited this area. Compared with Van Goyen’s deft aide mémoire, Aelbert Cuyp seems to have produced a highly meticulous study. Still, he was not interested solely in topographical accuracy, as is evidenced by his depiction of Schenkschans Fort; he sketched neither its defenses nor the details of the onion-shaped church tower, which would have been immensely helpful in identifying the location. Cuyp’s priority here must have been to give a general impression of the Rhine valley.
Cleves Viewed from the Galgenberg

black chalk, pencil, gray wash, 19 × 27.8 (7 ½ × 10 ¼). Rijksmuseum, Amsterdam (London, Amsterdam only)

Stretching out beyond the town is a vast panoramic landscape with a river and a sailboat. The artistic high point, however, is the undulating line of the town wall that Cuyp repeated in mirror image in the shaded foreground. Cuyp darkened the foreground a deep black with moistened chalk and gray wash, probably after signing his name at the lower left and lower center in the drawing.²

A telling comparison may be made between this drawing and a View of Cleves by Jacob Esselens in the Hermitage. Esselens chose a vantage point somewhat farther away from the town, probably at the foot of the hill on which Cuyp stood. While Cuyp evinces a subtle yet uniform interest in detail, Esselens devoted far greater attention to the contrasts of light and shade.³

A later owner provided a framing line around the main section of the composition, most likely with the intention of framing or reducing the drawing accordingly.

Cuyp extended this view onto the verso of the sheet in London (see cat. 89). This affords a good idea of how the artist worked: here he used the back of the previous sheet in his sketchbook when the one he was working on proved too small to contain his vision.⁴
Calcar and the Monterberg
Viewed from Cleves

black chalk, gray wash, 15.9 x 23.9 (6 1/4 x 9 7/16). Collection Groninger Museum, The Netherlands
(Washington, Amsterdam only)

- From the Galgenberg near Cleves, Cuyp surveyed the landscape in the direction of Calcar—looking to the east-southeast. Halfway up the slope in the right foreground was the notable topiary linden tree near the leper house situated on the town's outskirts. Cuyp indicated the distance to the town by rendering a small part of the southern ramparts at the far left. The hill's height prevents us from seeing the full breadth of the water in the Kermisdal, which is reduced to a narrow ribbon, most noticeable at the left. Whether or not the two tiny figures pulling a rope at the lower right are near the water is unclear. The bank on the opposite side is beautifully delineated with a strip of land, trees, and shrubs. Rising in the distance at the right is the Monterberg, the hill on which stood the ruins of the castle of the dukes of Cleves, including a high tower. In the plains at the left can be discerned the towers of Calcar; and in the far distance, the remarkably tall tower could only belong to a church in Wezel.

Cuyp probably incorporated the distant view in a picture that may have been the pendant to a work in Woburn Abbey (see cat. 43, fig. 1), an image known from two workshop paintings.

On the verso (fig. 1), Cuyp sketched two sailing vessels and a little windmill in a summary yet convincing manner.

WK
The Rhine Valley Viewed from Nijmegen toward the Elterberg

black chalk, brush, and gray ink, 15.4 × 24.7 (6 ⅛ × 9 ⅞). Staatliche Museen zu Berlin, Kupferstichkabinett (Washington, Amsterdam only)

- From a high vantage point in or near Nijmegen — possibly the Belvedere — Cuyp sketched the lowland with the Elterberg in the distance. The foreground is occupied by a lake, before which a few figures, including a seated draftsman, are evidently admiring the view of the lake, a fishing boat, a windmill on the opposite bank, and its reflection in the water. For this panoramic view with emphatically silhouetted figures placed in the darkened foreground, Cuyp relied on principles introduced by the late sixteenth-century landscape artist Paulus Bril, which were widely followed in the Netherlands. The middle ground displays the graceful rhythm of rows of trees so characteristic of the drawings Cuyp made in the vicinity of Nijmegen during the early 1650s (see also cats. 89, 91, 93).

   The dominant theme in the drawing is the Elterberg with its steep south flank, a distinguishing topographical feature depicted by many artists. The abbey church of Upper Elten crowned its highest point. Several tall towers, probably belonging to a ruined castle, can be discerned more to the north, at the left in the drawing. The cloudy sky is a later addition. WK
From the Sternberg near Cleves, Cuyp drew the Elterberg with the abbey church and the cloister buildings and, at the left, Lower Elten. In the plain at the left lie the villages of Rindern and, farther to the right, Brienen. Cuyp depicted the Rhine at the foot of the hill, with some sailboats and reflections in the water. With its subtle effect of light and shadow in the groups of trees in the low-lying land at the bottom of the Sternberg, this drawing is more elaborate than the other sketches the artist made in the surroundings of Cleves and Calcar.

The same landscape recurs in the painting in Woburn Abbey (see cat. 29, fig. 1), in which two horsemen have halted near a sleeping shepherd. One of them has taken out a sketchbook to record the panorama. Rarely do a drawing and painting together convey such a sensitive portrayal of the pleasure taken in the sheer beauty of a vista. Whereas the use of this landscape in the Woburn Abbey painting is convincingly realistic, its use in the painting of the young Pompe van Meerdervoort boys (cat. 29) is entirely imaginary. wk
Even in his earliest work, Aelbert Cuyp avidly depicted waterside vegetation. His predilection for using plants as decorative filler in the foreground of his paintings is evident in early works, such as his 1641 family portrait (cat. 3) and his A Farm with Cottages and Animals (cat. 10), as well as in very late works, including the couple on horseback in Washington (cat. 40). He situated the plants in their natural surroundings in one drawing, namely the Three Cows near a Fence with Butterbur in the Fore-ground (cat. 97). Cuyp’s distinct interest in and depiction of such plants have led to the (not always decisive) attribution of several detailed studies of plants to this master.1 Unfortunately, identification of the plants studied by Cuyp is not as easy as it might seem: rhubarb, burdock, sorrel, and butterbur are the names most often forwarded, often without solid justification.

Jacob Gerritsz Cuyp must have introduced his son to the meticulous rendering of plants, as can be deduced from a few of his drawings and the pronounced vegetation in Diversa animalia, his series of animal studies.2 Jacob’s interest in vegetation was probably stimulated by Abraham Bloemaert, who not only drew several studies of plants but also included large plants in the foreground of several of his paintings.3

In this drawing Cuyp seems to have depicted the leaves of curly rhubarb (Rheum undulatum). Cuyp was not the first to portray this plant: Pieter Saenredam in an earlier sheet dating from 1630 (Staatliche Museen zu Berlin, Kupferstichkabinett)4 noted that he had drawn “Dese plant rhabarber … naer ’t leeven” (this rhubarb plant… from life). Rhubarb was originally introduced in Europe from Asia, and Saenredam’s study is thus primarily botanical in nature. Bearing this in mind, Cuyp made his sketch not along a bank, but rather in a garden. Moreover, Cuyp seems to have been essentially focused on creating light and shadow with the brush in order to approximate the curved and hollow surface of the leaves. Wk
This sheet is most likely a study of butterbur leaves. Cuyp made it during a drawing campaign in which he produced various detailed studies of nature. In the treatment of the ground, dimensions, and technique — especially the application of color — this and the following drawing are virtually identical. Both undoubtedly came from the same sketchbook, one which the artist was using about 1640 and which may have contained landscape and animal studies as well (see cats. 53, 61–63, 96–98, 101, 102).

Cuyp must have made these studies for the sake of his paintings. The outlines of the two leaves jutting up occur in his view of cows near a river in Petworth. However, the artist certainly must have used the complete image of this splendid combination of dense vegetation and a few projecting leaves as a repoussoir in one of his paintings.
In this drawing, which is very close to the previous sheet, Cuyp depicted several large, broad leaves, presumably butterbur, with curly sorrel rising behind it in the middle and to the left. The artist created a convincing impression of a patch of vegetation growing near a ditch. Cuyp first drew the plants in black chalk and subsequently defined them with the point of the brush, often in very fine lines. He then applied shadows, washing with the brush. Finally, he introduced subtle yellows and greens, while accenting the sorrel at the upper left with a bit of red brown. He finally deepened the dark areas with gum arabic. In terms of technique, the drawing corresponds closely with Cuyp’s early work and, like his early, colored landscape drawings, was probably made in about 1639/1640.

Cuyp incorporated this delightful and apparently spontaneous study with great accuracy in his landscape painting with cattle and a farmhouse (cat. 10). \textit{WK
Three Cows near a Fence with Butterbur in the Foreground

black chalk, gray wash, watercolored in yellow and red, heightened with white, partly brushed with gum arabic, 14 x 19 (5 ½ x 7 ½). The British Museum, London (London, Amsterdam only)

- This is one of the earliest of Aelbert Cuyp’s many drawings of cows. In format, it corresponds with the early landscapes that the artist sketched near Dordrecht.¹

Although the drawing still exhibits some awkwardness — the two cows at the right are not well proportioned with respect to one another — Cuyp nevertheless demonstrated greater control of the cattle than in his earliest work, the 1639 Landscape with Cattle in Besançon.² In presentation, the cows and vegetation are very close to those in A Farm with Cottages and Animals (cat. 10) dating from the early 1640s.

The depiction of the butterbur in this drawing recalls the work of Abraham Bloemaert, whose predilection for humble farmhouse nooks Cuyp would have known through his father, Jacob Gerritsz Cuyp, who had studied with the Utrecht master. With this drawing Aelbert Cuyp also commented on his father’s work — his cows and other cattle, often in artificial poses, were published by Visscher in 1641 in Diversa animalia.³
A Horse near the Bank of a River with Two Moored Rowboats

The artist successfully integrated the horse and the boats into the landscape, which also consists of a wide prospect suggested by the distance to the opposite side of the river and by the far view at the right.

Cuyp derived the motif of the horse half turned to the viewer from his father’s engraved series of animal studies, *Diversa animalia*. The entirely natural setting, undoubtedly located in the vicinity of Dordrecht, is Cuyp’s own contribution. As a study of cattle along the shore, this early composition dating from about 1640 anticipates Cuyp’s impressive paintings of cows near the water (for instance, cats. 21 – 23), in which, however, all distracting elements are suppressed.

Comparable, though not entirely similar horses occur in a few of Cuyp’s paintings. The relationship of the horse to the bank in this drawing corresponds closely to that in Cuyp’s painting of a horseman and shepherds with the ruins of the Huiste Merwede in the background (*The National Gallery, London*). The sky has been heightened with white, probably to mask a few stains, now again clearly visible.

- In addition to his careful and concentrated studies of cattle—horses, cows, sheep—Cuyp occasionally depicted animals in their natural surroundings. Here, a horse stands near the water’s edge, with trees and a house on the opposite shore. Next to the very irregular quayside, two rowboats are moored near two poles stuck in the riverbed.

black chalk, brush and gray ink, watercolored in brown and green, heightened in gray and white, traces of gum arabic at the lower right, 13.6 × 19.1 (5 ¾ × 7 ½). Staatliche Museen zu Berlin, Kupferstichkabinett (Washington, Amsterdam only)
In this sheet Cuyp made two studies of a lean horse. A summary study of a dog at the right, perhaps initially intended to establish the right horse in a setting, was erased by the master himself. The two horses differ not only in the extent of foreshortening, but also in conception. The left one was initially defined in linear terms: one sees the parallel lines so characteristic of Cuyp, for instance, near the ribs and in the neck. Subsequently, the artist smudged the chalk a bit to achieve clearer volume. The subtle handling of the chalk is especially evident in the lines in the stomach region and in the rendering of hair on the legs. Light and shadow are only indicated on the ground, where their sole purpose is to anchor the animal. The study at the right is a classic exercise in foreshortening, similar to those made by other draftsmen at the time, including Pieter van Laer and Karel Dujardin. However, it also represents an attempt to suggest volume and light and dark, particularly in the flank and hindquarters. Cuyp again elaborated the sketch at the right in a drawing in the Collection Frits Lugt, Institut Néerlandais, in Paris (cat. 100), and he included the left horse in a painting in Karlsruhe.
When Cuyp combined animals in his drawings, he sometimes devised compositions with groups, such as the flocks of sheep or cows in Berlin. In sketching these two animals, however, he utterly disregarded their placement vis-à-vis each other, perhaps because he was intent upon pursuing other aims. With regard to the cow, he carefully and precisely defined its volumes with parallel lines. For the horse, he suggested the effect of light and shadow with a broad wash, placing great emphasis on the shadow on the ground. The same horse, comparable in shape down to the smallest detail, appears in another of Cuyp’s drawings (cat. 99). While light and dark receive priority in both sheets, here this effect received even greater emphasis. After jotting down a few pencil lines as orientation, he proceeded to execute the drawing in brush with great bravura.

In slightly altered form, both the cow and the horse reappear in the monumental River Landscape with Horsemanship and Peasants in the National Gallery, London (cat. 45). The cow, with an identical dappled brown marking on its head, is partly concealed by a piebald cow. The horse has a slightly different stance and its head is a bit more raised; however, the left hind flank is the same. With these slight adjustments, Cuyp transformed the weary cart horse in the drawing into the proud gray steed in the painting.
A fairly large number of Cuyp's drawings of animals, including cows, sheep, horses, and a dog, have been preserved. This group, though, is problematic, for Cuyp has been renowned as one of the foremost specialists in the depiction of livestock since the early nineteenth century, and many animal studies have been wrongly attributed to him. Moreover, a number of his drawings have been worked up, copied, and even forged.

This *Cow Standing* must have been made fairly early in Cuyp's career, a dating indicated by the meticulous delineation of the contours and the still hesitant parallel inner lines, particularly distinct in the animal's neck. Nevertheless, with this direct portrayal, Cuyp clearly distanced himself from his father's animal studies, such as those found in *Diversa animalia*, in which Jacob tried to create interesting, though artificial and somewhat mannered, images.

The *Cow Standing* occurs in virtually the same pose — though the left front leg has been altered to suggest a walking motion — in the *Stable Interior* in Stockholm. A comparison of these works reveals that the illumination from behind was essential to Cuyp, who apparently changed the cow's markings in the painting to create contrast in the dark stable.
black chalk, gray wash, watercolored in brown, 13.6 x 18.1 (5 ¾ x 7 ¼). Amsterdams Historisch Museum (Washington, Amsterdam only)

While in *A Cow Standing* (cat. 101), the artist primarily delineated form by means of light, in this sheet he focused on rendering the animal’s fur. However, the still somewhat hesitant shape of the hoofs and the shadow cast by this young bull are similar to those in the preceding drawing, as is the definition of its outline, which is sporadically interrupted by upright strokes for the hair of the fur. The markings — here in the neck, and on the hindquarters in the cow drawing — are also similarly indicated. Cuyp extensively elaborated the bullock drawing, even adding brown watercolor. In the use of color, the drawing recalls Cuyp’s early landscape sketches made in the vicinity of Dordrecht, and therefore probably also dates from about 1640. The application of color brings to mind the work of Cornelis Saftleven, who, perhaps influenced by Abraham Bloemaert, used color in his animal drawings of the 1630s. WR
Here, Cuyp's mastery in depicting cattle at rest is shown at its best. No traces remain of the wavering, nervous drawing style that distinguished the artist's earlier cattle studies. The artist betrayed only a hint of hesitation in searching for the proper contour, particularly along the animal's back. The delineation of the fur and the fall of light over the cow's body, however, demonstrate Cuyp's great accomplishments as a draftsman of cattle. With summarily indicated vegetation and fleetly and convincingly placed shadows, the artist evoked a setting for the animal.

While cows in this position already occur in Cuyp's early work, the drawing's genesis may nevertheless be assumed to be later. The serenity of the cattle in a landscape or near water, such an essential element in Cuyp's more mature paintings, is something he must have discovered through this or similar drawings. Although we have no specific clues, a dating of about 1650 for these more mature studies may be surmised.

The most important reverberation of this study is found in the River Landscape with Horseman and Peasants (cat. 45).
A Dog Lying Down

black chalk, gray wash, watercolored in very light green, 7.1 × 14.3 (2¾ × 5¾). Graphische Sammlung Albertina, Vienna (London, Amsterdam only)

• Although Cuyp seemingly drew this dog from life, he nevertheless based its pose on models favored by his father, whose mannered studies of animals (for example, the goat at the left in fig. 1) are often shown from an unusual vantage point.\(^1\) However, this sheet is so naturally elaborated and aptly observed that Aelbert Cuyp probably was unaware of his reliance on a formula inherited from his father’s repertoire. In this drawing, Cuyp concentrated on the depiction of the fur — particularly difficult to capture with its short, sturdy curls — and on the effect of light, which he primarily achieved by applying gray to black ink with the brush. Cuyp’s rendering of the dog’s strained pose is also extremely effective.

Cuyp used this sketch for various paintings, particularly his *Orpheus Making Music for the Animals* in a private collection, which must have been executed about 1645, and a painting with a Moorish page in the Royal Collection, London, from the late 1640s.\(^2\) wk
Cuyp’s figure studies represent a problematic group in his oeuvre. Though many of the drawings attributed to the master can be linked to his paintings, some create the impression of having been worked up or provided with rural surroundings by a later hand. Other figure drawings have been associated with Cuyp’s early nineteenth-century followers, particularly Jacob and Abraham van Strij.1 While the sophistication of some of the doubted drawings seems rather nineteenth century, here the almost naive simplicity and the hesitant seeking for proper form pleads for authenticity.

Cuyp used the sketch for a composition from the mid-1640s, in which two shepherds with staffs try to restrain a recalcitrant goat.2 In this drawing, Cuyp chiefly attempted to capture the movement of a shepherd stepping forward with a compelling gesture of his staff. The sheet is also a study in light and shadow. Only the cheeks and chin of the shepherd’s face catch the light. Cuyp emphasized the folds of his clothing and the shadow of his right hand. The exploration of form in this sketch is clearest in the hesitant definition of the boots, beautifully illustrating the creative moment. wk
Two Resting Shepherds

black chalk, gray wash, brushed with gum arabic in the foreground, 10.9 × 16.8 (4 3/16 × 6 5/16).

Collection Frits Lugt, Institut Néerlandais, Paris (Washington only)

These two figures are unusually positioned in the landscape, with the shepherd at the left seated so that only the upper part of his body is visible to the viewer. Nevertheless, they are depicted with a good sense of balance, their forms related through the parallelism of their staffs. A distant view with a church tower can be seen between them. Cuyp used these figures independently in paintings. He introduced the left figure, submerged in the landscape as it were, in a painting in a private collection.¹ There, too, the shepherd is similarly involved in silent communion with a standing shepherd, a study of whom has also been preserved.² He included a comparable figure in a somewhat later painting (cat. 14), though it leans back more and is without a staff. The right figure, too, served as a preliminary study for a shepherd in a cattle painting near Utrecht of about 1645.³ WK
A Milkmaid

black chalk, gray wash, some pencil, 12.1 × 14.8 (4 ¾ × 5 3/16). The J. Paul Getty Museum, Los Angeles (Washington, Amsterdam only)

In this sheet, Cuyp splendidly observed the pose and the fall of light on the folds of the clothing of the seated milkmaid. All one sees of the cow is the outline of its udder, stomach, and legs, a summary indication of the cow’s body that Cuyp used to determine the position of the girl. As a result, he also accentuated — perhaps unintentionally — the contrast in size between the small girl and the large cow.

Cuyp included the milkmaid in various paintings, the closest and the earliest being the girl in a work in Rotterdam (fig. 1). This painting evinces marked similarities with works from the master’s middle period — such as a preference for brown tones and sharply delineated figures — and must therefore be dated shortly after 1645. However, its attribution is not beyond doubt. In other works featuring the milkmaid, the master was already fascinated by the possibilities of late afternoon sunlight.

The drawing originally belonged to a group of figure studies in the Dupper Collection in Dordrecht. The notable influence of some of these drawings on the Van Strij brothers makes it tempting to believe that this group had been accessible to these artists, who played such an important part in the Cuyp revival in about 1800. WK
108 Portrait of a Twenty-Nine-Year-Old Man 1646, pen and brush and gray ink on white prepared parchment, heightened with white, 20.8 × 16.5 (8 7/8 × 6 1/2). Staatliche Museen zu Berlin, Kupferstichkabinett (Washington, Amsterdam only)

109 Portrait of a Twenty-Three-Year-Old Woman 1646, pen and brush and gray ink on white prepared parchment, heightened with white, 20.6 × 16.3 (8 1/4 × 6 1/4). Staatliche Museen zu Berlin, Kupferstichkabinett (Washington, Amsterdam only)
Although the compositions of these two miniature-like portraits of a twenty-nine-year-old man and his twenty-three-year-old wife belong to a long tradition, Cuyp nevertheless drew them in a highly personal fashion. Small portraits in an oval stone opening, sometimes with a pronounced trompe l'oeil effect, appeared in Holland as early as 1626 in Frans Hals' portrait of Petrus Scrivierius. In 1646, the very year that Cuyp executed these works, Rembrandt created a comparable and even more daring effect in his portrait etching of Jan Cornelis Sylvius.

In the seventeenth century, many artists attempted to draw “little paintings” by using fine penwork on parchment, an art form the Germans call Federkunststück. In the Dutch portrait tradition, David Bailly (1584–1657) in particular contributed significantly to this manner of working. As a painter of small portraits, he seems to have been important for an unidentified Dordrecht painter, whose set of seven portraits of a family dated 1632 proves that Cuyp’s two portraits are closely related to the portrait tradition of his hometown.

Cuyp was able to infuse these two small portraits with the same vigor he gave his painted life-size portraits (see also cats. 26, 27). He himself was twenty-six years old when he recorded these delicate likenesses. The exceptional immediacy of his portrayals, which to some critics indicated that they were Cuyp and his wife, makes it very likely that the artist depicted relatives or good friends. Only one other drawn portrait by Cuyp is known, the portrait of Andreas Colvius, whose execution is somewhat freer but which nevertheless attests to the same direct, personal observation. A print was made of the latter portrait in 1646, suggesting that the drawing also dates from that year.

Literature
Endnotes
1. Strip affixed to the top must be an autograph addition.
2. For instance, Cupp could have seen the chalk drawing that preceded Saenredam’s meticulously worked out sheet, or a copy of it.
4. Saenredam corrected this passage in the painting dating from 1659 in the Mauritshuis, The Hague; see Utrecht 2000, no. 3.

47
The Mariakerk in Utrecht from the Northwest
black chalk, gray wash, watercolored in green, yellow, and brown, heightened with white, yellow, and pink, partly brushed with gum arabic, 19.1 × 30.7 (7 5/8 × 12 3/8). Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main (4 356)
Inscription
Lower right (annotated in pen and brown ink): A.C.
Provenance
Possibly D. Versteegh; R. W. P. de Vries; (C. G. Boerner, Düsseldorf, 1971). Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main
Literature
Van Gelder and Jost 1969, 101, 102, fig. 10; Salomonson 1983, 98, 100, fig. 68; Chong 1992, 276, 283

48
The Buurkerk in Utrecht in Rural Surroundings
black chalk, gray wash, watercolored in gray-green, white, and gray-green bodycolor, pen and brown ink, partly brushed with gum arabic, 18.4 × 30.5 (7 3/4 × 12). Mrs. Edward Speedman
Inscription
Upper right (in pen and brown ink): de Buurkerk; lower right (annotated in pen and brown ink): A.C.
Provenance
P. Caloen Wenz; D. baron van Leyden. A. W. M. Mensing; private collection
Exhibitions
Literature
Endnotes
1. This drawing is in Berlin. See Bock and Rosenberg 1930 (inv. no. 5856).

49
Utrecht with the Vecht River and the Pellekussenpoort
black chalk, gray wash, watercolored in green, traces of pen and gray ink and some white bodycolor, 17.6 × 30.7 (6 3/4 × 12 1/4). Staatliche Museen zu Berlin, Kupferstichkabinett (5854)
Inscription
Lower right (annotated in pen and brown ink): A.C.
Provenance
M. D. Collection; A. von Beckerath, Berlin; Staatsliche Museen zu Berlin, Kupferstichkabinett, 1902
Literature
Bock and Rosenberg 1930, I: 113, no. 5854; Van Gelder and Jost 1969, 102, 103, fig. 5; Van Gelder and Jost 1972, 238, note 24; Chong 1992, 276
Endnotes
1. Van Gelder and Jost 1969. They based their theory on a statement by J. Graafhuis. See also Stechow 1938.

50
Four Trees near a Fence
black chalk, gray wash, watercolored in brown and green, partly brushed with gum arabic, 18.8 × 30.8 (7 3/4 × 12 1/4). The Metropolitan Museum of Art, New York, Rogers Fund, 1907
Provenance
(Frederik Mulles, Amsterdam, by 1907); The Metropolitan Museum of Art, New York, 1907
Exhibitions
Poughkeepsie 1976, no. 47
Literature

Endnotes
1. This drawing was, unfortunately, stolen some years ago. Cuyp used a significant part of the latter sheet as well as a view of the Mariakerk (cat. 47) for his painting in Salzburg (cat. 5).
2. Cuyp used this drawing for the background in a painting by Jacob Gerritsz Cuyp of 1641 (see cat. 3, fig. 1).

51
The Edge of a Woods with Travelers

Provenance
Miss Seymour; F. Koenigs; gift D.G. van Beuningen to the Foundation Museum Boijmans, 1940

Exhibitions
Rotterdam 1934, no. 45; Rotterdam 1938, no. 257; Braunschweig 1948, no. 6; Leningrad, Moscow, and Kiev 1974, no. 66; Paris 1974, no. 17; Dordrecht 1977, no. 49.

Endnotes

52
Path between Trees
black chalk, gray wash, brushed with gum arabic, 17.7 × 29.5 (6 2/8 × 11 3/8). Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main (1724)

Provenance
Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main, by 1862

Endnotes

53
A Path at the Edge of a Woods with Two Old Oak Trees
black chalk, gray wash, watercolored in yellow, partly brushed with gum arabic, 13.8 × 19.3 (5 3/4 × 7 3/4). The British Museum, London (1910.2.18.2)

Inscription
Lower middle: A. C. 1

Provenance
Miss M. Hoofman; G. Leembruggen Gzn; Benoit Coster; A. G. de Visser; W. Pitcairn Knowles; Mrs. Robert Low; The British Museum, London, 1910

Exhibitions
London 1912, no. 171

Literature
Hind 1915 – 1932, no. 1; Mellaart 1926, 21, 35; Chong 1992, 254, 262; Broos 1993, 71

Endnotes
1. Cuyp may have seen this view from the westernmost islands in the Holland and Zeeland delta. A drawing by Roelant Roghman, Bowerama with the Fortress of Oostvoorne (The British Museum, London; ill. in Van der Wyck 1989 – 1990, 11, no. 146) shows us that this combination of dunes, trees, and majestic panoramas in this area is within the realm of possibility.
2. Illustrated in Dordrecht 1992, no. 15.

55
A Weather-Beaten Oak Tree
black chalk, gray wash, some graphite, heightened with white and yellow, partly brushed with gum arabic, 15.3 × 19.6 (6 × 7 3/4). Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main (3723)

Provenance
Graphische Sammlung im Städelisches Kunstinstitut, Frankfurt am Main, by 1862

Literature
Frankfurt 1994, 140, no. Z60; Frankfurt 2000, 180, no. 78

Endnotes
56
Three Trees in Hilly Terrain
black chalk, gray wash, watercolored in yellow-green, 18.1 x 14.6 (7 ¾ x 5 ¾). Staatliche Museen zu Berlin, Kupferstichkabinett (8505)

Provenance
Probably D. baron van Leyden; C. E. von Liphart; Rudolph P. Goldschmidt. Staatliche Museen zu Berlin, Kupferstichkabinett (anonymous gift), 1917

Literature
Kunstchronik 1918, 309; Bock and Rosenberg 1930, i: 112; Wegner 1973, 73; Chong 1992, 276

57
A Wide Plain, Low Trees in the Foreground
black chalk, gray wash, watercolored in ochre yellow, partly brushed with gum arabic, 19 x 31 (7 ½ x 12 ½). The British Museum, London (1880.10.9.28)

Inscription
Lower right (in pen and brown ink): A.C.

Provenance
Sir William Worsley, Bt.; The British Museum, London, 1880

Literature
Hind 1915–1932, no. 5

58
Panorama with a Country Manor
black chalk, gray wash, watercolored in ochre, yellow, and blue, partially brushed with gum arabic, 18.7 x 30.3 (7 ¼ x 11 ¾). Graphische Sammlung Albertina, Vienna (8755)

59
A Manor House among Trees, High Hills in the Distance
black chalk, gray wash, watercolored in brown-green, locally brushed with gum arabic, 18.3 x 42.1 (7 ½ x 16 ½). Staatliche Museen zu Berlin, Kupferstichkabinett (5443)

Inscription
Lower left (annotated in pen and brown ink): A:Kuip

Provenance
A. von Beckerath; Staatliche Museen zu Berlin, Kupferstichkabinett, 1902

Exhibitions
Berlin 1974, no. 41

Literature
Bock and Rosenberg 1930, i: 112; Lugt 1931, 44; Wegner 1973, 73

60
Peasant Carts near a Farmhouse in a Dune Landscape
black chalk, gray wash, watercolored in yellow and brown, partly brushed with gum arabic, 12.4 x 18.9 (4 ¾ x 7 ¾). Graphische Sammlung Albertina, Vienna (8694)

Provenance
Duke Albert of Saxe-Teschen. Graphische Sammlung Albertina, Vienna

61
The Windmills at Kinderdijk (recto); The Grote Kerk in Dordrecht from the Southwest (verso)
black chalk, gray wash, watercolored in brown and red, heightened with white, 13.7 x 18.9 (5 ½ x 7 ½). Private collection, U.S.A.

Inscription
Verso (in pen): N:1944 (Goll’s inv. no.)

Provenance
Jhr. J. Goll van Franckenstein; Dr. F. Heimsoeth, Bonn; C. Schoeffer; private collection

Exhibitions
Poughkeepsie 1976, no. 45

Literature
Burnett 1969, 372–373; Chong 1992, 281

Endnotes
1. In addition to landscapes (cats. 62, 63), a number of sheets with about the same format with other subjects can be mentioned (compare, for instance, cats. 96, 98, 101, 103).
62

Noored Rowboats on a River, a Church in the Distance

black chalk, gray wash, watercolored in brown, pink, green, and yellow, heightened with white, partly brushed with gum arabic, 14.1 × 19.4 (5 5/16 × 7 5/16). Private collection, The Netherlands

Provenance
Jhr. J. Goll van Franckenstein; Jhr. Mr. J. A. Repelaer; Dr. A. Schwarz; private collection

Exhibitions
Amsterdam 1968 (Schwarz Coll.), no. 31, fig. 91; Cambridge and Montreal 1988, no. 201; Dordrecht 1991

Literature
Van Gelder and Jost 1972, 227, 236, note 4; Chong 1992, 285; Broos 1993, 71; Beresford 1998, 81

Endnotes
1. See Beresford 1998, 80.

63

Boats at a Pier on a River

black chalk, gray wash, graphite, pen and brown ink, heightened with white, partly brushed with gum arabic, 14.6 × 19.5 (5 5/8 × 7 5/8). Rijksmuseum, Amsterdam (RP-T-1967-90)

Provenance
Jhr. J. Goll van Franckenstein; Jhr. Mr. J. A. Repelaer; Rijksmuseum, Amsterdam, 1967

Exhibitions
Dordrecht 1977, no. 45; Amsterdam 1987, no. 37

Literature
Chong 1992, 275, 354; Broos 1993, 71

Endnotes
1. As to the odd line in the water, here Cuyp initially may have had a reflection in mind, similar to that of the long stick resting on the afterdeck of the boat at the right.

2. Cuyp elaborated the motif of the jetty in a second drawing, in which a mill dominates at the right. That drawing served as the point of departure for an early painting, in which the bank in the left background from the drawing under discussion has been incorporated; see Reiss 1975, 49, no. 21, for both drawing and painting.

64

Country Road with a Cottage alongside a River

black chalk, gray wash, watercolored in green and yellow, 18.8 × 30.3 (7 1/4 × 11 1/2). Kunstsammlungen zu Weimar (KK 4883)

Inscription
Lower right (with the tip of the brush in brown ink): A.C.

Provenance
J.G. baron Verstolk van Soelen; Leembruggen; Dr. F. Heimsoeth; Carl Ruland; Kunstsammlungen zu Weimar

Exhibitions
Weimar 1981, no. 162

Literature
Chong 1992, 280

65

A Windmill and Farm Buildings beyond Meadows
black chalk, gray wash, partly brushed with gum arabic, 18.3 × 30.4 (7 1/4 × 11 5/8). Statens Museum for Kunst, Copenhagen (11 538)

Inscription
Lower left (with the tip of the brush and brown ink): Coninglooven’[E]l Spence’s collector’s mark

Provenance
Nicola Francesco Haym; Earl Spencer; Jhr. J. Goll van Franckenstein; Isendoorn à Blois; W. van Gogh; V. d. Kock; Weber; W. Pitcairn Knowles; R. P. Goldschmidt; De Robiano; Dr. C. Orto; C. Hofstede de Groot. Ny Carlsberg-fondet; Statens Museum for Kunst, Copenhagen, 1931

Exhibitions
Copenhagen 1952, no. 409

Literature
Fisher and Sthyr 1943, 60, 102; Van Gelder and Jost 1969, 100, note 13; Te Rijdt 2000, 152, fig. 221

Endnotes
1. The inscription has also been read as Tongerloo. The drawing can in no way be connected to any of the artists from the Coninloo family. The landscape recalls Holland in all respects and is completely unrelated to the Kempen countryside around Tongerloo in the Southern Netherlands.

66

A Dike alongside a River, a Bridge, and Trees to the Right
black chalk, gray wash, partly brushed with gum arabic, 18.4 × 30.5 (7 1/4 × 12). The British Museum, London (1836.81.97)
Provenance
J. Sheepshanks; The British Museum, London, 1836

Literature
Hind 1915 – 1932, 69, no. 9; Burnett 1969, 372; Reiss 1975, 46; Chong 1992, 282

Endnotes
1. This drawing has been connected with Cuyp’s painting in Frankfurt (Reiss 1975, no. 18), a painting, however, which follows a drawing now in Hamburg.

67
A Village near a Bridge
black chalk, gray wash, watercolored in yellow; brown, and green, partly brushed with gum arabic, 18.3 x 30.6 (7 1/8 x 12 1/8). Staatliche Museen zu Berlin, Kupferstichkabinett (5208)

Provenance
A. von Beckerath; Staatliche Museen zu Berlin, Kupferstichkabinett, 1902

Literature
Bock and Rosenberg 1930, 111; Hind, no. 5208; pl. 84; Van Gelder and Jost 1969, 100, note 12; Munich and Bonn 1993, 112, note 5, 6

70
River Landscape
black chalk, gray wash, watercolored in red-brown, yellow, and green, 18.9 x 30.3 (7 1/8 x 12 1/8). Musées Royaux des Beaux-Arts de Belgique, Brussels (4060 / 974)

Provenance
Probably J. G. Baron Verstolk van Soelen; Jacob de Vos Jbn; De Grez Collection; Musées Royaux des Beaux-Arts de Belgique, Brussels, 1913

Exhibitions
Rotterdam 1954, no. 61; Manchester 1976, no. 63

Literature
De Grez 1913, no. 974; Amsterdam 1999, 51

Endnotes
1. The drawing of the same subject in Weimar (Amsterdam 1999, 50, 51) is evidently a copy.

71
Amersfoort Viewed from the Southeast
black chalk, gray wash, watercolored in yellow; brown, and green, 19 x 30.4 (7 1/8 x 12 1/8). Collection Frits Lugt, Institut Néerlandais, Paris (744)

Inscription
Lower right (annotated in pen and brown ink): A. Cuyp

Provenance
John, Lord Northwick; Capt. E. Spencer-Churchill; F. Lugt, 1921; Collection Frits Lugt, Institut Néerlandais, Paris

Exhibitions

Literature
Van Gelder 1959, 28, fig. 93; Van Hasselt 1964, 374 – 375

Endnotes
1. The tower continued to stand on its own after the church was demolished in 1787.
2. Other buildings were also identified in Brussels, Rotterdam, Paris, and Bern 1968 – 1969, 37.

72
Dordrecht Viewed from the East
black chalk, gray wash, watercolored in yellow and red, partly brushed in gum arabic, 19 x 44.5 (7 1/8 x 17 1/8). Rijksmuseum, Amsterdam (RPT-1897-A-3393)
Exhibitions
Cambridge 1948, no. 40; Poughkeepsie 1976, no. 50; Tokyo 1979, no. 59; Cambridge and Montreal 1988, no. 22

Literature
Endnotes
1. Elen 1989, 234, no. 475, not illustrated. The View of Rhenen in Berlin (inv. no. 1170, see Bock and Rosenberg 1930), is an autograph repetition of the view in the Teylers Museum.

73
Rhenen Viewed from the Northeast
black chalk, gray wash, watercolored in yellow and brown, partly brushed in gum arabic, 17.9 × 50 (7 ¼ x 19 ¾). Fogg Art Museum, Harvard University Art Museums, Cambridge, Gift of John S. Newberry Jr., given in honor of Paul J. Sachs’ 70th birthday (1949.33)

Provenance
H. Wellesley; Henry Adams; Mrs. Arthur Adams; John S. Newberry Jr.; given to Fogg Art Museum, Harvard University Art Museums, Cambridge, by the latter in commemoration of Paul J. Sachs’ 70th birthday, 1949

74
Arnhem Viewed from the West
black chalk, gray wash, watercolored in ochre yellow, partly brushed with gum arabic, 19 × 48.6 (7 ½ × 19 ¼). Rijksmuseum, Amsterdam (RP-T-1900-A-4179)

Inscription
Lower left (annotated in pen and brown ink): A.Kuij; upper left (in pen and brown ink): Arnhem

Provenance
Rijksmuseum, Amsterdam, 1900

Exhibitions
Brussels, Amsterdam, and Hamburg 1961, r. 105; Dordrecht 1977, no. 67; Amsterdam 1987, no. 39

Literature
Boon 1955, 149; Poughkeepsie 1976, 64; Plomp 1997, 121
Endnotes
1. The church tower was fitted out with an octagonal lantern in 1651, an element thus missing in this sheet. For the identification of the buildings, see Dordrecht 1977, 166. There they are identified as follows, from left to right: the peak of the Sint Nicolaaskerk, the church of the Sint Agnietenconvent, the Sint Janskerk, and the Sint Janspoort; behind it are the towers of the Sint Walburgskerk, the Grote Kerk, and then possibly the tower of the Observantenklooster and perhaps the roof of the Sint Pietersgasthuis.
2. Dordrecht 1977, 166.
3. In its finish, this drawing is very close to a view of Harderwijk, also in Amsterdam (inv. RP-T-1950-418).
76
Calcar with Monterberg in the Distance
black chalk, gray wash, watercolored in green and ochre yellow; partly brushed with gum arabic, 18.5 x 49.5 (7 1/4 x 19 1/3). The Metropolitan Museum of Art, New York, Promised gift of an anonymous donor

Inscription
Lower right (annotated in pen and brown ink): A. Kuip

Provenance
E. Cichorius; Oskar Huldenschinsky; Siegfried Kramarsky; private collection; The Metropolitan Museum of Art, New York, Promised gift of an anonymous donor

Exhibitions
Brussels 1937–1938, no. 54; Düsseldorf 1953, no. 21; New York 1959, no. 47; Poughkeepsie 1976, no. 46

Literature
Dattenberg 1941; Henkel 1942, 14; Bolten 1967, 52; Dattenberg 1967, 80, no. 90; Brown 1979, 6, 7; Amsterdam and Washington 1981, 120; Schoon and Voorsteegh 1991, 6, 13; Chong 1992, 354, 374

Endnotes
1. Black chalk and watercolor, 18.5 x 48 centimeters, Rijksprentenkabinet, Rijksmuseum, Amsterdam; see Amsterdam 1987, no. 41.

77
Panorama with a Shepherd Surveying the Landscape
black chalk, gray wash, 18.4 x 48 (7 1/3 x 18 3/4). Rijksmuseum, Amsterdam (RP-T-1961-69)

Inscription
Lower left (annotated in pen and brown ink): A. Kuip

Provenance
Palmerston Collection; Sir James Knowles; Henri Duval, by 1910; A. von Beckerath; Edw. Czeczowicz; Mr. and Mrs. I. de Bruijn-van der Leew; bequeathed to Rijksmuseum, Amsterdam, 1949, received 1961

Literature

Endnotes
1. Dattenberg denied that the motif stemmed from the vicinity of Calcar and Cleves. The distant hills actually also preclude Rhenen or Wageningen.
2. Reiss 1975, no. 126.

78
The Hague Viewed from the Northwest
black chalk, gray wash, watercolored in yellow and green, 18.6 x 49.4 (7 1/8 x 19 3/8). Rijksmuseum, Amsterdam (RP-T-1900-A-4379)

Inscription
Upper left (in pen and brown ink): 3 Gravenhagen; lower left (annotated in pen and brown ink): A. Kuip

Provenance
Rijksmuseum, Amsterdam, 1900

Literature
Dumas 1991, 142, 144, note 13

Endnotes
1. The two drawings of Scheveningen are in the Gemeente Archief, Dordrecht, and the Museum Boijmans Van Beuningen, Rotterdam; ill. in Dordrecht 1977, nos. 52 and 57. See also Dumas 1991, 275–277, 450.
2. On the topography, see Dumas 1991, especially no. 7.

This place was later called Bij de Westermolen (near the Westermolen). These mills are handsomely depicted in a drawing by Joris van der Haagen in the Gemeent Archief, The Hague. See Dumas 1991, 141, fig. 1.

3. Smaller than most of Cupp’s panoramas, given the fold at the right, this drawing may have originally been the same size. This reduction could have been effected by the artist himself, even though the cropping at the top is certainly later in date.

4. The View of Leiden is in Amsterdam; see Amsterdam 1987, no. 38. The View of Haarlem is in the Teylers Museum, Haarlem; see Plomp 1997, no. 102.

5. Amsterdam and London 2000, no. 39. The assumption that this etching along with B. 225 and 226 together constituted a single panorama (Amsterdam and London 2000, 5, note 3) makes this comparison even more interesting.

79
Dunes with the Ruins of a Manor in the Distance
black chalk, gray wash, partly brushed with gum arabic, 19 x 30.2 (7 1/3 x 11 3/5). Rijksmuseum, Amsterdam (RP-T-1966-66)

Provenance
Ustinoff; (P. and D. Colnaghi); private collection, Germany; (C. G. Boerner, Düsseldorf); Rijksmuseum, Amsterdam, 1966

Exhibition
Dordrecht 1977, no. 53

Endnotes
1. While not contradicting this identification, the many lovely views of Ter Kleef, including those by Claes Jansz Visscher, Willem Buytewech, Pieter Saenredam, and Roelant Roghman, are not sufficiently conclusive.

80

Dordrecht Viewed from the Northeast

black chalk, gray wash, watercolored in brownish yellow, partly brushed with gum arabic, 15.9 x 50.6 (6 1/4 x 19 3/4). Colnaghi, London

Inscription
Lower right (in brush and gray ink, erased): AC; and lower left (in pen and brown ink, erased): Anyp

Provenance
Henry Oppenheimer; S. Larsen-Menzel; H. L. Larsen; Eric H. L. Sexton, Rockport, Maine; private New England trust; Colnaghi, 2001

Exhibitions
London 1929, no. 565; Rotterdam 1938, r. 253; Montreal 1953, no. 141

Literature

Endnotes
1. There seems no reason to presume that Cuyp intended the drawing to be larger, as the sheet has not been cut down and the composition is carefully balanced with a *reposoir* in the middle of the foreground. The drawing has the same width as the largest of Cuyp’s panoramas.

3. Van Gelder and Jost 1972, fig. 3. This assumption has been doubted for two reasons (Chong 1992): the exception-ally wide painting, a panel more than 160 centimeters wide and twice as wide as high, would constitute an exception in the Dutch painting tradition. Moreover, the Leipzig panel is beveled on the left and right sides (the panel in Los Angeles is cradled). The beveling may also have been done after the paintings possible separation. Another possibility is that the paintings might also have been conceived as pendants.

81

The Groothoofdsport in Dordrecht from the West

black chalk, gray wash, 18.3 x 31.1 (7 3/4 x 12 3/4). Collection Frits Lugt, Institut Néerlandais, Paris (5258)

Provenance
Probably W. Mitchell, London; Téodor de Wyszewa; A. W. M. Mening; Frits Lugt, 1937; Collection Frits Lugt, Institut Néerlandais, Paris

Exhibitions
Dordrecht 1977, no. 65; London 1988, no. 1116; Paris 1989, no. 30, pl. 35

Endnotes
1. Cuyp portrayed this part of the town wall from the north in a sketchy section at the lower left in the view of Dordrecht in Amsterdam (cat. 84).
2. Reiss 1975, no. 110.

82

Dordrecht Viewed from the North, with a Windmill in the Foreground

black chalk, gray wash, watercolored with green, some brown chalk, 18.2 x 36.8 (7 3/4 x 14 1/4). The Metropolitan Museum of Art, New York, Robert Lehman Collection (1975.1.768)

Provenance
Misses Alexander, London; Robert Lehman, 1963; The Metropolitan Museum of Art, New York, 1975

Exhibitions
New York 1976, no. 3; New York and Evanston, 1988, no. 20

Literature
Van Gelder and Jost 1972, 227, 238, notes 19, 21; Reiss 1975, 117; Murray 1986, 48; Chong 1992, 467; Haverkamp-Begemann 1998, no. 60

Endnotes
1. Museum Boijmans Van Beuningen, Rotterdam, no. 2491. For the painting in Dulwich, see Reiss 1975, no. 80. For other variants, see Haverkamp-Begemann 1998.

83

Dordrecht Viewed from the North, with the Grote Kerk

black chalk, gray wash, 18.6 x 50.4 (7 3/4 x 19 3/4). Stichting Collection P. en N. de Boer, Amsterdam (188)

Inscription
Lower left (annotated in pen and brown ink): A.Cuyp fecit.; at the upper middle (in pen and brown ink): Dordrecht

Provenance
Baron W. A. van Itersum; C. Hofstede de Groot; P. de Boer, 1942; Stichting P. en N. de Boer, Amsterdam

Exhibitions
Leiden 1903, no. 58; Utrecht 1903, no. 44; Leiden 1916, n1, no. 20; The Hague 1930, no. 37; Laren 1966, no. 62; Dordrecht 1977, no. 64
84

Dordrecht Viewed from the North, with the Grote Kerk and the Groothoofdsport

black chalk, gray wash, 18.7 × 46 (7 ¾ × 18 ¼).
Rijksmuseum, Amsterdam (RP-T-1900-4376)

Inscription
Lower left (annotated in pen and brown ink): À Cuyp fecit;
upper middle (in pen and brown ink): Dordrecht
On the verso, Cuyp drew the top of a mast

Provenance
Rijksmuseum, Amsterdam, 1900

Exhibitions
Amsterdam and Toronto 1977, no. 61; Amsterdam 1987, no. 40

Literature

Endnotes
1. Cuyp adopted this boat wholesale in the painting in Kenwood (cat. 36). In the painting in Ascot (cat. 35), it shows up similarly as a pinnent, but he gave the boat a more western course to correspond with the other sailboats. This alteration in the composition also plays a role in the discussion of the chronology of the two paintings in Kenwood and Ascot. See Kloek 1977, 117 – 118.
2. For example, see cats. 91, 100, 106, 107.
3. See also the essay by Haverkamp-Begemann in this catalogue.

85

A Freight Boat and a Timber Raft on Calm Water

black chalk, gray wash, 16.8 × 25.4 (6 ½ × 10).
The British Museum, London (1895.9.15142)

Provenance
H. van Maarseveen; H. van Eyl Sluyter; Jhr. J. Goll
van Franckenstein; J.G. baron Verstolk van Soelen;
G. Leembruggen Jzn.; John Malcolm; The British Museum,
London, 1895

Literature

Endnotes
1. Van Gelder and Jost 1972 assume that Cuyp later applied the wash in the sail. The attempt to determine the shape of the masts and ropes indicates that Cuyp only later abandoned the idea of a ship under full sail.
2. Cuyp based the lion’s share of this composition (Moored Sailboats, Waddesdon Manor; Reiss 1975, no. 105) on his drawing, which was sold at Christie’s, 26 March 1963, no. 230.
3. Rafts, as depicted here, can be seen in a 1742 map by Isaac Tirion (ill. in Dordrecht 2000, 222). In Adam Wil- laerts’s enormous View of Dordrecht of 1639 (Wheelock essay, fig. 8), just such a raft is portrayed, presumably on its way to this destination. See also the drawings by Abraham van Strij (Dordrecht 2000, fig. 239, nos. 133, 134). Cuyp also rendered a lumber port west of Dordrecht in an early painting (Reiss 1975, no. 3).
Exhibitions
Paris 1970, no. 83

Literature
Lugt 1950, 17, no. 141; Stechow 1960b, 10, note 4; Brussels 1983, under no. 43, note 4; Lemmens 1984, 93, 122

Endnotes
1. The well-known Valkhof was not often portrayed from this vantage point probably because it was less recognizable from the northeast than from the northwest.
2. London (Sotheby’s), 23 March 1972, no. 17. In a sheet in Nijmegen he portrayed the Valkhof from the southwest, with the windmill on the Hubertustoren (in our sheet at the far right) figuring prominently in the foreground (Dordrecht 1977, no. 72).
3. See Poughkeepsie 1976, no. 49.

88
The Ruins of Ubbergen Castle
black chalk, gray wash, 18 × 27.1 (7 3/16 × 10 9/16). Graphische Sammlung Albertina, Vienna (8568)

Inscription
Lower middle (in pencil): A.Cuyper; upper middle (in pencil): Ubbergen; upper left (in pencil or black chalk): Nymans

Provenance
Charles, prince de Ligne; Duke Albert of Sax-Eisenach.
Graphische Sammlung Albertina, Vienna

Exhibitions
Vienna 1991, no. 60; New York 1995, no. 52

Literature
MacLaren 1960, 86; Reiss 1975, 175; Schulte 1983, 293–297; Chong 1992, 399; Dordrecht 1992, 131

Endnotes
1. Presently, the river is largely canalized; the countryside between Cleves and Nijmegen evidences numerous earlier riverbeds.
2. See the painting by Gerrit van Santen (Rijksmuseum, SK-A-3893) depicting the siege of this fort by Frederik Hendrik in 1636. The fort is depicted from the same direction in portraying the Elterberg. Van Santen was chiefly concerned with the recognizability of this location.

90
Cleves Viewed from the Galenberg
black chalk, pencil, gray wash, 19 × 27.8 (7 1/2 × 10 3/16). Rijksmuseum, Amsterdam (RP-T-100-106)

Inscription
Lower center (signed in pencil): A Cuyper lower left (in pencil): A Cuyper

Provenance
Rijksmuseum, Amsterdam

Literature
Gorissen 1964, no. 13; Dattenberg 1967, 77, no. 85; Goldner and Hendrix 1992, 224

Endnotes
2. The same manner of signing occurs in other sheets, for instance cat. 93.
4. A copy of this drawing is in Chantilly; see Dattenberg 1967, 78, 79, no. 86.

91
Calcar and the Monterberg Viewed from Cleves
black chalk, gray wash, 15.9 × 23.9 (6 1/4 × 9 3/16). Collection Groninger Museum, The Netherlands (1931-146)

Inscription
Lower left (annotated in pen and brown ink): A. Cuyper

Provenance
J. P. Heseltine, by 1913; C. Hofsèede de Groot Collection, 1913; bequeathed to the Groninger Museum, The Netherlands, 1914
Exhibitions
Dordrecht 1977, no. 70

Literature
Henkel 1916, 341; Dattenberg 1941, 43; Gorissen 1964, no. 20; Bolton 1967, no. 14; Wheelock 1995, 47

Endnotes
1. The complex shape of the linden may be seen to good advantage in a painted “portrait” by Pauwels van Hillegaert and a sketch attributed to Herman Saftleven. See Dattenberg 1967, nos. 263 and 325, respectively.
2. Lambert Doomer drew the ruins from close by, and he also drew Calcar from these ruins; illustrated in Gorissen 1974, 92 and 91, respectively.
3. Brooklyn Museum and Castle Howard; illustrated in Dattenberg 1967, nos. 72, 73.

92
The Rhine Valley Viewed from Nijmegen toward the Elberfeld

black chalk, brush, and gray ink, 15.4 × 24.7 cm (6 ⅛ × 9 ⅔). Staatliche Museen zu Berlin, Kupferstichkabinett (6661)

Inscription
Lower right, by a later hand in pen and brown ink: A. Cijp

Provenance
J.P. Heseltine; Amsler & Ruthardt, 1913; acquired for the Staatliche Museen zu Berlin, Kupferstichkabinett, 1913

Literature
Bock and Rosenberg 1930, 111

93
The Rhine Valley Stretching North toward the Elberfeld
black chalk, gray wash, pencil, 14.9 × 23.9 cm (5 ⅞ × 9 ⅜). Collection Frits Lugt, Institut Néerlandais, Paris (5304)

Inscription
Lower right (annotated in pen and brown ink): A. Cijp; to the right: A

Provenance
J.P. Heseltine; August Berg; F. Lugt; Collection Frits Lugt, Institut Néerlandais, Paris

Exhibitions

Literature
Bolten 1967, 54, note 1; Van Gelder and Jost 1972, 66;
Manchester 1976, 35; Chong 1992, 183; Wheelock 1995, 47

94
Study of Leaves, Possibly Rhubarb

pen and brown and gray ink, gray wash, traces of black chalk, 21.7 × 21.4 cm (8 ⅞ × 8 ⅜). Museum Boijmans Van Beuningen, Rotterdam (Cuyp 5)

Provenance
Possibly S. Woodburn; G. Leembruggen Jzn; Museum Boijmans Van Beuningen, Rotterdam, 1866

Exhibitions
Washington 1928, no. 87; Rotterdam 1960, no. 19; Brussels, Amsterdam, and Hamburg 1961, no. 103

Literature

Endnotes
1. Several of these attributions must be rejected, for example, the drawing on blue paper in the British Museum, London (Hind 1935–1932, no. 25, pl. XXXIX). The drawing in Dordrecht (Dordrecht 1977, no. 42) is very close to the one under discussion, but has rather atypical hatching in the shadows.
2. For instance, see the drawing in Yale (Haverkamp-Begemann and Logan 1970, no. 369, pl. 205; Reiss 1975, ill. on 27, 83, 87).
3. See Amsterdam 1993c, no. 318, among others. For the paintings, see for instance Roethlisberger and Bok 1993, nos. 444, 445, 448, 455, figs. 617, 618, 620, 629. See also Klock 1993, 102, 203, note 14; unfortunately, figs. 1 and 3 have been reversed.

95
Study of Leaves, Possibly Butterbur
black chalk, gray wash, watercolored in green and yellow, heightened with white, partly brushed with gum arabic, 14 × 19.4 cm (5 ⅜ × 7 ⅜). Collection Frits Lugt, Institut Néerlandais, Paris (101)

Inscription
Left of lower center (annotated in pencil): Acyp

Provenance
Possibly Ch. Fairfax Murray. (P. and D. Colnaghi, London); Frits Lugt, by 1923; Collection Frits Lugt, Institut Néerlandais, Paris

Exhibitions

Literature
Chong 1992, 302; Giltaij 2000, 78

Endnotes
1. Reiss 1975, no. 63.
96
Study of Plants, Possibly Sorrel and Butterbur
black chalk, gray wash, watercolored in red, yellow, and green, heightened with white, partly brushed with gum arabic, 14.6 x 19.3 (5 1/8 x 7 1/8). The British Museum, London (1865:14.828)

Inscription
Lower left (annotated in pencil): Avuy; upper right (in pen and gray ink): 44

Provenance
The British Museum, London, 1865

Exhibitions

Literature

97
Three Cows near a Fence with Butterbur in the Foreground
black chalk, gray wash, watercolored in yellow and red, heightened with white, partly brushed with gum arabic, 14 x 19 (5 1/2 x 7 1/8). The British Museum, London (Gg. 2-204)

Provenance
Rev. C. M. Cracherode; bequeathed to The British Museum, London, 1799

Literature
Hind 1915 – 1932, no. 33; Chong 1992, 267, 269, 274

Endnotes
1. The drawing, which was bequeathed to the British Museum along with a Village Scene (with virtually identical dimensions), is very close to cat. 64; see Hind 1915 – 1932, no. 10.
2. Reiss 1975, no. 1.

98
A Horse near the Bank of a River with Two Moored Rowboats
black chalk, brush and gray ink, watercolored in brown and green, heightened in gray and white, traces of gum arabic at the lower right, 13.6 x 19.1 (5 1/8 x 7 1/8). Staatliche Museen zu Berlin, Kupferstichkabinett (6854)

Inscription
(Annotated in pen and black ink): A.C.

Provenance
J. Goll van Franckenstein; H. van Cranenburgh; Schneider; Staatliche Museen zu Berlin, Kupferstichkabinett, 1913

Literature
Bock and Rosenberg 1930, 1: 113; Wegner 1973, 73; Chong 1992, 379

Endnotes
1. Illustrated in Reiss 1975, 30.
2. See Reiss 1975, 90.

99
Two Studies of a Horse
black chalk, 12.7 x 17.7 (5 x 6 1/2). Collection of Maida and George Abrams, Boston

Provenance
Verryn Stuart Family; Maida and George Abrams, Boston, 1996

Literature
Dordrecht 1977, no. 66

Endnotes
2. Lauts 1973, 89.

100
Studies of a Cow and a Horse
black chalk, brush in gray wash, traces of pencil, 8.4 x 12.5 (3 1/4 x 4 1/2). Collection Frits Lugt, Institut Néerlandais, Paris (1458)

Inscription
Lower left (annotated in pencil, AC in ligature): Avuy

Provenance
Hendrik Verschuuring; Simon Folker; earl of Aylesford; Charles Fairfax Murray; Frits Lugt; Collection Frits Lugt, Institut Néerlandais, Paris

Endnotes
2. The cow recurs in paintings in Detroit (Detroit 1929, no. 20) and Prague (Sip 1935, no. 95); both are by followers.

101
A Cow Standing
black chalk, gray wash, 13.6 x 18.9 (5 1/4 x 7 1/4). Collection Frits Lugt, The British Museum, London (1855-9.15.141)
Provenance
J. Barnard; Sir Benjamin West; J.C. Robinson; John Malcolm; The British Museum, London, 1895

Literature
Hind 1915–1932, no. 28; Amsterdam 1993d, 72

Endnotes
1. Reiss 1975, no. 65. Also related is the cow in the Milkmaid near a Hay Cart in the State Hermitage Museum, Saint Petersburg (Reiss 1975, no. 57). However, given the averted head and the entirely different approach, stressing areas of color, the relationship is far less evident.

IO2
A Bullock Standing
black chalk, gray wash, watercolored in brown, 13.6 × 18.1 (5 3/4 × 7 1/4); Amsterdams Historisch Museum (A 10141)

Provenance
Jhr. J. Goll van Franckenstein; H. van Cranenburgh; C.J. Fodor; bequest to the City of Amsterdam, 1860; Amsterdams Historisch Museum

Exhibitions
Amsterdam 1932, no. 17; Cologne 1955, no. 23; Haifa 1959, no. 76; Brussels, Amsterdam, and Hamburg 1961, no. 106; Budapest 1962, no. 20; Dordrecht 1977, no. 46

Literature
Broos and Schapelhouman 1991, 72, no. 49

Endnotes
1. The watermark in this sheet, a crowned escutcheon (illustrated in Broos and Schapelhouman 1993, 289; compare Churchill 1935, no. 201), is also encountered in that series.

IO3
A Cow Lying Down
black chalk, gray wash, 7.6 × 13.3 (3 × 5 1/4). Private collection, The Netherlands

Provenance
Fürst Von Hohenzollern-Sigmaringen; (Galerie Grünwald, Munich); (C.G. Boerner, Düsseldorf); J.A. Klaver; private collection, The Netherlands, 1994

Exhibitions
Amsterdam 1993a, no. 55

Literature
Boerner 1981, no. 24

Endnotes
1. A closely related drawing, A Cow Lying in the Grass Facing Left, with the same dimensions and identically placed cow, is in the British Museum in London (Hind 1935–1932, no. 34).

IO4
A Dog Lying Down
black chalk, gray wash, watercolored in very light green, 7.1 × 14.3 (2 3/4 × 5 1/4); Graphische Sammlung Albertina, Vienna (8388)

Inscription
Upper and lower right, erased

Provenance
Duke Albert of Saxe-Teschen; Graphische Sammlung Albertina, Vienna

Literature
Chong 1992, 318, 319, 395

Endnotes
1. Diversa animalia, published by Nicolaes Visscher, no. 8; see Wheelock essay, note 15.

2. Reiss 1975, nos. 48, 113, respectively. The dog also occurs in Mountain Landscape with a Shepherd and Travelers, Instituut Collectie Nederland (NK 1783), a painting attributed to Cuyp.

IO5
Shepherd with a Staff
black chalk, gray wash, traces of gum arabic, 19.4 × 11.8 (7 1/4 × 4 1/2); Museum Boijmans Van Beuningen, Rotterdam (Cuyp 4)

Provenance
G. Leembruggen Jr.; Museum Boijmans Van Beuningen, Rotterdam, 1860

Literature
Yapou 1981, fig. 29; Chong 1992, 430

Endnotes
1. Doubts have been raised concerning the landscape setting in the Amsterdam drawing Three Studies of a Shepherd (Amsterdam and Washington 1981, 121, fig. 2), while the authorship of the very beautiful Sitting Shepherd Picking Fleas (Amsterdam and Washington 1981, 121, fig. 3) has also been questioned. A drawing in the Museum Boijmans Van Beuningen, Rotterdam (inv. no. H 131), is certainly by Jacob van Srij.

2. The painting (Reiss 1975, no. 52; Chong 1992, 429, no. B 2) may be a copy of an original by Cuyp. The background is based on a view of Dordrecht seen from the east (cat. 72). The second shepherd, a man shown in profile with a shepherd’s staff, also recurs in Cuyp’s painting in Melbourne (Reiss 1975, no. 60), in which Leiden is depicted in the background, and is identical to his View of Leiden in the Rijksprentenkabinet; see Amsterdam 1987, no. 38.
IO6
Two Resting Shepherds
black chalk, gray wash, brushed with gum arabic in the foreground, 10.9 × 16.8 (4 3/4 × 6 1/2). Collection Frits Lugt, Institut Néerlandais, Paris (l 4369)

Inscription
Lower right (annotated in pen and gray wash): A.C.

Provenance
H. G. H. Galton; Frits Lugt; Collection Frits Lugt, Institut Néerlandais, Paris

Literature

Endnotes
1. Reiss 1975, no. 53.
2. V. de S. Collection; illustrated in Dordrecht 1977, no. 59.
3. Reiss 1975, no. 64. Chong considered this a workshop product. The German Chapel and the Mariakerk in the background of this painting are based on drawings from Cuyp’s Utrecht campaign, shortly before 1640.

IO7
A Milkmaid
black chalk, gray wash, some pencil, 12.1 × 14.8 (4 3/4 × 5 3/4). The J. Paul Getty Museum, Los Angeles (86.GG.672)

Provenance
L. Dupper Wzn; Victor de Stuers; private collection; The J. Paul Getty Museum, Los Angeles, 1986

Literature
Originalabbildungen 1912, pl. 12; Reiss 1975, 90; Potterton 1986, 28–29; New York and Chicago 1988, 15; Chong 1992, 313, 327, 468; Goldner and Hendrix 1992, 222, no. 94; Giltaij 1994, 121, 123

Endnotes
1. The attribution of this painting (formerly Duke of Sutherland Collection, purchased for the Van der Vorm Collection in 1980, and now in the Museum Boijmans Van Beuningen, Rotterdam; Reiss 1975, no. 56; a wide strip at the top was removed shortly before 1980) is questioned in Chong 1992, 468, C 60, and is maintained by Giltaij 1994.
2. Apart from the Rotterdam work, four other paintings include the maid: Dublin (Reiss 1975, no. 55); Saint Petersburg (Reiss 1975, no. 57); Detroit (inv. no. 89.33); and in the art trade in New York in 1942 (HdG 367; Chong 1992, no. C 75). The cow being milked in the painting in the Hermitage is very similar to the drawn cow by Cuyp in the British Museum, London (cat. 101).

IO8
Portrait of a Twenty-Nine-Year-Old Man
1646, pen and brush and gray ink on white prepared parchment, heightened with white, 20.8 × 16.5 (8 3/4 × 6 1/2). Staatliche Museen zu Berlin, Kupferstichkabinett (2389)

Inscription
Left center (in pen and gray ink): AEatis.23.1646; right center, signed: A. cuyp.

Provenance
C. Josi, Jhr. J. Goll van Franckensteijn; L. Dupper Wzn; Barthold Suurmood; Staatliche Museen zu Berlin, Kupferstichkabinett, 1874

Literature
Bock and Rosenberg 1930, 1112; Dordrecht 1977, 154; Chong 1991, 613

Endnotes
2. See Amsterdam and London 2000, 227, for further sources for this theme.
3. Rijksmuseum 1976, 449 (nos. SK-A-17472 – g) and Supplement 1992, 104. The sisters are Cornelis Samuelsz van Esch and his wife Josina de Carpentier; see Loughman 1991b. The attribution of these anonymous works to Paulus Lestre is not convincing.
4. According to Josi (in Ploos van Amstel 1821, 108), the portraits were “thought to represent Cuyp and his wife” (qu’on croit étre d’Albert Cuyp et son épouse). He also found them “handsome like the portraits by Rembrandt” (beau comme les portraits de Rembrandt).
5. Gemeentelijke Archiefdienst, Dordrecht (Atlas van Oijen); see Dordrecht 1977, no. 61. The influence of Jacob Gerritsz Cuyp, almost missing in the two oval portraits, is evident in the Colvius portrait drawing. The print after this portrait was used in Matthijs Balen’s Beschryvinge der stad Dordrecht, 1677.
