FROM BOTANY TO BOUQUETS
Shell Oil Company Foundation, on behalf of the employees of Shell Oil Company, is pleased to make possible From Botany to Bouquets: Flowers in Northern Art, the second exhibition in the National Gallery of Art’s Dutch Cabinet series.

From Botany to Bouquets, and the entire Dutch Cabinet series, continues in the tradition of exhibitions organized by the National Gallery, whose unrelenting pursuit of excellence has made it one of America’s finest cultural treasures and unquestionably one of the great art museums in the world. Its scholarly and diverse exhibitions have garnered critical and public acclaim and have helped earn our country’s capital city its international reputation as a major cultural center.

Shell is very proud of its long history of support for culture and the arts. And the National Gallery’s contributions to this country’s cultural environment and quality of life are as significant as they are beautiful.

Please join with us in experiencing this fascinating collection of Dutch and Flemish paintings of flowers in all the glory and unpredictability of their colors and shapes.

FOREWORD

The Dutch Cabinet Galleries, created with the generous support of Juliet and Lee Folger / The Folger Fund, have provided new opportunities for the collecting and presentation of seventeenth- and eighteenth-century Dutch art at the National Gallery. The rooms—intimate in scale and fitted with specially designed wall cases—are ideally suited for displaying small paintings of the type the Dutch so often executed as well as three-dimensional objects and works on paper. The Shell Oil Company Foundation has generously enhanced the Dutch Cabinet Gallery program by providing for a series of exhibitions, which began last year with the highly acclaimed Collectors Cabinet. We owe particular thanks to Jack E. Little, Shell’s president and chief executive officer, for continuing Shell’s tradition of support for Dutch initiatives, which include The Age of Bruegel: Netherlandish Drawings in the Sixteenth Century (1986); Piet Mondrian: 1872–1944 (1995); and Jan Steen: Painter and Storyteller (1996).

From Botany to Bouquets: Flowers in Northern Art, the second exhibition in the Dutch Cabinet series, brings together a magnificent group of sixteenth- and seventeenth-century flower still-life paintings, watercolors, manuscripts, and botanical books. Organized by Arthur K. Wheelock Jr., curator of northern baroque paintings at the Gallery and author of this catalogue, the exhibition traces the development of the flower still-life genre, from its very beginnings in the margins of prayer books, to its full “flowering” in the still life paintings of Jan Davidsz. de Heem and Jan van Huysum. The elegant installation, which allows the viewer to appreciate the complex relationships among paintings, manuscripts, printed books, and individual watercolor studies of flowers, is the work of Mark Leithauser, our chief of design.

We are indebted to the many private lenders and public institutions who have generously lent works of art, particularly Dumbarton Oaks, The Folger Shakespeare Library, the Library of Congress, the North Carolina Museum of Art, the Philadelphia Museum of Art, and the Wadsworth Atheneum, Hartford, Connecticut. Without them we could not have told the story that unfolds around these radiant images.

INTRODUCTION

The artists who created the flower still lifes in this exhibition could convey the delicacy of blossoms, the organic rhythms of stem and leaf, and the varied colors and textures of each and every plant. They could capture the fragile beauty of flowers and the sense of hope and joy they represent. Their bouquets come alive with flowers that seem so real we almost believe their aroma—and not the artist’s brush—has drawn the dragonflies and bees to their petals.

However, the great appeal of seventeenth-century Dutch and Flemish flower still lifes stems not only from their life-like qualities but also from the fascinating philosophical issues they raise about the relationship of art to nature, to poetry, and to life itself. These artists sensitively combined various species of flowers—among them tulips, roses, columbine, and lilies of the valley—in pleasing and dynamic compositions that feel true to life. Yet many of the bouquets they painted could never have existed in nature because the flowers they imaginatively combined would not have blossomed at the same time of the year.

Indeed, this ability to create effects that Nature could not equal was often extolled by contemporary patrons, poets, and critics.

By the early seventeenth century, the collecting of flowers, as well as the painting of flowers, had become a central passion in The Netherlands. Botanists and private collectors eagerly sought to acquire unusual and exotic flowers, many of which were imported from the Balkan peninsula, the Near and Far East, and the New World. Bulbous plants, especially the tulip, were particularly admired—their bright colors and dramatic forms accent numerous seventeenth-century still lifes.

Despite the apparent realism of these flower bouquets, few Dutch still lifes were painted from life. In general, the rarity and great expense of exotic flowers prohibited artists from having easy and regular access to them. Tulips, in particular, were exceedingly expensive, so much so that during the tulipmania of the mid-1630s houses were actually traded for bulbs. Because of this great fascination with tulips, stemming from the unpredictability of their colors and shapes, artists like Jacob Marrel produced “tulip books” to provide images for prospective buyers. Sheets from such a book, in which each exotic tulip is carefully depicted and named, are included in this exhibition.

The exhibition, which examines the origins of flower painting with a selection of botanical treatises, manuscripts, and watercolors by outstanding sixteenth- and seventeenth-century printmakers and draftsmen, also raises fascinating questions about flower symbolism. For example, certain flowers, such as the rose, lily, and violet, were traditionally associated with Christian traditions, and it seems probable that religious concepts were occasionally illustrated in flower bouquets. Other still
lifes, particularly those that place flowers together with skulls, clearly refer to the transitory nature of life. By introducing such spiritual ideals and moral concerns into their works, these painters placed their still lifes within a broad, humanistic context, which they achieved with great enthusiasm, dignity, and intelligence.

I would like to acknowledge those who have helped to make this exhibition a reality, particularly those colleagues who lent their enthusiastic support and guidance in helping select and prepare loans: Julie Ainsworth, Jean Caswell, Mark Dimunation, Rachel Doggett, Deborah Evans, David Koetser, Joe Mills, Linda Lott, Katherine Crawford Luber, Cynthia Pinkston, Rob Shields, Peter Sutton, Steven Umin, Dennis Weller, and Tony Willis. I am also extremely grateful to Sally Wages, who shared not only her library, but also her good counsel about this fascinating and complex subject.

At the National Gallery, the loan arrangements were expertly handled by Jennifer Fletcher Cipriano from the department of exhibitions, headed by D. Dodge Thompson, and by Melissa Stegeman and Michelle Fondas from the registrar’s office, headed by Sally Freitag. Susan Arensberg coordinated the educational component of the exhibition. Once again, I had the good fortune to work closely with Mark Leithauser, chief of design, and other members of his outstanding staff. Among those who helped coordinate the installation of this show were Linda Heinrich, Gordon Anson, John Olson, Anne Kelley, and Jane Rodgers. Their work was abetted by the contributions of members of the conservation department, particularly Hugh Phibbs and Elaine Vamos. Pierre Richard headed the team of art handlers who installed the works.

The catalogue benefited from the conceptual guidance and expert editing of Julie Warnement. The elegant design of both catalogue and brochure was created by Chris Vogel. Sara Sanders-Buell in the department of visual services gathered color transparencies, while Dean Beasom, Philip Charles Jr., Lorene Emerson, Lyle Peterzell, and Lee Ewing photographed works borrowed from a number of private collectors.

I would also like to thank those colleagues at the Gallery who willingly shared works under their care: Neal Turtell, executive librarian, and Andrew Robison, Andrew W. Mellon Senior Curator and head of the department of prints and drawings, who was assisted by Margaret Grasselli, Gregory Jecmen, and Virginia Clayton.

Finally, to members of my own department, I offer my thanks for their invaluable help. Ésmée Quodbach, who was my assistant, and Isabelle Knafoú, an intern from Université de Lille, France, were instrumental in the early stages of the project. Phoebe Avery, an intern from the University of Maryland, and Quint Gregory, assistant in the department, thoughtfully commented on the manuscript. Ana Maria Zavala, our staff assistant, diligently handled most of the administrative details.

Arthur K. Wheelock Jr.
The Realism of Dutch and Flemish Still-Life Painting

Balthasar van der Ast knew how to paint flowers. He could capture their organic rhythms, whether those caused by the weight of blossoms or the opening of petals. He carefully observed the patterns of their colors and sought to suggest their varied textures. He sensed how different flowers, among them tulips, roses, columbine, and lilies of the valley, could best be combined to make a pleasing and dynamic composition, one that feels true to life even if no such arrangement could exist in nature. Most of all, he painted flowers with the tenderness and delicacy of one who valued their fragile beauty and the sense of hope and joy that they represent.

Van der Ast (1593/1594–1657) was not the only Dutch artist to achieve such remarkable effects in his paintings. However, as one whose works epitomize the finest qualities of Dutch and Flemish flower painting, he serves as an excellent introduction to this genre. Moreover, he holds a special place in the story of seventeenth-century flower painting in the new style he forged, one that transformed the direction this type of painting would take.

Van der Ast’s stylistic innovation, which he introduced in a number of floral compositions during the mid-1620s, was to free bouquets of flowers from the tightly constricted compositions painted by his predecessors, Ambrosius Bosschaert the Elder (1573–1621) (fig. 29) and Roelandt Savery (1576–1639) (fig. 27). Van der Ast allowed light and air to pass in and around stems, leaves, and individual blossoms. In his Flowers in a Wan-li Vase (fig. 1), light shining from the left both accents individual blossoms and models their forms. Insects further enliven the scene with a sense of movement, for a dragonfly alights on a variegated red-and-white carnation and a butterfly rests on the petals of the centrally placed pink rose. Below, a lizard arches up to peer at the bouquet, as though responding to the menacing glare of the grasshopper (depicted in blue on the Wan-li vase), whose striped body playfully echoes the rhythm of the stems of the adjacent cherries. Like the dramatic red-and-yellow striped tulip crowning this composition, many of the blossoms are daringly open, a veritable explosion of color and form that belies the very notion that these paintings should be called still lifes.

So vivid is the realism of this flower bouquet that one can hardly believe Van der Ast carefully composed it by imaginatively combining drawings of individual plants, berries, and insects.1 And yet all evidence indicates that he worked in this manner. Not only do identical blossoms appear in various paintings, but his floral arrangement would never have formed an actual bouquet since the flowers he depicted did not blossom during the same season. Nevertheless, Van der Ast and his contemporaries would have considered this work a
painting made "naer het leven," a term generally understood today as a "painting from life," but also interpreted in the seventeenth century as a "lively" or "life-like" image.

Perhaps more than any other genre of painting, still lifes, and flower still lifes in particular, depended upon a sense of liveliness to succeed as works of art. Patrons, poets, and critics alike provided the highest accolades to still-life artists who could not only emulate nature but also make their paintings seem alive. Cardinal Federico Borromeo, writing in 1628 about a painting by Jan Brueghel the Elder (1568–1625), described how even in the dead of winter he imagined the aromas of the blossoms the artist had painted: "Then when winter encumbers and restricts everything with ice, I have enjoyed from sight — and even imagined odor, if not real — fake flowers...expressed in painting." In 1646 the poet Joachim Oudaan envisioned a painting of a bouquet of flowers as actual blossoms, ones that rivaled nature in their beauty: "No trained rose arbor gives more beautiful roses. No tulips, no narcissus ever met so suitable, so fine a likeness." Oudaan also stressed that the bouquet had the advantage that it would never wither: "[The rose] will endure in secure colors, planted to measure by Zeuxis’ hand, much better than in damp sand." Constantijn Huygens wrote a poem in 1645 that actually envisions a contest between Mother Nature and the flower painter Daniel Seghers (1590–1661) (fig. 40). The contest is won by the artist, whose painted flowers, which create "the fragrance of roses,...rendered the real one a shadow." Finally, in 1661 the critic Cornelis de Bie extolled Seghers for creating flowers so real that live bees would want to settle on them. De Bie exclaimed: "Life seems to dwell in Father Seghers’ art."

The enormous delight flower paintings engendered helps account for the large number of such works created throughout the seventeenth century. However, flower paintings produced in The Netherlands were remarkable for not only their number, but also their quality. The high standards to which flower still lifes were held meant that only the most gifted artists could earn a living painting them. Moreover, as is evident from the comments of Borromeo, Oudaan, and De Bie, the theoretical context for these works was quite varied, and involved, among other concerns, the relationship of art to nature, to poetry, and to life itself.

The Importation of Exotic Flowers
By the time Van der Ast painted Flowers in a Wan-li Vase in the mid-1620s, flowers as well as paintings of flowers had become a central passion for collectors and art lovers throughout Europe, but particularly in The Netherlands. Spurred on by the influx of exotic species imported from the Balkan peninsula, the Near and Far East, and the New World, collectors eagerly sought to acquire unusual flowers, which they cultivated in their gardens (fig. 16). They particularly admired bulbous plants such as the iris, the narcissus, the scarlet lily, the fritillaria, and, above all, the tulip—species whose bright colors and dramatic forms frequently accent flower paintings by the finest early seventeenth-century Dutch and Flemish painters.

The parallels between the visual appeal of these new species and the sudden flourishing of flower painting cannot be overestimated. Although flowers had always had multiple associations—ranging from love and purity to the richness of nature’s bounty, the fragility of man’s existence on earth, and the sense of smell—the idea that they were desirable primarily for their beauty and rarity, and were worthy of being the subject of an independent work of art, only developed at the end of the sixteenth century.

This widespread fascination with flowers and gardens grew out of three pictorial traditions that were current in the sixteenth century: illusionistic floral motifs in border illustrations of Books of Hours, which had a religious foundation; Renaissance naturalism, with theoretical and aesthetic considerations at its base; and botanical illustrations, an essentially scientific development due, in part, to advances in botany. Although
each had a distinctive character, these traditions were interrelated, for artists, botanists, illustrators, and publishers knew each other and drew from each other’s work. Their discoveries and ideas created the intellectual and artistic climate that stimulated the sudden flourishing of flower painting at the turn of the century.

Religious Foundations of Flower Painting

The Garden of Eden was a concept that was very real to Renaissance man: an idyllic paradise on earth from which Adam and Eve had been expelled for their disobedience. This land of bounty, it was believed, had been blessed with a temperate climate in which man and animal, surrounded by luscious vegetation, lived in perfect harmony. Seasonal changes were not known, for plants blossomed throughout the year, not only radiant flowers that brought joy to the heart, but also aromatic herbs that maintained the health of the body.

Adam and Eve may have been expelled from the Garden of Eden, but throughout the Middle Ages theologians believed that the earthly paradise had survived the flood and still existed. For a while, discoveries of exotic flora and fauna in the East and West Indies persuaded a number of explorers that they had come near this fabled land, but by the late sixteenth century it was recognized that Eden was not to be found. Nevertheless, the ideal of the garden as a setting for rest and regeneration remained extremely important, and helps to explain the widespread fascination with flora in the sixteenth century.

While many flowers and herbs were cultivated for medicinal purposes, others were nurtured because they had become imbued with Christian symbolism. For example, the rose, a flower among thorns, could symbolize the Virgin, who had sprung from and grown up among sinners. The white rose was seen as an emblem of purity, chastity, and divine love, while the red rose could also symbolize Christ’s Passion. The white lily represented virginity and, thus, was used in Annunciation scenes, while the iris, with its royal associations, was symbolically related to Mary as Queen of Heaven. Gardeners also favored columbine, violet, daisy, pansy, and strawberry plants, not only for their beauty but also because the tripartite arrangement of their leaves and petals imbued them with Christian associations.

Not surprisingly, these very flowers featured prominently in the illusionistic border decorations of late fifteenth-century Flemish Books of Hours, particularly those produced in the so-called Ghent-Bruges school of manuscript illumination. In the Würzburg Hours different combinations of flowers appear in the various border decorations that are symbolically related to the miniatures they surround. For example, red and white roses are depicted on the page with The Annunciation (fig. 2), while a pansy and strawberry plant figure prominently in the border around an image of Christ in Majesty (fig. 3). The floral motifs in these borders are much more beautifully rendered and more accurate than flowers found in contemporary botanical treatises. Indeed, even though the roses and accompanying insects in this manuscript are depicted on a gold ground, painted shadows subtly situate them in three-dimensional space. One intriguing hypothesis for this remarkable illusionism—a characteristic of the Ghent-Bruges school of manuscript illumination—involves the prayer books that aristocrats took with them on pilgrimages. These pilgrims collected mementos during their travels, many of which they pinned into their books. While mementos were often devotional badges or medallions, natural objects such as flowers and insects were also treasured and pressed between the pages. The painted borders in these manuscript illuminations appear to have been inspired by this practice. Indeed, some early sixteenth-century Books of Hours actually depict flowers illusionistically pinned onto the page.

Albrecht Dürer and Sixteenth-Century Nature Studies

Botanical studies harken back to antiquity, to the treatises of Theophrastus, Pliny, Galen, and Dioscorides, all of whom studied the plant kingdom to
FIGS. 2—3. Anonymous, The Annunciation (left, cat. 43) and Christ in Majesty (right) from Book of Hours (Warburg Hours), c. 1500, illumination on vellum, Library of Congress, Rare Book and Special Collections Division
discover cures based on plant extracts. These ancient authors, particularly Dioscorides, were so revered during the Middle Ages that it was assumed they had discovered every species and answered every question that could be raised about the plant kingdom.\(^{12}\)

During the Renaissance, however, scholars began to question the authority of these authors when they discovered numerous plants that Dioscorides and the other ancient authors had not included in their studies. Renaissance scholars also came to realize that close examination of plants could reveal new, and sometimes conflicting, information about them.\(^ {13}\) Moreover, the visual information that accompanied classical texts left much to be desired, for images in most manuscript illustrations based on antique sources were quite generalized (see figs. 4, 5).\(^ {14}\)

The new Renaissance attitude toward the authority of antiquity, with its corollary, a new-found emphasis on close observation of nature, is nowhere more evident than in the theoretical approach to art adopted by Albrecht Dürer (1471–1528). Dürer’s most explicit commentary on the importance of observing nature appears in his *Vier Bücher von Menschlicher Proportion* (Nuremberg, 1528):

But life in nature manifests the truth of these things. Therefore observe it diligently, go by it and do not depart from nature arbitrarily, imagining to find the better by thyself, for thou wouldst be misled. For, verily, “art” [that is, knowledge] is embedded in nature; he who can extract it has it.\(^ {15}\)
Although Dürer’s recommendation to observe nature diligently was not specifically related to the study of individual plants, he applied this approach in some remarkable nature studies that forever transformed the way artists depicted birds, flowers, and seemingly insignificant tufts of grass. Almost immediately, other German artists began to emulate Dürer’s style, which gave birth to an extraordinary tradition of careful nature studies that culminated in the work of Ludger von Ring the Younger (1522–1584) (fig. 14) and Joris Hoefnagel (1542–1600) (fig. 25).

This magnificent Tuft of Cowslips (fig. 6) is one such work from the early sixteenth century. In this gouache study on vellum, inscribed 1526/AD, the artist has carefully observed the organic forms of the plant, not only by indicating the rhythms of its leaves, stems, and blossoms, but also by capturing the nuances of color that enliven its form. The cowslip (Primula veris L.), commonly referred to as a primrose, was traditionally included in herbals, which may account for its appearance as a separate nature study. Botanists recommended cowslips for a number of cures, including gout and palsy. Powder ground from its roots was thought to alleviate stones in the kidneys and bladder.
Printed Herbals

Dürer’s immediate impact on the evolution of printed herbals was profound. One of his more talented students, Hans Weiditz II (before 1500–1536), made a number of remarkable watercolor plant studies for the botanist Otto Brunfels (1464–1534), who published his important herbal in 1530. The woodcuts made from Weiditz’ studies were so much more lifelike than the stylized images appearing in late fifteenth-century herbals that Brunfels proudly titled his work *Herbarum Vivae Eicones (Living Portraits of Plants).*

Weiditz intended his highly accurate botanical drawings to aid in the identification of plants. Consequently, unlike Dürer or the artist who made *Tuft of Cowslips,* he isolated individual plants and depicted their roots. A particularly beautiful example of his work is this hand-colored depiction of the narcissus, which he portrayed in three different stages of development (fig. 7).

In the wake of Brunfels’ herbal, a virtual flood of botanical works appeared in major typographic centers throughout Europe: between 1531 and 1600 over 650 botanical books were published in Italy, Germany, France, and the Southern and Northern Netherlands. This extraordinary outpouring resulted not only from scientific advances in the description and classification of plants, but also from the influx of newly discovered species, both in Europe and from around the world. During the course of the century, the number and types of plants botanists had identified grew from approximately one thousand to six thousand species.

Nevertheless, these publications only succeeded because of the widespread interest in plants and their propagation at all levels of society. Even poor students actively sought to acquire rare plants by hunting for them in the wild or by trading seeds with friends or travelers.

As interest in botany spread during the sixteenth century, the character of herbals changed. While many remained sumptuously produced and expensive, others were clearly intended for a middle-class, less literate clientele. One relatively small herbal, published midcentury by Christian Egenolph (1502–1555) in Frankfurt, contains a title page depicting a common man hard at work in his own garden (fig. 8). This volume, which has virtually no text other than the Latin and German names of the approximately eight hundred clearly illustrated and hand-colored plants, was extensively annotated by an early Dutch or Flemish owner who probably used it as a practical aid. Indeed, the impression of various plants dried between its pages, similar to those that must have at one time been collected in Books of Hours, can still be seen (fig. 9). And the flora depicted, including here a strawberry plant, an iris, and a hellebore (fig. 10), is, despite the small scale of the images, far more easily identifiable than that in the manuscript illustration executed less than half a century earlier (fig. 4).

For his small publication Egenolph relied heavily on the excellent illustrations in the important herbal *De Historia Stirpium Commentarii Insignes* (Basel, 1542), published by Leonhart Fuchs (1501–1566), professor of medicine at the Universities of Ingolstadt and Tübingen. With its descriptions of four hundred German and one hundred exotic plants, Fuchs’ herbal set a new standard for
FIGS. 8–10. Christian Egenolph, Title Page (top left), Dried Plants (top right), and Variety of Plants (right, cat. 54) from Herbarum Arborum, Fruticum Imagines (Frankfurt), c. 1550, hand-colored, The Folger Shakespeare Library, Washington, Gift of Mary P. Massey
FIGS. 11–12. Leonhart Fuchs, Cyclamen (top left) and Portrait of Three Artists at Work (top right, cat. 55) from De Historia Stirpium Commentariorum Insignes (Basel), 1542, hand-colored, Dumbarton Oaks, Washington, Trustees for Harvard University.

comprehensiveness. Its high quality, large woodcut illustrations—for example, this boldly patterned cyclamen plant (fig. 11)—were equally important. Indeed, so proud of these illustrations was Fuchs that he included a full-page plate of the artists at work: Albrecht Meyer drawing a plant from life; Heinrich Fullmaurer transferring a drawing to a wood block; and Veit Rudolf Speckle, who cut the blocks (fig. 12).

The refined woodcut images made from Meyer’s drawings were left unshaded because they were intended to be hand colored. Fuchs wrote in his introduction:

As far as concerns the pictures themselves, each of which is positively delineated according to the features and likeness of the living plants, we have taken peculiar care that they should be most perfect; and, moreover, we have devoted the greatest diligence to secure that every plant should be depicted with its own roots, stalks, leaves, flowers, seeds and fruits.

Indeed, the expressive characterization of plants in this herbal, such as the flowing image of wild basil on the page facing the portraits of the three artists, had a profound impact on virtually all subsequent publications.

The man most responsible for bringing Fuchs’ work to The Netherlands was Rembert Dodoens (1517–1585), a scholar who served as city physician in Mechelen until 1575, when he moved to Vienna to become the personal physician of Emperor Maximilian II. In 1543 Dodoens had brought Fuchs’ treatise to a much broader audience by translating it into Dutch.

Dodoens published his own herbal, Cruydeboek, in Antwerp in 1554. The dependencies on Fuchs’ De Historia Stirpium Commentarii Insignes are many: 500 of the 710 illustrations, for example, are copies of Fuchs’ images. Nevertheless, Dodoens was extremely proud of the realistic images of plants in his herbal, including many from the Low Countries that had not previously been identified. They were, according to him, “naer dat leven gheconterfeyt,” a term that could mean “drawn from life” but, since so many of the illustrations were copied from Fuchs, more probably should be translated as “drawn lively” or “in a lively fashion.”

As is evident in these hand-colored images of wild poppies (fig. 13), the woodcuts are expressively carved and indicate the distinctive character of each plant’s roots, leaves, stems, and blossoms. With each image, Dodoens also provided a careful description of the plant’s habitat, growing season, and special medicinal attributes—information that expanded upon the utilitarian character of his publication.

A Precursor to Seventeenth-Century Flower Painting

The plethora of native plants described and depicted by botanists such as Fuchs and Dodoens expanded the range of herbs and flowers deemed acceptable for artistic representation. Nowhere is this development more evident than in the work of Ludger tom Ring the Younger, who created this extraordinary floral still life at some point during the 1560s (fig. 14). With seeming abandon, Tom Ring filled this Venetian glass vase with an array of spring and summer wild flowers, a veritable explosion of colors and shapes so fresh in appearance that one can almost imagine them being gathered that very day. With so many species spilling out of the narrow mouth of the vase, it is not surprising that a number of blossoms, strewn across the tabletop, could not fit.

Although Tom Ring made a number of plant studies that follow directly in the tradition of Albrecht Dürer, he also infused many of his flower paintings with religious symbolism. Indeed, his earliest floral bouquets appear in biblical scenes, in which he only included flowers imbued with traditional religious symbolism. When he began painting independent floral bouquets in the mid-1560s, the flowers he depicted, such as lilies, and the inscriptions he placed on the vases indicate that these works had allegorical or religious significance.

As a pure celebration of nature’s bounty, Vase of Wild Flowers on a Ledge differs from
FIG. 14. Ludger tom Ring the Younger, Vase of Wild Flowers on a Ledge (cat. 23), c. 1565, oil on panel, Teresa Heinz (and the late Senator John Heinz)
such works. Nevertheless, as is character-
istic of his other still lifes, the composi-
tion is entirely fanciful, for Tom Ring
based the individual blossoms in the
bouquet on his separate nature studies. 31

Tom Ring’s artistic innovations had
little resonance beyond Münster and
Braunschweig, the cities where he
worked. Even though his images are far
livelier than those in Dodoens’ Cruydeboek
(compare, for instance, the red poppies
in figs. 13, 14), the impact of the herbal
was far more lasting. Indeed, Dodoens’
Cruydeboek—translated almost immedi-
ately into French by his friend and con-
temporary, the famous botanist Charles
de L’Escluse, more commonly referred
to as Carolus Clusius—quickly set a
new standard for herbals throughout
Europe. 32

Florilegia

Even more important for the present
study of flower imagery than the Cruyde-
boek, however, is a small book Dodoens
first produced for the Plantin Press in
Antwerp in 1568: Florum et Coronariarum
Odoratarumque Nonnullarum Herbarum Histo-
ria. 33 Devoted exclusively to odoriferous
flowers, this book signifies the develop-
ing fascination in Flanders with orna-
mental plants, most of which had no
known medicinal properties. 34 Many of
these rare species, such as the tulip,
recently imported from Turkey, or the
sunflower, recently imported from Peru
(fig. 15), were now gracing the extensive
gardens of plant lovers like Pieter van
Coudenberghe in Antwerp or Joannes
Brancio in Mechelen. The importance of
such gardens for the propagation of
knowledge of plants is clear from
Dodoens’ account of the sunflower:

They call this plant the “Sun of India” (or
“Indian Sun”) because it so resembles a
sun surrounded by rays. We saw this plant
in the delightful garden abundant with
any variety of plants belonging to the
excellent and worthy Joannes Brancio, a
man who is very knowledgeable about
the diversity of plants and whose gen-
erosity and goodwill has resulted in a not
inconsiderable number of flowers being
added to this treatise which otherwise
would not have been included. You may
seek it in vain elsewhere, only to find it
in his garden. 35

Dodoens’ small herbal ushered in a
new form of botanical book, the flori-
legium. Text in florilegia was summary, if
present at all, for these beautifully con-
ceived publications and manuscripts con-
sisted almost exclusively of images of
flowers, often beautiful or rare flowers
that took pride of place in an individual’s
garden. Crispijn van de Passe the Younger
(c. 1597—c. 1670), in the introduction to
his influential florilegium Hortus Floridus
(1614), acknowledges twenty-seven
“lovers of flowers and herbs” from
Utrecht, Amsterdam, Haarlem, and
Leiden who provided him access to the
rare blossoms depicted in his publica-
tion. Indeed, the patrons for some seventeenth-century florilegia were owners of great gardens who wanted a permanent record of the rare plants they had assembled (see figs. 48, 49).

_Hortus Floridus_ contains a rare view of an ideal garden from the early seventeenth century (fig. 16). The private, enclosed space is divided into an ingenious, geometric pattern of small beds, each of which would have been bordered by low herbs and shrubs such as lavender, thyme, camomile, or box. These beds provided elegant frames for the choice plants in the collection: for example, a stunning Crown Imperial reigns in the circular bed at the center, while irises, tulips, and a sunflower occupy other areas of the garden. Van de Passe’s garden represents an elaboration of the simpler geometric designs for rectangular compartments of small flower beds popular in the last decades of the sixteenth century. Such a design is illustrated here in a delightful print of a garden of love by an unknown follower of Hans Vredeman de Vries (fig. 17).²⁶

One of the first artists to create a florilegium was Jacques Le Moyne de Morgues (c. 1533–1588). A French Huguenot from Dieppe, he is best known for the images of native peoples, flora, and fauna he made while on a French expedition to Florida during the mid-1560s.²⁷ In recent years, his name has also been attached to a number of remarkable watercolor and bodycolor studies of flowers and fruit, as well as to complete manuscripts consisting of deli-
cately rendered flowers. The pink damask rose facing a purple-and-blue wild pansy (heartsease), illustrated here, is from one of his most beautiful manuscripts, a small volume from the Garden Library, Dumbarton Oaks, consisting of sixteen miniatures painted on gold grounds (fig. 18).

This fascinating technique, unique among florilegia, indicates that Le Moyne de Morgues received his training as a miniaturist, perhaps in a French workshop that specialized in Books of Hours. Whatever his training, remarkable similarities exist between the techniques used in this manuscript and those in the Wurzburg Hours (see figs. 2, 3). Indeed, the very choices of flowers in this manuscript—roses, pansies, violets, strawberry plants, and carnations—are precisely those found in Books of Hours, which suggests that this florilegium has at its core religious as well as botanical underpinnings.

None of the other extant manuscripts by Le Moyne de Morgues are executed on a gold ground, and his later works suggest that he became progressively more concerned with botanical accuracy. This interest culminated in the publication of a printed florilegium, La Clé des champs (London, 1586), which contained over ninety woodcut images of flowers, fruit, animals, and birds. Aside from allowing the reader to enjoy the “marvellous artifice of Nature,” Le Moyne de Morgues recommended his publication as a model book for painters, engravers, jewelers, and embroiderers.

Le Moyne de Morgues based the floral images in this publication on a large number of delicate and sensitively rendered watercolors made from life. These watercolors, however, also had an extremely important afterlife, for they were apparently known, or owned by, one of the preeminent Dutch engravers and publishers, Crispijn van de Passe. 
Elder (1564–1637). Van de Passe and his family, including sons and daughters he had trained to be engravers, established an important publishing house in Utrecht shortly after moving there in 1612. Two years later, his talented son, the younger Crispijn, published Hortus Floridus, the most influential florilegium of the seventeenth century. Although he apparently engraved most of his flowers from life, a number of images engraved by another hand are based on watercolors by Le Moyne de Morgues (fig. 19).

Van de Passe the Younger, following in the tradition of nature studies made by Dürer and his followers (see fig. 6), established a new form of botanical illustration by depicting flowers growing in the soil, occasionally enlivening his scenes with insects and small animals (figs. 20, 21). To provide information about the bulb or root structure, he included uprooted or unburied bulbs resting on the soil. Although he and his collaborators carefully engraved leaves and blossoms to suggest nuances of texture and color, he also provided detailed instructions for coloring the images (fig. 21). Like Le Moyne de Morgues’ La Clé des champs, Van de Passe’s publication was widely consulted and used as a model book by artists and designers. Indeed, a number of images in a copy of the book in the Folger Shakespeare Library (cat. 59) have been stippled for transfer.

Another popular early seventeenth-century florilegium, more elegant than Van de Passe’s Hortus Floridus, was Johann Theodor de Bry’s Florilegium (Amsterdam, 1612) (fig. 22). Its large scale allowed De Bry (1561–1623) to produce detailed engravings of flowers that are remarkable for their clarity of form and structure. While maintaining the flower’s essential characteristics, De Bry often purified and idealized its form in his line engravings. This idealization reflects his underlying philosophical approach, which was

FIG. 21. Crispijn van de Passe the Younger, Crocus (cat. 57) from Hortus Floridus (Arnhem), 1614, hand-colored, Collection of Mrs. Paul Mellon, Upperville, Virginia
founded on the belief that “Of all the things which spring from this earth, flowers are the most beautiful for their grace and dignity, just as man surpasses every other living thing in dignity of body and soul.” Although other artists may have sought to create more lifelike images than did De Bry, his appreciation of the grace and beauty of flowers was shared by all who came to depict them so carefully and lovingly in their drawings and paintings.

Joris Hoefnagel

The full story of seventeenth-century flower painting cannot be told without taking into consideration the work of the finest miniaturist of the late sixteenth century, Joris Hoefnagel (1542–1600). The first important phase of Hoefnagel’s artistic career probably did not occur until the 1570s, when he studied in Antwerp with the miniaturist Hans Bol (1534–1593). In 1576 Hoefnagel fled Antwerp when it was sacked by Spanish soldiers and entered the court of Duke Albrecht V of Bavaria. By then Hoefnagel had developed a remarkable facility for painting illusionistic flowers and insects in the margins of manuscripts. When illustrating the empty margins of the Book of Hours of Philip of Clèves, he continued the practice of earlier painters of Books of Hours from the Ghent-Bruges school and depicted realistic flowers illusionistically pinned onto the leaves of the manuscript.
Hoefnagel concentrated on this project for over two decades, until it was acquired for a great sum by his eventual patron, the Emperor Rudolf II. Its pages are filled with images drawn from life, but also with those copied from the works of naturalists, particularly Conrad Gesner, and artists, among them Albrecht Dürer and Hans Bol. Dürer’s nature studies, much admired at the courts in Munich, Vienna, and Prague, profoundly affected Hoefnagel’s style. One particularly striking example is this delicate image of a blue iris from volume I of The Four Elements, Ignis. On this and many other pages in this volume, Hoefnagel whimsically played with the spatial illusionism of his scene. While the insects cast shadows on the page, the iris seemingly grows vertically, its stem attached to the bottom of the gold oval enframement and its leaf disappearing behind the oval at the top.

During the early 1590s Hoefnagel lived in Frankfurt, a dynamic city filled with emigrés—humanists, artists, naturalists, publishers—from the war-torn Southern Netherlands. Hoefnagel quickly joined this circle, which included Carolus Clusius. This botanist had in his possession illustrations Le Moyne de Morgues had made during his Florida expedition, and probably also owned other nature studies by the French artist; these he certainly would have shown to Hoefnagel. Perhaps because he found himself in the midst of this flourishing publishing

There in Munich, in the midst of the duke’s renowned Kunstammer, Hoefnagel utilized the pictorial heritage of the Ghent-Bruges school of painting to create one of the most remarkable compendia of natural history ever made, a four-volume manuscript, The Four Elements. Hoefnagel organized his encyclopedic presentation of thousands of living creatures around the traditional framework of the four elements. He carefully rendered each of the birds, animals, fish, insects, and flowers in watercolor and bodycolor, and sensitively arranged them within oval fields (fig. 23). Latin inscriptions derived from the Bible, the Adages of Erasmus, proverbs, and classical authors accompany each page and provide a moralizing commentary to the images portrayed. In its fusion of art, science, and emblems, The Four Elements summarizes much about late sixteenth-century attitudes toward the description and discovery of the world.
FIG. 24. Jacob Hoefnagel after Joris Hoefnagel, Emblematic Page (cat. 56) from Archetype Studiaque Patris Georgii Hoefnagelii (Frankfurt), 1592, National Gallery of Art, Gift of Mrs. Lessing J. Rosenwald.

Pioneers of Early Seventeenth-Century Flower Painting
The widespread fascination of sixteenth-century Dutch and Flemish botanists, gardeners, and artists in the cultivation, propagation, display, and accurate depiction of individual plants and blossoms underlies one of the most remarkable genres of painting to emerge at about the turn of the century: the representation of flower bouquets artfully arranged in a decorative glass or vase. Almost simultaneously, and seemingly independently, painters in various artistic centers throughout The Netherlands, not only in Antwerp, but also in Middelburg, Amsterdam, and Leiden, began to create...
imaginative displays of floral bouquets. These pioneers—Jacques de Gheyn II, Roelandt Savery, Ambrosius Bosschaert the Elder, Christoffel van den Berghe (active by 1617–1642), and Jan Brueghel the Elder—created images that established the stylistic bases for the extraordinary tradition of Dutch and Flemish flower painting that evolved during the Golden Age of the seventeenth century.

Many questions surround the origins of flower painting. How is it that these masters learned so rapidly to depict accurately the delicacy of petals, the textures of leaves, and the organic relationships of the plants’ parts? Who gave them access to these flowers and taught them botany? Who persuaded them that there was a ready market for paintings of floral bouquets, and what, indeed, was this market? And, finally, were these paintings admired solely as aesthetic objects or did they also contain symbolic meanings that enlarged their appeal to collectors?

Ludger von Ring’s vases of flowers, painted in the 1560s (see fig. 14), had little or no impact on the history of Netherlandish flower painting, probably because his works remained in Münster and Braunschweig. Depictions of flower bouquets in vases, however, were familiar to Dutch and Flemish painters through prints and title pages of herbals. Most of

FIG. 25. Joris Hoefnagel, Flower Still Life with Alabaster Vase (cat. 17), c. 1595, oil on copper, Teresa Heinz (and the late Senator John Heinz)
these were quite stylized and, as with the vase of flowers in Archetypa (see fig. 24), depicted densely packed, symmetrical arrangements, surmounted by one large blossom, usually a tulip.

In various ways, Dutch and Flemish artists who pioneered this new genre of painting sought to go beyond these slightly stilted engraved images by imbuing their flower still lifes with a breath of life.52 Through precise rendering of plants, naturalistic coloring, and imaginative arrangements, they sought to create the impression of images painted “naer het leven,” even when they included blossoms from different seasons of the year.

These painters believed that a diverse array of differently shaped and colored flowers made for a visually interesting bouquet, an idea implicit in Karel van Mander’s 1604 poem on the fundamentals of artistic creation:

Nature is beautiful through variety; this one can see when the earth, blooming with almost a thousand colors, stands showing its worth to the starry throne of Heaven.53

While artists relied upon careful observation of God’s wonders to render individual blossoms, they used their imagination to create variety within their bouquets. Indeed, the artist’s ability to create effects that Nature could not equal was often extolled in contemporary thought.54

One of the earliest, and most intriguing, painted flower bouquets is an oil on copper from the late 1590s by Joris Hoefnagel (fig. 25).55 Although no other comparable works are known by Hoefnagel, the carefully modeled spring flowers—among them a red anemone, lavender tulip, hyacinth, crocus, and yellow daffodils—have a rhythmic flow reminiscent of flowers in his manuscript images, and the elegant alabaster vase resembles one in his Archetypa (see fig. 24).

The connections between the painted and engraved images, however, also illuminate the differences between them. The informal arrangement of spring flowers in the painting is far more life-like than the symmetrical bouquet in Archetypa, a conceptual change indicating that the artist was more intent upon replicating nature in his painting than he was in his emblematic engraving. Since many of the flowers in Hoefnagel’s painting are exotics that had only recently been imported into The Netherlands, memorializing such rare specimens, and showing their brilliant colors, may have been one of the stimuli for the emergence of the flower still life.56

Jacques de Gheyn II

It is entirely possible that this generation of painters was drawn into the field of flower painting by botanists who engaged artists to record specimens for their own research. The most important of such connections existed between Carolus Clusius, who had moved from Frankfurt to Leiden in 1593 to lay out the famous botanical garden at the university, and Jacques de Gheyn II, who had moved to Leiden from Haarlem in 1595.

Their contact is documented not only through the portrait De Gheyn made of Clusius in 1600, but also through the title page the artist designed for Clusius’ magnum opus, Rariorum Plantarum Historia (Antwerp, 1601).57 De Gheyn also engraved the plan of the Hortus Botanicus that Clusius designed for Leiden. Clusius’ presence in Leiden almost certainly persuaded De Gheyn to expand his artistic repertoire from primarily imaginative figural drawings and engravings to include careful nature studies of flowers, insects, and small animals.

Throughout his long and illustrious career, Clusius had discovered numerous exotic species of plants on travels to distant lands, many of which he incorporated into the Hortus Botanicus in Leiden. There he propagated and popularized not only the tulip, but also other species from the Middle East, among them daffodils, Crown Imperials, and hyacinths. Clusius approached botanical studies very seriously, filling his publications with careful descriptions of plants to complement the woodcut illustrations. As with Dodoens, Clusius often based these images on watercolor drawings he had commissioned from artists or had received as gifts from other collectors and botanists. This wealthy and inveterate collector of botanical imagery almost
certainly possessed drawings by his friend Joris Hoefnagel, as well as Archetypa, which Hoefnagel had published in Frankfurt while Clusius resided there. He probably also owned botanical drawings by Le Moyne de Morgues.58

To judge from Van Mander’s intriguing account of De Gheyn’s artistic career in Het Schilderböck (1604), the artist first made oil paintings of floral bouquets when he began to take an interest in learning about color. Van Mander wrote that De Gheyn’s first still life, “a small flowerpot from life,” was “very precisely done and amazing as a first effort.”59 This painting was well received, for Van Mander noted that it was soon purchased by the Amsterdam “art-lover,” Hendrick van Os, which indicates that a ready market among collectors already existed for this new genre of painting.60 Indeed, Van Mander also related that a larger bouquet of flowers subsequently painted, “with much patience and precision,” was acquired by no less a connoisseur than Emperor Rudolf II.

One of De Gheyn’s finest achievements is an album of flower-and-insect watercolor drawings on parchment, which Rudolf II also acquired.61 De Gheyn’s album (executed 1600–1604, now in the Institut Néerlandais, Paris) has the character of a florilegium, and probably depicts flowers growing in Clusius’ Hortus Botanicus in Leiden.62 Aside from providing De Gheyn with flowers, Clusius may also have furnished him with artistic models to emulate, probably botanical illustrations by Hoefnagel and Le Moyne de Morgues.63 De Gheyn’s album also includes one study of flowers, informally arranged in an alabaster vase, quite similar in style to Hoefnagel’s painting (see fig. 25).

An unusually intimate painting by De Gheyn dating from this period, 1602–1604, is a sensitively conceived arrange-
ment of flowers in a bulbous glass vase (fig. 26). De Gheyn effectively adapted his tightly massed composition of flowers, including a large pink rose, carnations, pansies, and a Turk’s Cap Lily, to fill the circular copper support. He almost certainly composed his bouquet from drawings he had made from life; the exotic Turk’s Cap Lily, for example, also appears in the Paris album. As with many early still-life painters, De Gheyn attached disproportionately large and weighty blossoms to short stems, which are visible through the greenish blue tonalities of the glass vase. Nevertheless, he sought to give his blossoms a naturalistic character by modeling them with light, which strikes this bouquet from the left. A painted reflection of the window on the surface of the glass vase enhances the illusion of reality, as does the diffused light refracted onto the stone ledge to the right of the vase.

Roelandt Savery
The differences in approach between still lifes and these other genres of painting are particularly evident in the work of Roelandt Savery. Although Savery painted landscapes with dramatic light effects and exaggerated, distorted rock formations, he was as intent as any other still-life painter of the period to record individual blossoms in his floral bouquets. He was so successful that specialists today can identify each and every flower and animal in his complex and varied arrangements.

This intriguing figure’s importance in the development of flower painting has often been underestimated. Born in Kortrijk, Savery lived and studied in Amsterdam with his older brother Jacques from about 1591 until 1603, when the latter died from the plague. From his brother, Roelandt learned to paint both still lifes and Paradise scenes filled with exotic animals and plants—two specialties that appealed greatly to Rudolf II. The emperor seems to have invited Roelandt to work for him in Prague, for Savery moved there in 1603 or 1604 and stayed until 1615, when he returned to Amsterdam. But it was Savery’s next move that was to prove significant for the story of the development of seventeenth-century Dutch flower painting. In 1618 he settled in Utrecht, where he influenced Ambrosius Bosschaert and Balthasar van der Ast, both of whom had moved to the city the previous year. Savery lived in Utrecht for the rest of his life and enjoyed a successful career, though he died in bankruptcy.

Savery’s remarkable floral bouquet, dated 1603, is the earliest securely dated still life by any Dutch or Flemish artist (fig. 27). Whether Savery painted it in Amsterdam or Prague is not known, but its fascinating combination of naturalism and exoticism is precisely the type of image that appealed to Rudolf II. Savery placed his arrangement, including a flame red-and-yellow tulip, a blue iris, roses, columbine, and a fritillaria, in a stone niche, as though he wished to contrast the rugged texture of the stone with the delicacy of the flowers, leaves, and buds—whose deep colors and soft forms imbue them with a velvety sheen. The bouquet fills the niche, its peripheral forms enveloped in the atmospheric recesses of the shaded background. The niche enhances the sense of illusionism Savery wished to create, an effect he reinforced not only by illuminating the still life from the side, but also by overlapping leaves and flowers, including the rare and expensive tulip.

The stone niche is a fascinating concept, for it gives great weight and solemnity to the image, as though announcing that the bouquet has significance beyond the purely decorative. Although Savery provides no specific indication of symbolic meaning for his bouquet, the very
FIG. 27. Roelandt Savery, Flowers in a Roemer (cat. 24), 1603, oil on copper, Anonymous lender in honor of Frank and Janina Petschek
inclusion of blossoms from different seasons, rare shells, and an array of small insects and animals—moths, lizards, a beetle, a bee—indicates that he approached this image allegorically as well as naturalistically.

This imaginative representation of the multiplicity and beauty of God’s creations parallels depictions of Paradise that Savery and his older brother Jacques created during the early years of the seventeenth century. The iconic presentation of this bouquet serves much the same purpose as does the biblical narrative in the Paradise scenes: it makes one reflect upon the very reasons for the painting’s existence. Indeed, Savery’s compilation—with its self-conscious array of flowers, shells, and insects—has more in common with Jacob Hoefnagel’s emblematic image of a bouquet of flowers in Archetypa (see fig. 24) than with De Gheyn’s small, informal roundel (see fig. 26).

Ambrosius Bosschaert the Elder

Whereas Savery’s flower paintings appear somber and, perhaps because of the presence of lizards and beetles, slightly ominous, a far different mood pervades the flower still lifes of his slightly younger contemporary, Ambrosius Bosschaert, who began his artistic career in Middelburg, a prosperous trading center and capital of Zeeland. Much of Middelburg’s wealth came from the Dutch East India Company, for it was the location of one of the company’s two largest regional offices (Amsterdam being the other). As a center for the import of exotic goods from foreign lands, Middelburg was also renowned for its botanical gardens. Jacob Cats, for example, describes with obvious wonder the garden of a friend from Middelburg:

There she has many fruits from divers foreign lands,
A multitude of plants from divers distant strands,
And unknown, nameless blooms.

The most important Middelburg garden was that established in the 1590s by the great botanist Matthias Lobelius, a friend and colleague of Dodoens and Clusius who served as the city’s doctor during the latter decades of the sixteenth century. Lobelius’ herb garden, which was transformed into a flower garden after he left for England in 1602, was later owned by Adriaen van de Venne (1589–1662) and his brother.

This garden probably inspired Van de Venne’s delightful engraving of a scholar using one of his choice plants to show a worldly young man how God is visible...
in the smallest of his creations (fig. 28). The lively, expressive contours of the scholar’s costume evoke the excitement and enthusiasm of botanists and collectors over the discovery of every new plant, for each one revealed more of God’s unfathomable wisdom and ingenuity. Indeed, since the Middle Ages, man has believed that God reveals his wisdom not only in his first book, the Bible, but also in his second “book,” creation, that is, the earth with all its flora and fauna.

Bosschaert probably began his career depicting rare and exotic flowers in Middelburg gardens. It has been plausibly suggested that he was the artist a Middelburg gardener commissioned in 1597 to make an image of a fritillaria for the botanist Carolus Clusius. Whether or not Bosschaert was associated with this undertaking, he certainly composed his paintings with the aid of such drawings. Identical flowers, sometimes depicted in reverse, appear in different compositions. One example of this working procedure is evident in an exquisite still life from 1612–1614 (fig. 29), in which a number of flowers, including the white rose, red-and-white striped anemone, columbine, lily of the valley, yellow crocus, and pansy, appear elsewhere. Bosschaert also included identical blossoms in two related bouquets of roses (figs. 30, 31).

FIG. 29. Ambrosius Bosschaert the Elder, Still Life with Flowers (cat. 8), 1612–1614, oil on copper, Teresa Heinz (and the late Senator John Heinz)
Bosschaert infused his works with a sense of joy. He had an unerring compositional awareness, and delighted in combining a range of flowers with different colors and shapes to create a pleasing and uplifting visual experience. He also enjoyed the illusionism of painting flower stems through the translucent surface of glass. In many respects, Bosschaert’s style had a primitive simplicity, for he arranged his blossoms symmetrically, surmounting the whole with a large and spectacular blossom, generally a striped tulip. He retained the integrity of individual blossoms by arranging them to avoid overlapping forms. Finally, he used light less to model his flowers than to illuminate them and bring out the brilliance of their colors.

Bosschaert, who left Middelburg in 1615, lived in Utrecht until he relocated to Breda in 1619. As is evident in two remarkable paintings of roses from 1618–1619 (figs. 30, 31), Bosschaert’s style evolved significantly during his Utrecht and Breda years, perhaps owing to the influence of Crispijn van de Passe’s Hortus Floridus (1614) and the still lifes of Röelant Savery, who had moved to Utrecht in 1618. During this period Bosschaert’s bouquets became more naturalistic, as he painted petals with softer, more velvety textures. While he continued to compose symmetrical bouquets surmounted by a single large flower, he arranged his flowers more informally, often overlapping individual blossoms. Bosschaert also began to introduce insects, dewdrops,
and deformities of leaves, all of which enhanced the naturalistic character of his bouquets.

Even as his style evolved, Bosschaert continued to follow his well-established working procedure throughout his life. Identical rose blossoms appear in each of these two bouquets of roses, which he also arranged according to a similar compositional schema. Yet subtle variations between the individual floral elements—for example, the placement of the deformations in the leaves or of the water droplets—demonstrate how he adjusted his models from one painting to another.

The interweaving of artificiality and naturalism in the artist’s work is particularly evident in the open stone niches he introduced as settings for his flower bouquets during his Utrecht period. On the one hand, Bosschaert used these niches to enhance a sense of illusionism by depicting shadows of leaves and blossoms along their illuminated inner edges and by situating vases and blossoms so that they protrude into the viewer’s space. On the other hand, like Savery (see fig. 27), Bosschaert utilized the niche motif to transform these flower still lifes into iconic images meant to be honored and admired. By juxtaposing these bouquets against open sky or an imaginative landscape, Bosschaert created a setting for them that was unrelated to everyday reality. Thus, while his bouquets contained naturalistic flowers and insects, his setting signaled that they con-
FIG. 32. Ambrosius Bosschaert the Elder, Bouquet of Flowers in a Glass Vase (cat. 11), 1621, oil on copper, National Gallery of Art, Patrons' Permanent Fund and New Century Fund
tained an abstract or allegorical message, one almost certainly analogous to that expressed in Van de Venne’s contemporary print (see fig. 28): even the smallest blossom serves as a reminder of the greatness of God’s creation.

Here, however, one enters into a fascinating, and vexing, area of interpretation, for how specific can one get in reading such paintings symbolically. In seventeenth-century Dutch society, which was deeply imbued with the idea that God’s presence was found in all of creation, the very act of painting and drawing realistically was viewed as rendering him honor. Moreover, certain flowers, such as the rose, lily, and violet, were traditionally associated with specific religious symbolism certainly known to Bosschaert and his contemporaries.

The extent to which artists included flowers for their inherent symbolism is difficult to determine, particularly when so little is known about the patronage of these works. It is unlikely that all elements in most Dutch and Flemish flower bouquets are infused with symbolic meaning, whether they be flowers, butterflies, or snails; in some still lifes, however, artists probably intended a broad religious symbolism. In Roses in an Arched Window (fig. 30) and Vase of Roses in a Window (fig. 31), for example, Bosschaert focused upon a flower with strong Christian symbolism. Indeed, these red, pink, and white roses are remarkably similar to those surrounding The Annunciation miniature of the Warburg Hours (see fig. 2). Bosschaert may also have intended the insects in these paintings to serve as both symbolic and naturalistic elements: the caterpillar and butterfly traditionally relate to the idea of death and resurrection, while the snail and butterfly suggest the earthly and the spiritual.77

The enhanced naturalism of Bosschaert’s late style is nowhere more evident than in his last known work, Bouquet of Flowers in a Glass Vase, signed and dated 1621, the year of his death (fig. 32). Even though this exquisite image includes a wide variety of species, among them a yellow iris, a red-and-white striped tulip, roses, a blue-and-white columbine, fritillaria, grape hyacinth, lily of the valley, and a sprig of rosemary, the flowers and herbs form a coherent, closely integrated ensemble. Bosschaert also introduced subtle tonal gradations in the background to reinforce the sense of light flooding the image.

Bouquet of Flowers in a Glass Vase occupies a special place in Bosschaert’s oeuvre, for its inscription, filling an illusionistic plaque attached to the table’s front, offers one of the most moving testaments to the artist’s enormous reputation at the time of his death: “C’est l’Angelicq main du grâc Peindre de Flore AMBROSE, renommé jusqu’au Riuage Mort” (It is the angelic hand of the great painter of flowers, Ambrosius, renowned even to the banks of death).78

The Bosschaert Dynasty

Ambrosius Bosschaert and Roelandt Savery established the parameters of seventeenth-century Dutch flower painting. Their styles, though individual, were similar enough that numerous artists drew inspiration from them both. One of the most fascinating of these is Christoffel van den Berghe, about whom little is known except that he lived in Middelburg from at least 1619 to 1628.79 Although only five of his still lifes and a few landscapes are yet extant, he was a gifted master who was well regarded in his day.

Most scholars assume that Van den Berghe studied with Bosschaert because the younger artist’s precise manner of painting resembles the older master’s style. However, the density and profusion of flowers in his masterpiece (fig. 33), dated 1617, share more stylistic characteristics with Roelandt Savery’s paintings than with Bosschaert’s (see fig. 29). Like Savery in his 1603 still life (see fig. 27), Van den Berghe placed his bouquet in a slightly battered stone niche enlivened by shells, Chinese porcelain cups, bugs, and numerous butterflies.80 Despite this animated composition, Van den Berghe’s flowers, particularly his tulips, are rather stiff, a quality that gives his painting a charming naïveté. Van den Berghe first registered with the Saint Luke’s Guild in Middelburg in 1619, two years after he painted this work. Thus, it is entirely possible that he trained elsewhere—perhaps Amsterdam, where he could have
known Savery after the latter’s return from Prague in 1615.

An artist who truly merged Bosschaert’s and Savery’s traditions was Balthasar van der Ast, whose work is the embodiment of Dutch and Flemish flower painting from the first half of the seventeenth century (see page 13). Van der Ast lived successively in Middelburg, where he learned his craft in the studio of his brother-in-law Ambrosius Bosschaert the Elder; Utrecht, where his style was influenced by the dynamic still lifes of Roelandt Savery; and Delft, where he painted during the height of tulip mania in the mid-to-late 1630s.

Van der Ast admired the delicacy and grace of flowers, but also their rarity and exoticism. He often arranged his bouquets in Wan-lí vases (see fig. 1), as though this expensive imported china was the most appropriate type of vessel for beautiful and costly flowers. To reinforce the sense of wonder engendered by these images, Van der Ast frequently included rare shells from distant seas, which he lovingly rendered to capture their varied textures, colors, and shapes. Regarded as treasures by collectors both large and small, shells, like rare bulbs, were highly valued and sought after. Van der Ast also wanted to create a lively image, made “naer het leven,” and thus delighted in animating his still lifes with lizards, snails, grasshoppers, spiders, butterflies, dragonflies—in short, with small creatures of all types.

FIG. 34. Balthasar van der Ast, Bouquet on a Ledge with Landscape Vista (cat. 4), 1624, oil on copper, The Henry H. Weldon Collection

FIG. 35. Balthasar van der Ast, Basket of Flowers (cat. 2), c. 1622, oil on panel, National Gallery of Art, Gift of Mrs. Paul Mellon

FIG. 36. Balthasar van der Ast, Basket of Fruit (cat. 3), c. 1622, oil on panel, National Gallery of Art, Gift of Mrs. Paul Mellon
One of Van der Ast’s most charming still lifes is this intimately scaled Bouquet on a Ledge with Landscape Vista, signed and dated 1624 (fig. 34). This small oil on copper is the only work by Van der Ast to include a fanciful landscape vista. One wonders if he painted it in conscious emulation of his master, Ambrosius Bosschaert, as a tribute to his memory, perhaps like the inscription in the Washington painting (see fig. 32). The densely compact arrangement of flowers resembles Bosschaert’s bouquets more than it does Van der Ast’s own loose and flowing arrangements during the mid-1620s (see fig. 1).

Van der Ast was highly esteemed during his lifetime. Two of his paintings (probably figs. 35, 36) were listed as “a basket with fruit and a basket with flowers,” in the 1632 inventory of the collection of the prince of Orange, Frederik Hendrik, and his wife Amalia van Solms. These pendant paintings complement each other thematically as well as compositionally. The combination of fruit, flowers, and rare shells creates a sense of the abundance and beauty of God’s creation. However, following an organizing principle previously encountered in the work of Joris Hoefnagel, Van der Ast conceived these works to represent the four elements. Fine china, here represented by precious Wan-li plates, symbolized fire; fruit signified earth; flowers, air; and shells, water.

Van der Ast’s individuality as an artist only became apparent in the mid-1620s, when he began to open his compositional arrangements by allowing flowers to reach out into space, as in Flowers in a Wan-li Vase (see fig. 1). His airy and light-filled mature style, which extended into his Delft period of the 1630s, produced some of the most rhythmic and imaginative still lifes in all of Dutch art. An outstanding example is Still Life of Flowers,
Shells, and Insects on a Stone Ledge (fig. 37), a tour de force notable for its conceit of using a rare shell to hold an elegant spray of flowers. Surrounding this central motif, Van der Ast created a circular arrangement of shells, flowers, and insects, an artificial construct that he unified through the overarching tendrils of the iris, columbine, and bellflowers (Campanula). Van der Ast’s light not only illuminates and models individual compositional elements, but also enlivens their forms. Finally, the painting demonstrates the artist’s extraordinary ability to allow air to circulate in and around his forms, a characteristic that, more than any other, brings life to his works.

Jan Brueghel the Elder

Jan Brueghel was a famous artist when in 1604 he visited the court of Rudolf II in Prague. The second son of Pieter Brueghel the Elder (c. 1525—169), Jan, who trained in Antwerp, had already traveled extensively and visited, among other artistic centers, Cologne, Rome, Naples, and Milan. In Milan he had met his lifelong patron Cardinal Federico Borromeo, who considered Brueghel’s works “the lightness of nature itself.”

And in Antwerp the Saint Luke’s Guild had elected him dean in 1602. The following year, Brueghel’s charmed life had been confronted with tragedy, for his wife Elizabeth had died while giving birth to Paschasia, a daughter who later would marry the painter Jan van Kessel the Elder (1626—1679) (see fig. 56). It was perhaps partially for this reason that Brueghel undertook his trip to Prague.

Although Brueghel stayed in Prague only a short while, he must have had an opportunity to see some of the splendid nature studies in Rudolf’s collection, perhaps even the ones the emperor had acquired that very year from Jacques de Gheyn. He also may have met Roelandt Savery, who had recently arrived from Amsterdam. One thing, however, is certain: he saw a painted miniature or a pattern book by Joris Hoefnagel that inspired him to paint a small copper depicting a spray of rosebuds and a mouse. When Brueghel sent this small painting to Borromeo in July 1605, the cardinal commented, “no one has ever seen the like in oils, painted so painstakingly and in such detail.”

Brueghel returned to Antwerp filled with the idea of painting flower still lifes—large, imposing still lifes bursting with flowers of all types. In a letter of 1606 he described one such bouquet that he was painting for the cardinal:

[It] will succeed admirably: not only because it is painted from life but also because of the beauty and rarity of various flowers which are unknown and have never been seen here before: I therefore went to Brussels to portray a few flowers from life which cannot be seen in Antwerp.

Brueghel’s painting for Borromeo, which still exists, contains over one hundred different floral varieties, including eight species of tulip, five types of iris, and at least nine forms of narcissus.

In 1608 Brueghel sent the cardinal a smaller bouquet, which was so successful that the artist soon began making comparably intimate flower paintings for other collectors. One such work, Flowers in a Glass Vase (fig. 38), exhibits Brueghel’s spirited style—the blossoms almost seem to come alive through the sensitivity of his touch. In this bouquet of tulips, carnations, narcissi, poppy anemones, forget-me-nots, larkspurs, and a pink rose, he captured not only the rhythm of leaves and blossoms, but also the translucency of petals and nuances of colors that few other artists could match. He delighted, as well, in suggesting the transparency of the glass vase and in capturing the sparkle of light animating the rosettes and ridges along its surface.

Brueghel’s letters to Cardinal Borromeo provide rare insights into the working method of this early seventeenth-century flower specialist. They indicate not only that he made trips to distant cities to find rare and unusual blossoms, but also that he waited entire seasons for flowers to grow. Brueghel stressed that he painted rare and beautiful flowers directly from nature without
A Basket of Mixed Flowers and a Vase of Flowers (fig. 39) juxtaposes the natural splendor of a wicker basket overflowing with cut flowers, including tulips, buttercups, roses, anemones, and columbine, with a Venetian-style glass containing discreetly arranged tulips, buttercups, and other delicate field flowers. This combination of elements emphasizes the freshness of the cut flowers, for it suggests that the vase has just been filled with blossoms recently brought from the garden. Brueghel’s sensitive handling of paint, which ranges from thick impastos to thin glazes, creates delicate and effervescent forms imbued with extraordinary naturalness.

The Idea of Earthly Transience
Inevitably, the fullness of Brueghel’s artistic vision also touches upon the fundamental concept of *Arts longa, vita brevis*. God’s wonders on earth were boundless, but the beauty of flowers, like life itself,
is transient. As Borromeo himself remarked, these painted flowers will continue to blossom long after nature’s flowers have withered and died.

Flowers and flower paintings occupied a fascinating role in contemporary appraisals of the relationship of objects in the natural world to God and his divinity. On the one hand, the beauty and variety of flowers symbolized the richness of nature, God’s creation; on the other hand, contemporary moralizing texts and numerous passages in the Bible equated flowers with the concept of transience. The most famous of these texts is Psalm 103, verses 15–16:

As for man, his days are as grass: as a flower of the field, so he flourisheth.
For the wind passeth over it, and it is gone; and the place thereof shall know it no more.

The idea of transience is not expressly indicated in most flower paintings from the beginning of the seventeenth century. Nevertheless, in the midst of these celebrations of God’s bounty, artists began to interject subtle reminders of the ephemeral nature. In fact, some of the very elements that made flower bouquets more lifelike, such as deformed leaves (see figs. 30, 31) or earth-bound insects like caterpillars, worms, and grasshoppers (see figs. 33, 34), could be viewed as indicators of life’s inevitable decay. Such subtle reminders of transience in flower bouquets have to be seen within the context of expressly conceived vanitas images, in which flowers are brought together with skulls and hourglasses, and even admonishing texts, as warnings about the transience of life (see fig. 56).

Daniel Seghers and Jan Philips van Thielen
Cardinal Borromeo was an extraordinarily gifted man, as passionate about art as he was about the Catholic faith. He also understood the power and impact of images on man’s spiritual belief. As with many of his generation, he had been greatly troubled by the iconoclastic attacks, particularly on venerated images of the Virgin, that had occurred during the 1560s and 1580s in the Netherlands. By 1600 Catholic theologians throughout Europe had placed much emphasis in reinstating the importance of sacred images of the Virgin, not only by adorning them with new crowns and jewels but also by draping them with garlands of flowers.

After receiving Brueghel’s remarkable flower paintings in 1606 and 1608, the cardinal recognized that Brueghel’s ability to simulate real blossoms could be utilized for religious purposes. Thus, as early as 1608, Borromeo asked Brueghel to paint a garland of flowers around an image of the Madonna. Brueghel enthusiastically agreed and created a work that drew upon the pictorial tradition of illuminated manuscripts, in which flowers surround religious scenes (see fig. 2), and upon the actual practice of draping flowers around venerated images of the Virgin. Brueghel’s garland painting for Borromeo contains just such a sacred image: a Madonna and child, executed on silver by Hendrick van Balen (1575–1632), inserted into the middle of the panel.

Although Brueghel, in collaboration with Van Balen and other figure painters, first developed this new genre of still-life painting, the artist most renowned for depicting garlands of rare and beautiful flowers was Brueghel's most important student, Daniel Seghers (fig. 40). Seghers, who converted to Catholicism and entered the Jesuit order in 1615, was a devoutly religious man. He painted extensively for the Jesuits, who often presented Seghers' works as tokens of honor and esteem to rulers and dignitaries throughout Europe. Indeed, to judge from the accolades Constantijn Huygens and Cornelis de Bie heaped upon his work, the incredible illusionism of Seghers' flowers elicited awe and admiration throughout Europe.95

Seghers' paintings of garlands, like Brueghel's, were collaborative efforts, as, for example, with this beautiful depiction of a garland around an Annunciation scene, which Seghers executed together with Cornelis Schut the Elder (1597–1655), a prolific religious painter who worked in Antwerp in the style of Rubens.96 Seghers hung the garland of flowers from illusionistically rendered blue ribbons supporting the painted frame of the Annunciation. In contrast to Brueghel, who created a circular arrangement of flowers around the central religious image, Seghers concentrated his flowers into two areas, those crowning the Annunciation and those forming a semicircular enframement around the other three sides.
Seghers used his crisp, yet elegant style to render an extremely wide range of cultivated garden flowers, from expensive striped tulips, roses, and anemones, to narcissi, irises, and fritillaries. He had a great gift for harmoniously arranging differently colored and shaped flowers to create a vibrant and joyous surround for the miraculous event transpiring in Schut’s image. Indeed, it is fascinating to compare the different moods established in the dynamic relationship between the floral motifs and religious images in this work and those in the Annunciation scene in the Warburg Hours, in which the flowers and figures are far more restrained and contemplative (see fig. 2).

Jan Philips van Thielen (1618–1667) learned the art of flower painting from Seghers, with whom he studied shortly before entering the Antwerp Saint Luke’s Guild in 1641/1642. Although Van Thielen also painted a number of garlands surrounding religious images, he was at his best in small paintings that include only a few blossoms (fig. 41). In this tabletop still life, he focused his carefully considered compositional arrangement around three large blossoms, a large red-and-white striped tulip at its apex and pink and white roses situated near the rim of the tear-shaped glass vase. Interspersed on diagonal axes between these blossoms are a variety of smaller purple, blue, and white flowers, including two violet bellflowers (Campanula), three white tussock bellflowers (Campanula carpatica), and a deep blue cornflower. Van Thielen’s technique for modeling blossoms with planes of color is more abstract and less descriptive than that of his master, but it effectively captures the fresh diaphanous character of individual petals.

The painting’s appealing simplicity and intimacy serve as reminders that most Dutch and Flemish flower still lifes were painted for the privacy of the home. Van Thielen’s compositional restraint is reinforced by his sensitivity toward color harmony and by the clarity with which he conveyed the geometrical structure of the individual flowers. As in this work, he generally represented short-stemmed, emerging blossoms with a minimum of overlapping, avoiding the elegantly interwoven compositions containing long-stemmed blossoms past their prime preferred by most of his contemporaries.

**Tulipmania and Seventeenth-Century Portraits of Flowers**

The artists who specialized in flower paintings were exceedingly well paid. Emperors, princes, cardinals, and other wealthy collectors sought their services, while poets and critics eulogized their achievements. Much of their success was due to their own artistic abilities, for they did create remarkably illusionistic paintings that seem able to deceive insects or to produce the very odors of real blossoms. Nevertheless, these artists also owed part of their economic success to the fascination flowers held for their contemporaries. It is most unlikely that Ambrosius Bosschaert, Roelandt Savery, Jan Brueghel the Elder, or Daniel Seghers would have received such vast sums for their works had not flowers themselves been so enormously valued. One can imagine the quandary of Cardinal Borromeo when Brueghel wrote: “Under the flowers I have painted a jewel with coins…. It is up to your honour to judge whether or not flowers surpass gold and jewels.”

Today, the idea that the rarity of flowers depicted in a still life might affect the painting’s value is difficult to comprehend, but such considerations were important for seventeenth-century collectors. On the other hand, one can scarcely imagine trading a house for a tulip bulb, but that, of course, happened at the height of speculation during tulipmania in the mid-to-late 1630s. The variety of shapes and colors of tulips fascinated everyone, and just as speculators were willing to pay enormous sums for new hybrids, so were collectors eager to see them represented in works of art. And Dutch and Flemish artists, whether strongly influenced by such economic factors or not, clearly developed a great affinity for depicting the tulip. This exotic flower appears in virtually all painted bouquets during the first four decades of the seventeenth century.

The importance of tulips in Dutch horticulture is nowhere more evident than in the appearance of tulpenboeken, tulip catalogues illustrated with paintings...
of individual tulips. These books were probably commissioned by floriculturists who wanted to provide a visual catalogue of the dizzying array of blossoms they could offer for sale. Such catalogues served a real purpose because buyers bid on bulbs, and thus needed some indication about the type of blossom they might expect to see.10

One of the artists most active in producing these books was Jacob Marrel (1614–1681), who prided himself in depicting tulips “naar ’t leven” (figs. 42, 44).100 These two sheets come from one of the most magnificent of his tulip books, dated 1642, which contains a title page (fig. 43) and no fewer than ninety-five separate specimens, each identified in elegant calligraphic lettering.101 The tulips’ names, which range from Admiral d’Hollande to Geel en Root van Leven (Yellow and Red of Life), reflect a great sense of pride and national identification, qualities Marrel captured in his carefully objective, yet slightly idealized images.

Marrel’s Tulpenboek is also of great historical interest because it contains a list of the prices paid for the tulips during the tulipmania of 1635, 1636, and 1637, a period Marrel described as “de op-en ondergang van flora” (the rise and fall of flora). Although unbridled speculation
was widely criticized during tulipmania, interest in tulips remained strong after the fall of the market. Not only did prices remain relatively high, which probably explains the appearance of Marrel’s 1642 Tulpenboek, but artists continued to find ways to include this fascinating flower in their still lifes.

Late Seventeenth- and Early Eighteenth-Century Flower Studies and Florilegia

Many artists specialized in tulip books, including Pieter Holsteyn the Younger (c. 1614–1673). Although not as famous as Jacob Marrel, Holsteyn, who worked primarily in Haarlem and Amsterdam, was a versatile artist who made watercolor and bodycolor paintings of numerous flowers, insects, and birds.
Two of his finest works, images of carnations (figs. 45, 46), possess his characteristic linear sensitivity, which allowed him to suggest the plants’ delicate and ephemeral nature.

Holsteyn was one of the artists commissioned by Agnes Block to create drawings of her collection of exotic birds and rare plants. A wealthy owner of an extensive botanical garden on her country estate, Vijverhof, along the river Vecht, Block, like many such collectors, enthusiastically traded, exchanged, cultivated, and hybridized plants to acquire new and exotic species. Holsteyn made drawings of flowers and birds for Block from about 1670, when she purchased her estate, until 1673, the year of his death. Although his drawings of carnations have not been specifically connected to one of the two large albums belonging to Block that appeared at an Amsterdam sale of 1736, the watercolors were probably part of such an ensemble. Most finished flower drawings executed after midcentury were made by artists in direct contact with wealthy plant lovers, many of whom apparently wanted the images of their plants preserved in florilegia similar to those developed in the late sixteenth century by Jacques Le Moyne de Morgues (see fig. 18).

Herman Saftleven (1609–1685) was also associated with Agnes Block’s efforts to record plants she collected and cultivated. Block engaged him, along with Pieter Withoos (1654–1693) (see fig. 52) and a number of other artists, to continue her enterprise after Holsteyn’s death. Saftleven was a particularly interesting choice since this prolific Utrecht artist had previously specialized in landscapes and topographical views. Nevertheless, once called upon by Block to participate in this project, he created some of the most vibrant botanical images of the late seventeenth century. One of his earliest known works for Agnes Block is A Mullein Pink (fig. 47), which he made in 1680 when he was seventy-one years old. Its colorful and densely expressive forms, which betray the mind-set of a painter, are strikingly different from the linear elegance of images by flower specialists such as Holsteyn and Withoos.

A spectacular late seventeenth-century florilegia is Julius François de Geest’s Jardin de rares et curieux fleurs (figs. 48, 49).
This exquisite manuscript illustrates 235 different plant species—all sumptuously colored and decoratively arranged on vellum sheets. As in the page depicting a narcissus, red snapdragon, and jonquils and in that representing a fritillaria, Johnny-jump-ups, and vinca, De Geest (c. 1639–1699) often combined different species, much as they would have been planted in contemporary gardens. De Geest’s compositions are fundamentally formal and symmetrical, and he remains true to his primary goal of providing botanically accurate portraits of individual flowers. Nevertheless, his gentle overlappings of forms and sensitivity to the rhythmic flow of the various species create an unusually lifelike depiction of a garden environment.

De Geest, whose uncle was Rembrandt van Rijn (1606–1669), probably learned the art of flower painting in Antwerp, where he studied with Erasmus Quellinus II. By the 1660s De Geest had returned to his native Leeuwarden, where he executed this florilegium. He may have been commissioned to paint this volume by Count Willem Frederik of Nassau, stadhouder of the Province of Friesland, who had constructed a magnificent garden on one of Leeuwarden’s ramparts. De Geest’s creative arrangements of flowers resemble a florilegium painted in 1654 by Johann Walther for a German relative of the stadhouder, Count Johann of Nassau-Idstein.

Another artist who specialized in elegant and rhythmic images of flowers was Jan Withoos (1648–c. 1685) (figs. 50, 51), who belonged to a family renowned for its botanical illustrations. Flower and insect studies were made not only by his father Matthias (1627–1703), with whom he studied, but also by his sister Alida (1669–1730) and his brothers Pieter and Frans (1657–1705). Although Jan is the least documented of the four artistic siblings, his three-volume collection of watercolors, consisting of 263 studies of flowers and plants on large vellum pages, is one of the most magnificent florilegia of the late seventeenth century. The patron for this exceptional work was probably the important Amsterdam bibliophile Paulo van Uchelen, who was a passionate collector of illustrated books and manuscripts. Withoos’
three-volume manuscript, with its beautiful gilt-leather binding made by Van Uchelen’s binder Albert Magnus, was featured in the 1703 auction of Van Uchelen’s “splendid collection of art and books.”

Not only did Withoos have a remarkable sensitivity to the unique characteristics of each flower, he had a genius for placing his images on the white expanse of his page. For example, Withoos filled his sheet when depicting the flowing tendrils of a morning glory, while he relegated low-growing Johnny-jump-ups to the bottom half of the page. To provide more information about the cyclamen plant, Withoos depicted it growing from a small mound of earth, a pictorial device first utilized by Crispijn van de Passe the Younger in 1614 (see fig. 20). While the pictorial concept is similar, a comparison between Van de Passe’s tightly compacted plant and Withoos’ delicate and ethereal forms reveals the

contrasting artistic sensitivities of flower specialists at either end of the seventeenth century.

At the time of the French invasion of The Netherlands in 1672, Matthias Withoos moved with his family to Hoorn because this prosperous maritime city in North Holland was far from the disruptive forces of the French armies. It was there, in Hoorn, that Pieter Withoos executed this fluidly rhythmic drawing of a fritillaria (fig. 52), one of a series of watercolors of flowers from the garden of Louis de Marie of Haarlem. Hoorn was also the home of other artists who made scientifically precise watercolor flora and fauna on vellum: Johannes Bronkhorst (1648–1727) and his student Herman Henstenburgh (1667–1726). Henstenburgh’s son, Antoni, continued this tradition throughout the first half of the eighteenth century, creating exuberant sheets such as this study of tulips (fig. 53). Here, in a manner far different from that of Jacob Marrel (see figs. 42, 44), every stem, leaf, and petal of these magnificent blossoms seems alive with movement. Antoni executed this sheet with a special kind of watercolor, devised by his father, which was renowned for being so bright and robust that it rivaled oils.

Willem van Aelst and Jan Davidsz. de Heem

The stylistic changes evident in the work of Withoos and Henstenburgh in the late seventeenth and early eighteenth centuries first made their appearance in the work of two outstanding and innovative painters, Willem van Aelst (1626–1683) and Jan Davidsz. de Heem (1606–1684). Although Van Aelst and De Heem came upon their stylistic and thematic ideas independently, each created dynamic, even exhilarating, compositions that fully engage the viewer emotionally and, perhaps, spiritually. As is evident in Van Aelst’s Vanitas Flower Still Life (fig. 54) and De Heem’s View of Flowers (fig. 55), each was a master craftsman, capable of rendering the delicacy of petals, the translucency of glass, or the wetness of dewdrops on leaves. Each understood the power of light to help create illusionistic effects that could bring a painting to life.

Van Aelst, who was born and raised in Delft, joined the city’s Saint Luke’s Guild in 1643. Shortly thereafter he left for France and Italy, where he assisted the Dutch still-life painter Otto Marseus van Schrieck (1609–1672) while the latter worked for the grand duke of Tuscany, Ferdinand II de’ Medici, who had extensive botanical gardens. Since Van Aelst’s mature flower paintings have little direct relationship to earlier Dutch still-life traditions, he most likely developed his elegant and courtly style while working for the grand duke, who presented the artist with a gold medal and chain for his service. After returning to The Netherlands in 1656, Van Aelst achieved tremendous success. Not only was he extremely well paid for his works, but his artistic genius was eulogized by the poet Jan Vos.

De Heem, on the other hand, was fully immersed in Dutch and Flemish pictorial traditions from the very beginning of his career. Born in Utrecht, he began his training there with his father shortly after the appearance of Van de Passe’s Hortus Floridus, and just as Roelandt Savery, Ambrosius Bosschaert, and Balthasar van der Ast were defining the very essence of flower painting. When the family moved to Leiden in 1626, De Heem began painting in the manner of the Leiden painter David Bailly (1584–1657) and created a number of monochrome still lifes with vanitas themes that include books, writing and smoking implements, skulls, and hourglasses.

After De Heem moved to Antwerp in 1635, he transformed his subject matter and style once again. Inspired by Daniel Seghers’ compositional sensitivity and elegant rendering of blossoms, De Heem began painting flower bouquets, many of which incorporated religious symbolism. He also began creating elaborate banquet scenes, filled with colorful drapery, flowers, fruit, and lobsters, as well as luxurious pieces of silver, porcelain, and glass. He continued to produce such works after returning to Utrecht in 1649, thereby transforming the character of both Dutch and Flemish still-life painting.
De Heem heeded the lessons learned from the earlier generation of still-life painters—for example, the value of one large, centrally placed blossom, a motif he exploited for dramatic compositional effect in *Vase of Flowers*. Nevertheless, he transformed earlier stylistic traditions to create works that had a new sense of compositional freedom. His loosely conceived, asymmetrical floral arrangements consist of numerous overlapped blossoms, where elongated plant stems establish flowing rhythms for his dynamic yet harmonious compositions. As with Van Aelst’s *Vanitas Flower Still Life*, the immediacy of the scene is enhanced by the wheat and flowers protruding over the front edge of the illusionistically painted marble table.

The differences in their training and life experiences are reflected in their artistic ideals. In *Vase of Flowers* De Heem reveled in the multiplicity of creation, not only with the cornucopia of plants and flowers, but also with the minute insects that crawl about their stems and blossoms. As poppies, tulips, roses, wheat stalks, and peas reach out in organic rhythms, butterflies flutter about as though the air around them were ripe with the varied aromas of the richly laden bouquet. Van Aelst, on the other hand, focused his vision on a limited number of compositional elements, ones he carefully selected and boldly depicted. For example, *Vanitas Flower Still Life* is dominated by the asymetrically twisting form of the hollyhock, which rises from a dense cluster of flowers, including a pink rose, orange marigold, and white chrysanthemums.

Van Aelst intended this elegant and dramatically lit composition to serve as a reminder of the transience of life. An open watch, with its key attached to a shimmering blue ribbon gracefully draped over the front of the marble table, symbolizes the passage of time. This striking vanitas element is accompanied by other reminders of death and decay: a spent rose blossom in the middle of the bouquet, deformed leaves, and a curious little mouse who is reminiscent of the mouse in Van de Passe’s *Hortus Floridus* (1614) (fig. 21). However, the hovering dragonfly offers the promise of salvation, for, like butterflies, dragonflies only attain their beauty and freedom after their “worldly confinement” in cocoons. The moralizing approach taken by Van Aelst in *Vanitas Flower Still Life* is consistent with seventeenth-century traditions of vanitas images, in which flower still lifes were joined with objects such as hourglasses and skulls to convey the notion of life’s transience. The light of truth since it opens at the break of day and is closed in the dark of night. Grains of wheat symbolize not only the bread of the Last Supper, but also the Resurrection because grain must fall to earth to regenerate. Like wheat, man must die and be buried before achieving eternal life.

De Heem was quite consistent in his philosophical approach, and even when paintings contain no explicit symbols of death or resurrection, he apparently intended symbolic associations for flowers and other plants. In *Vase of Flowers*, for example, the message that man can achieve salvation through faith is suggested by allusions to the cross in the subtle reflection of a mullioned window on the glass vase. De Heem further reinforced this message through the types of flowers and plants he included in his bouquet. The prominent white poppy, which was associated with sleep and death, often referred to the Passion of Christ. The morning glory indicated the light of truth since it opens at the break of day and is closed in the dark of night. Grains of wheat symbolize not only the bread of the Last Supper, but also the Resurrection because grain must fall to earth to regenerate. Like wheat, man must die and be buried before achieving eternal life.

De Heem also painted vanitas scenes but he emphasized, to a much greater extent than did Van Aelst, that eternal life was possible for those who truly believe in the Christian message. In one instance, De Heem expressly conveyed his theological message by including a crucifix along with the flower bouquet, skull, and the written warning “but one does not turn to look at the most beautiful flower of all.” Moreover, to reinforce his religious message, this Catholic artist utilized explicit plant symbolism to a much greater extent than had flower painters from the first decades of the century.

De Heem was quite consistent in his philosophical approach, and even when paintings contain no explicit symbols of death or resurrection, he apparently intended symbolic associations for flowers and other plants. The Impact of De Heem and Van Aelst on Dutch and Flemish Still-Life Traditions

Another flower painting that also uses explicit symbolism to offer the hope of salvation for those who lead a pious life is Jan van Kessel the Elder’s Vanitas Still Life (fig. 56). Van Kessel, a prolific artist whose father-in-law was Jan Brueghel the Elder, would have come into contact with De Heem when the latter lived in Antwerp. Like De Heem, Van Kessel understood the powerful emotional impact of an image of the human skull. Despite the delicacy of the roses and morning glories, the fluttering of butterfly wings, and the effervescence of soap bubbles, one’s eye stays riveted to this grim reminder of death. The hourglass and the bubbles rising from a gold watchcase merely reinforce the central message that, with time, life on this earth vanishes like soap bubbles or withers away like flowers.\(^{119}\)

Nevertheless, Van Kessel’s vanitas painting is not pessimistic, for the skull wrapped in dried wheat, the butterflies, and the flowers all offer the promise of resurrection and salvation. The symbolism of Van Kessel’s flowers, which include the morning glory and roses, reinforces this message.\(^{120}\)

Although

\(^{119}\) vanitas painting

\(^{120}\) Although

FIG. 56. Jan van Kessel the Elder, Vanitas Still Life (cat. 20), c. 1665, oil on copper, National Gallery of Art, Gift of Maida and George Abrams

FIG. 57 (opposite page). Cornelis de Heem, Still Life of Fruit and Flowers with a Roemer (cat. 15), mid-1660s, oil on canvas, Private Collection, Washington
roses were commonly used to symbolize the brevity of life, when placed in conjunction with a skull wrapped in wheat, they allude to the Resurrection.\textsuperscript{121}

De Heem applied similar compositional principles to banquet pieces and flower bouquets—principles that his most faithful pupils, including his son Cornelis de Heem (1631–1696), developed in numerous works. Cornelis’ sparkling \textit{Still Life of Fruit and Flowers with a Roemer} (fig. 57), probably painted in the mid-1660s after he had returned to Utrecht from Antwerp, has a dynamically spiraling composition of the type he would have learned from his father. Cornelis encourages the eye to flow from the silver-handled knife in the lower left, through the peeled orange and the fruit in the Wan-li dish, past the pink roses and platter with fish and onions before arriving, via the circling vine, at the roemer and tall flute in the background. Cornelis de Heem, who shared his father’s predilection for integrating religious concepts into his still-life paintings, must have intended the prominent wine glass encircled by a spray of green leaves to have eucharistic connotations, particularly since it is placed in conjunction with a platter of fish.\textsuperscript{122}

Van Aelst’s primary influence was on a number of artists who worked in Amsterdam, where he settled after returning from Italy. He inspired artists like Rachel Ruysch (1664–1750) not only to paint asymmetrical flower bouquets, but also to concentrate on fewer compositional elements in their works. Nicolaes Lachtropius (active in Amsterdam from 1656–1687, and in Alphen aan den Rijn from 1687–c. 1700), who began his career at the very moment Van Aelst returned from Florence, was the master most directly influenced by Van Aelst’s dramatic new style. Lachtropius aspired to the same elegant and dynamic concepts, often directly modeling his compositions and even choices of flowers on Van Aelst’s work. For example, in \textit{Bouquet of Flowers on a Marble Ledge} (fig. 58), signed and dated 1680, Lachtropius patterned his boldly asymmetrical composition on a Van Aelst model, even placing his bouquet on a marble ledge, one of Van Aelst’s most characteristic motifs.\textsuperscript{123}

Among the individual floral motifs he adapted from this artist are the large red poppy seen from behind and the yellow marigold in the center of the composition (see fig. 54). Lachtropius, however, differed from Van Aelst in his handling of light. He created stark contrasts between brightly colored blossoms and the surrounding darkness, an approach that also allowed him to emphasize the almost surreally illuminated butterflies fluttering around the flowers.\textsuperscript{124}

Simon Verelst (1644–1721) can hardly be called a follower of Van Aelst, for he had an independent flair that cannot easily be identified with a preexisting tradition. Nevertheless, this artist from The Hague created still lifes with a boldness of vision that shares certain of the older master’s stylistic characteristics.\textsuperscript{125} He learned from Van Aelst how to focus his forceful compositions around a few elements. However, even Van Aelst never approached the haunting simplicity of Verelst’s modestly scaled \textit{Double Daffodils in a Vase}, which he probably painted in the mid-1660s (fig. 59). The composition’s clarity of form is unique for this period. Its underlying geometry and narrow tonal range, which consists of pale greens and pinks against an ochre-and-brown backdrop, help establish the image’s calm and restful appearance. And its daffodils, like all Verelst’s flowers, have precisely that nobility of form so admired by Johann Theodor de Bry in his \textit{Florilegium} of 1612 (see fig. 22).

\textbf{Jan van Huysum}

Jan van Huysum (1682–1749), more than any other artist before or after, could capture the sheer joy of a profuse array of flowers and fruit. In each of these two superb examples (figs. 60, 61), flowers overflowing their terra-cotta vases, and peaches and grapes on the foreground ledges, create a sense of opulent abundance. Woven in and out of the densely packed bouquets of roses, morning glories, hyacinths, auriculae, irises, and narcissi are the rhythmically flowing stems and blossoms of tulips, poppies, and carnations.
Van Huysum’s lasting fame has centered on his exuberant arrangements and technical virtuosity. He could convey both the varied rhythms of a striped tulip’s petal and the glistening sheen of its variegated surface. He masterfully integrated insects into his bouquet, as well as suggested the translucence of dewdrops on petals and leaves. He delighted in enhancing the flowers’ vivid colors, primarily pinks, yellows, oranges, reds, and purples, with striking light effects that add to the visual richness. He often illuminated blossoms situated at the back of the bouquet, against which he silhouetted darker foreground leaves and tendrils.

Although Van Huysum was trained by his father, Justus van Huysum the Elder (1659–1716), his compositional ideals and technical prowess derive from the examples of Jan Davidsz. de Heem (see fig. 55) and Willem van Aelst (fig. 54). Following De Heem’s lead, Jan van Huysum organized his bouquets with sweeping rhythms that draw the eye in circular patterns throughout the composition. Like his predecessor, he also included flowers that do not bloom at the same time, for example, tulips and morning glories. From Van Aelst, on the other hand, Van Huysum learned the advantages of massing brightly lit flowers to focus the dynamically swirling rhythms underlying his compositions.

The dark backgrounds of these paintings are characteristic of works he painted in the second decade of the eighteenth century.
One contemporary critic explained that "Van Huysum painted his flowers and fruit for many years on dark backgrounds, against which, in his opinion, they stood out more, and were better articulated." Responding to the evolving tastes of his patrons, he eventually changed his style and situated his floral bouquets against light backgrounds, many of which were outdoor garden settings.

Just how Van Huysum executed his works has never been determined because he was a secretive artist, forbidding anyone, including his own brothers, to enter his studio for fear that they would learn how he purified and applied his colors. However, it seems that he painted at least some of his flowers from life. In a letter reminiscent of the one Jan Brueghel sent to Cardinal Borromeo, Van Huysum explained to a patron that he could not complete a still life that included a yellow rose until it blossomed the following spring. Indeed, this Amsterdam artist’s keenness for studying flowers led him to spend a portion of each summer in Haarlem, then, as now, a horticultural center. Nevertheless, the remarkable similarities in the shapes and character of individual blossoms in these two still lifes (figs. 60, 61) indicate that he also adapted drawn or painted models to satisfy pictorial demands.

While no individual studies of flowers can be attributed with certainty to the master, Van Huysum did make exceedingly expressive compositional studies (figs. 62, 63). He approached these works as a painter rather than as a draftsman, using a complex array of techniques, which include oil-soaked charcoal, pen lines, and ink wash, to capture the broad patterns of light and shade flowing across his forms. Although it is generally thought that he did not use these studies as a basis for his paintings, the squaring lines on the drawing dated 1723 suggest otherwise.
The Flower Painter as Pictura

Visual language, like spoken and written language, draws upon a variety of sources and traditions. When expressed by great artists who through intuition or training have understood its fundamental structures and nuances, that language can capture the essence of its culture and enrich its meaning. Jan van Huysum was the most compelling Dutch visual "linguist" of the early eighteenth century, for the elegance and delicacy of his masterful still lifes mirror the refinement of Dutch society at that time. Van Huysum’s language was immediately understood by his contemporaries, and he was lavishly praised and highly paid for his services. Often referred to as the Prince of Flower Painters, he counted among his patrons not only the Dutch elite, but also kings, dukes, and counts of England, France, and Germany.

Van Huysum’s success and accolades culminate an imposing list of still-life painters whose work princely collectors sought to acquire. His predecessors—including Joris Hoefnagel, De Gheyn, Savery, Bosschaert, Van der Ast, Jan Brueghel, Seghers, Van Aelst, Jan Davidsz. de Heem, and Verelst—had worked for the upper echelons of society and were among the highest paid and most revered artists of their day. Each depicted works that captured the essence of his society’s aspirations, beliefs, and cultural concerns. Nevertheless, despite their artistic contributions and tremendous success, theorists ranked still-life painters at the lowest echelon in the hierarchy of painting.

This discrepancy between artistic achievement and theoretical status revolved around intellectual arguments concerning the position of the artist in society, arguments that hinged on the relationship of painting to the liberal arts. In these discussions a fundamental distinction was made between artists, those who dealt with abstract ideas such as ones found in history paintings, and craftsmen, those who used materials without imagination or intuition. This perception, which had its origins in sixteenth-century Italian humanism, was transported to the north in the theoretical writings of Karel van Mander and became part of the framework of Dutch seventeenth-century art theory.

This distinction had a particular impact on the status of still-life painters because such a high premium was placed upon their ability to observe precisely and execute skillfully. Still-life painters were only truly successful when they depicted the colors, textures, and organic rhythms of flowers in a convincing and lifelike manner. As a result, theorists rarely acknowledged that still-life painters used their imagination and intuition, or that they infused their works with moral concerns and spiritual ideals.

This attitude, which continued throughout the seventeenth century, underlies one of the more intriguing paintings of this period, an allegorical portrait by Michiel van Musscher (1645–1705) that depicts a seated female artist presenting her painting of a floral bouquet (fig. 64). Resplendent with her white gown, and finely curled coiffure, the artist proudly wears a portrait medallion given to her as a token of appreciation by a patron. Her artistic achievements are trumpeted by the flying figure of Fame as a putto crowns her with a laurel wreath.

Although the identity of the artist Musscher represented has been disputed, she is almost certainly Rachel Ruysch, an older contemporary of Van Huysum’s who was also greatly admired in court circles throughout Europe. Expressions of Ruysch’s artistic success, however, are only part of Musscher’s concern. He has situated the painter in an elegant interior amidst numerous objects that emphasize the importance of still-life painting within a broader humanistic context. Most important, Minerva, patroness of the arts, stands behind the painter’s outstretched arm and looks approvingly upon Ruysch’s finished, already framed, still life. Musscher further indicated the importance of still life as a genre by positioning Ruysch’s still life before a large history painting that is part of the illusionistically painted architecture. Indeed, the brush she holds in her outstretched hand as she points at

FIG. 64. Michiel van Musscher, Allegorical Portrait of an Artist, Probably Rachel Ruysch (cat. 22), c. 1680/1685, oil on canvas, North Carolina Museum of Art, Raleigh, Gift of Armand and Victor Hammer
the still life also draws the viewer’s eye to
the figures in this history painting.

Musscher’s allegory suggests that Ruysch’s still life commands respect
because the artist herself was a humanist.
While the piece of chalk resting on the
easel and the two monkeys playing
beneath it refer to Ruysch’s ability to
COPY nature faithfully, the classical sculp-
ture and music on the table beside her
indicate her own humanistic interests.
These interests, as well as her imagina-
tion, allow her to arrange the fruits
and flowers lying near her feet into the
harmonious, balanced composition of
the painted still life.

Musscher’s allegory, however, is more
than a celebration of one artist’s achieve-
ments or even of the significance of
flower painting within the hierarchy of
art. Underlying its symbolic program is
the celebration of painting itself, for
Ruysch here assumes the guise of Pic-
tura, the personification of painting who
practices this noble art with great flour-
ish, dignity, and intelligence.\textsuperscript{137}

It seems entirely possible that the
gradual theoretical acceptance of flower
painting at the end of the century came
about because of the increasingly decora-
tive quality of works produced by artists
like Rachel Ruysch and Jan van Huysum.
Even though their paintings no longer
appear to incorporate moral and religious
concepts, so fundamental to history paint-
ing, their involved compositions leave no
doubt about the imaginative capacities of
their fertile minds.\textsuperscript{138}
1. The underdrawing visible on the pink rose is based on one such study.
2. Hendrick Hesekam, Dictionarium, sive woorde-boeck, begrijpende den schat der Nederlandtsche tale, met de Engelsche yntelligte, 2 vols. (Rotterdam, 1648); second edition by Daniel Marly (Rotterdam, 1675—1678). The translation of this phrase in the English-to-Dutch section read: “to paint lively, Na’t leven schilcken”, “Painted lively, No leven gheheten, of-gheest sleeliekthatry.” In the Dutch-to-English section, the translation reads: “so het leven schilken, To Paint or Counterfeit to the life.”
3. For Borromeo, see Pamela M. Jones, “Federico Borromeo as der Nederlandtsche tale, met de Engelsche ofte woorden-boeck, begrijpende den schat Manly (Rotterdam, 1675—1678). Dutch-to-English section, the trans-af-gheset ofte gheconterfeyt.” In the such study.
8. The Weihing Han may be found at the Library of Congress, Wash-ington, Rare Book Collection, MS 13. Marilyn Sokstad and Jerry Sannard, Garden of the Middle Ages [exh. cat., Spencer Museum of Art, University of Kansas] (Lawrence, Kan., 1985), 98—99, no. 1.
9. See note 7 for the symbolism of the strawberry plant.
12. Pedacius Dioscorides was a Greek physiciain from Asia Minor who served in the army of the emperor Nero. His treatise De meste-nis medicina, which was frequently republished in the sixteenth cen-tury, described about six hundred plants from the Near East. For an excellent study of the importance of classical authorities in the fifteenth and sixteenth centuries, see Karen Meier Reeds, “Renais-sance Humanism and Botany.” Annals of Science 33 (1976), 5—19—42.
13. For a careful assessment of the attribution issues associated with this work, which is catalogued under Dörr’s name at the National Gallery of Art, see Koreny 1985, 206.
14. For an excellent analysis of these works, see Fritz Koreny, Albrecht Dürer and the Atomiil and Plant Studies of the Künstler (Boston, 1985).
watercolor drawings for this publication, see Koreny 1985, 218–231.

22. This point is made by Reeds 1976, 531.

23. Rather than listing and describing plants according to their medicinal or alimentary function, as had been done since antiquity, Fuchs classified plants in alphabetical order.

24. Meyers' drawings are preserved at the Österreichische Nationalbibliothek in Vienna.

28. Beyond extending the range of plants described and illustrated by Fuchs, Dodoens transformed the organization of his herbal. He supplanted the traditional alphabetical ordering, which had been made extremely cumbersome through the variety of names given to newly discovered plants, with a classification system based on plants' utilitarian characteristics. He grouped together flowers and fragrant herbs, roots and medicinal herbs, vegetables and thistles, roots and fruit, and trees and woody plants. See Antwerp 1993, 100–101, no. 27.

30. For a discussion of the inscriptions on some of these vases, see Segal in Münster 1996, 1, 120–121.

31. One such study, illustrated in Koreny 1985, 246, no. 90, includes the four large red field poppies in this painting as well as the soapwort, meadow buttercup, corn camomile, corn cockle, and snapdragon. For the identification of the flowers in this painting, see Münster 1996, 2, 649, no. 192.

32. Rembert Dodoens, Historiae plantarum, trans. C. Clusius (Antwerp, 1557); published by Jan van der Loz.

33. After the 1563 death of Jan van der Loz, the publisher of Cruyden boek, Dodoens began working with Christopher Plantin, with whom he planned a whole new botanical study, Stirpium Historiae Ampulsa Sex, which was eventually published in Antwerp in 1583. Flamm et Connumium Olsentramque is one of the smaller books that Dodoens published with Plantin in the interim, all of which were eventually incorporated into the larger publication. Stirpium Historiae Ampulsa Sex includes 558 illustrations, many of which depicted exotic flowers that were being introduced in increasing numbers to the Netherlands from distant lands.

34. Following in the tradition of Brunfels, Dodoens hired a specialist in botanical illustrations for this work, Peeter vander Borcht (1536/1450–1608), an artist from Dodoens' hometown of Mechelen who eventually designed and cut as many as three thousand woodcuts as botanical illustrations for Plantin. See C. Depauw in Antwerp 1993, 47.

35. Translated in Hulton 1977 for catalogue listings and discussion of their significance.

36. Four additional plates by an unknown follower of Hans Vredeman de Vries are appended to the copy of Hans Vredeman de Vries, Hortus Vivistorumam (Antwerp, 1583) located at Dumbarton Oaks, Washington. In this print of an elaborate garden design, figures splash each other from a fountain decorated with a statue of Venus. Another of these appended images depicts the garden as a setting for lovers at a feast, while two other garden designs are enlivened with biblical stories associated with illicit love: Susanna and the elders, and David and Bathsheba. The influential garden designs of Vredeman de Vries (1527–c. 1606) are all situated within a castle context, where walls and arbors divide geometrically conceived gardens into various subsections, each with its own distinctive character.

37. The expedition, led by Lieutenant René Goulaine de Laudonnière, was undertaken between 1564 and 1566. An account of the trip, illustrated with engravings after drawings by Le Moyne de Morgues, was published as part 2 of Theodore de Bry, Breve Narration Eorum Quae in Florida Americae Provincia Gallis Acebuntur (Frankfurt, 1591).

38. Paul Hulton, in The Work of Jacques Le Moyne de Morgues: A Huguenot Artist in France, Florida, and England (London, 1977), 1, 78–86, speculates that Le Moyne de Morgues may have been trained in a miniaturist workshop following in the tradition of Jean Bourdichon (1457–1521). Hulton, however, also notes that Le Moyne de Morgues' emphasis on the color and texture of flowers relates to the illuminated manuscript traditions that developed in Ghent and Bruges.

Van de Passe, who was born in Zeeland and raised as a Menonite, trained in Antwerp before moving to Utrecht in 1612. For information about his religious reasons. He then lived in Cologne before moving to Utrecht in 1618. For information about his early training, see I. J. M. Veldman, "Keulen als toevluchtsoord voor Nederlandse kunstenaars (1567–1613)," Oud Holland 107 (1993), 34–57.

It is divided into two parts, with the first part subdivided into four sections. The copies after La Clef des champs occur in the second part of Hortus Floridus, the so-called Altere Morgues had used as models for his work of Jacques de Gheyn II and their use as models in Rhetta Floris. See note 42.

Van de Passe, who was born in 1567-c. 1637. These manuscrafs are identical to Hoefnagel's. See note 42.

Although Hoefnagel became associated with the court of Rudolf II in 1590, he chose to live in Frankfurt, where he stayed from 1591 until 1594. He lived in Vienna from 1594 until his death in 1600.

Clusius was at that time preparing the Latin translation of Le Moyne de Morgues' French text for Theodor de Bry's publication Breviarium Bonus Neronis forum Ques in Florida Americae Provincia Gallis Accidit (Frankfurt, 1591). For a transcription and English translation of this text, see Hiltun 1977, 1, 87–152. It is also probable that Clusius owned watercolors Le Moyne de Morgues used as models for his florilegium, La Clef des champs (London, 1666). Since Clusius moved to Leiden in 1594, this hypothesis may account for their influence on the work of Jacques de Gheyn II and their use as models in Rhetta Floris. See note 42.

By Hendrick Hondius' 1599 engraving of a vase of flowers in a niche before a fanciful landscape. Hondius' print, which is illustrated in Sam Segal, Netherlandish Flower Painting of Four Centuries (Amstelveen, 1990), 49, fig. 27, is based on a design by the Delft artist Elias Verhulst.

Door verscheydenheyt is Nat- uere schoone, / Dat sietmen, als ten toone, / Teghen den sterrighen Hemelschen throne." Karel van Mander, De schilder-boeck voor schilders in den werelde (Amsterdam, 1654). The text was translated by Paul Taylor, Dutch Flower Painting 1600–1720 (New Haven and London, 1995), 86.

Aside from Jacob Hoefnagel's flower bouquet in Archetype (see fig. 24), see Hendrick Hondius' 1599 engraving of a vase of flowers in a niche before a fanciful landscape. Hondius' print, which is illustrated in Sam Segal, Netherlandish Flower Painting of Four Centuries (Amstelveen, 1990), 49, fig. 27, is based on a design by the Delft artist Elias Verhulst.
6. I would like to thank Sally Wages for stressing this point in discussions with me.

57. See Antwerp 1993, nos. 95 and 97.

58. See note 48.

60. See note 48.

62. Hopper in Fat and De Jong 1991, 37–37, attempts to identify the flowers depicted by De Gheyn with those listed in the 1594 and 1596 inventories of the Herren Mannin in Leiden. The connections to Clusius’ garden may be one reason that Emperor Rudolf II in Prague acquired this album for his extensive collection of nature studies.

63. The intriguing suggestion that De Gheyn was influenced by Jacques Le Moyne de Morgues was made by Beatris Breimink-Meijer-de Rooy, Roots of Seventeenth-Century Flower Painting: Miniatures, Plant Books, and Fruit (Leiden, 1996), 42–43. The insects in De Gheyn’s Paris album are particularly close to those made by Hoeftpecial in 1494 (see fig. 21).

64. Paris 1984, no. 9, fol. 18.

66. Another version of this work, also signed and dated 1603, is in the Centraal Museum, Utrecht, inv. no. 2. 316. It is discussed in Beden Savery in Beter Zei (1576–1639) [exh. cat., Wallraf-Richartz Museum and Centraal Museum] (Cologne and Utrecht, 1985–1986), 78–79, no. 2, ill.

67. A number of important collectors and art dealers lived in Middelburg, including Melchior Wynaigs, to whom Van Mander dedicated two of his treatises, Den Graf der oede my childe once and Het Leer der oede oerkijken lichten sehen. Wyntgis owned paintings by Bosschaert. See Bok in Amsterdam 1995–1994, 147–148.

68. See note 48.

69. For Lobelius, see Antwerp 1993, 121–123.

70. As Fred Meijer notes in Amsterdam 1993–1994, Bosschaert depicted identical roses in paintings from many periods of his career.

71. See note 48.

72. Writers associated butterflies, which only attain their beauty and freedom after their worldly confinement in cocoons, to the immortal souls of those who had lived a pious life. See Jacob Cats, Proteus ofte minne-beelden verandert in sinne-beelden (Rotterdam, 1627), emblem 31.

73. The inscription is written in French, a language often used at the court of the prince of Orange in The Hague. Although the author is not known, it must have been added shortly after Bosschaert’s death. Since the plaque was part of the original conception of the painting, it may be that this work...
was expressly commissioned by one of Bosschaert’s patrons to commemorate his fame. Bosschaert died in The Hague while delivering a painting to a member of the court; thus it is quite likely that Bosschaert painted this work as well for a member of the court. For the circumstances of his death, see Amsterdam 1993—1994, 307—303.

80. Sam Segal has counted thirteen butterflies in a painting by Van den Bergh dating 1617. See Amsterdam 1984, 76.

81. The Wan-li period extended from 1573 — 1619.

82. Among the other masters with whom Seghers worked were Thomas Willeboirts Bosschaert (1607/1608—1664), Hendrick van Balen, Erasmus Quellinus II (1607 — 1678), who painted illusionisti- cally rendered sculptural groups, and Peter Paul Rubens (1577—1640).

83. Although Bosschaert provided Van der Ast the model for depicting such symmetrically placed wicker baskets filled with flowers and fruit, the painting’s soft forms, diffuse contours, muted colors, and focused light reflect the influence of Savery on the young artist. For Bosschaert’s basket of flowers, see Ingoer Bergeron, “Baskets with Flowers by Ambrosius Bosschaert the Elder and Their Recurrences on the Art of Balthasar van der Ast,” Bulletin 6, no. 3 (1985—1986), 66, fig. 1. Van der Ast also learned from Bosschaert the art of making drawings or watercolor studies of flowers, fruits, and shells to use as models that could be variously combined. The elegant red-and-white variegated tulip that hangs over the edge of the basket in Basket of Flowers, for example, can be found in a number of his compositions. Bol 1960 has identified this tulip, known as a Summer Beauty, in at least nine other compositions.

85. As translated in Brenninkmeijer-de Rooij 1996, 49. Brenninkmeijer-de Rooij relates Brueghel’s depiction of the mouse to a comparable image, in reverse, that appears in Jacob Hoefnagel’s Archetypus (part 3, no. 2). Vignau-Wilberg 1994, 51, notes that the mousebush appear, in reverse, in part 1, no. 5. She suggests that Brueghel must have seen Joris’ painted pattern book.

86. Translated in Brenninkmeijer-de Rooij 1996, 49.

87. Brenninkmeijer-de Rooij 1996, 57, fig. 1. The painting is in the Pinacoteca Ambrosiana, Milan.

88. For an excellent assessment of the implications of Brueghel’s letter to Borromeo and his agent Bianchi, see Brenninkmeijer-de Rooij 1996, 47—90.

90. The book begins and ends with its famous refrain: “Vanity of vanities, saith the Preacher. all is vanity” (chapter 1, verse 2 and chapter 12, verse 8).

91. Illustrated in Arthur K. Wheelock Jr., “Still Life: Its Visual Appeal and Theoretical Status in the Seventeenth Century,” in Washington Jahrbuch der Bildenden Kunst, 3d series, 1980, 19, fig. 9. While I believe that the degree to which flower still-life paintings reflect various ideas has been greatly exaggerated in the literature, Brenninkmeijer-de Rooij 1996, 70 and 90, note 77, overstates the case when she argues that no evidence suggests that flower pieces were intended as symbols of ephemera. To support her opinion, she maintains that the poem incised on Brueghel’s still life was painted later. Brueghel, however, composed this still life with enough space below the ledge for a poem to be added.

92. Such images, which were often found in prints, might include a bouquet together with a skull and be accompanied by an inscription warning about the inevitability of death, such as MEMENTO MORI (Be mindful of death) or QVIS EVADIT / NEMO (Who escapes? No man). For QVIS EVADIT / NEMO, see Simon de Passe after Crispijn de Passe the Younger, Stillet, 1612, engraving, reproduced in Segal 1990, 154, no. 6. Segal translates the text accompanying De Passe’s engraving as “Behold, the vicissitudes of life and death are like the glory of a charming flower that remains unharmed for but a short time. It is thus that a child’s life moves on with faltering steps. No sooner is it born, than its fragile life has gone.” For QVIS EVADIT / NEMO, see Hendrick Goltzius, Yuan Man Hsing a Stall and a Tulip, 1614, pen drawing, Pierpont Morgan Library, New York, inv. no. 111, 145, reproduced in E.K.J. Reznicek, Die Zeichnungen von Hendrik Goltzus, 2 vols. (Utrecht, 1961), 532.

94. Freedberg 1981, 116. Brueghel’s painting, fig. 3 in Freedberg’s article, is in the Pinacoteca Ambrosiana, Milan.

95. See note 1.

96. Among the other masters whose Seghers worked were Thomas Willeboirts Bosschaert (1607/1608—1664), Hendrick van Balen, Erasmus Quellinus II (1607 — 1678), who painted illusionisti- cally rendered sculptural groups, and Peter Paul Rubens (1577—1640).

98. For an excellent overview of the relative values attached to flowers and flower still life, as well as an assessment of the tulip- mania, see Taylor 1995, 1—27.

99. Sam Segal, Tulips by Anthony Claus (Maastricht, 1987), indicates that about seven hundred tulips had been cultivated in The Netherlands at that time.
100. Jacob Marrel used this variant spelling of "naer het leven" in his Tulpenboek. The son of a Huguenot couple who settled in the Protestant sanctuary at Frankenthal, Marrel studied in Frankfurt with Georg Flegel (1566–1638) before moving to Utrecht in 1634. He lived in Utrecht until 1649, when he returned to Frankfurt. Aside from being a painter and draftsman, Marrel sold paintings and tulip bulbs.

101. For a fuller discussion of this book, see Tongiorgi Tomasi 1997, 284–288.

102. For Holsteyn's tulip drawings, see Tongiorgi Tomasi 1997, 82. In addition, two tulip drawings by Judith Leyster (1609–1660) are part of a tulip book in the Frans Halsmuseum, Haarlem.

105. For a discussion of Safieleven's twenty-seven botanical drawings for Agnes Block, see Wolfgang Schult, Herman Safieven 1609–1685: Leben und Weih (Berlin and New York, 1982), 95–101, 481–488.

106. Tongiorgi Tomasi 1997, 86, notes that a similar florilegium, dated 1668, is in the Biblioteca Nazionale Centrale in Rome.

110. This drawing is one of twelve gouache drawings of tulips and frillitas sold at Sotheby's, London, 15 March 1996, lots 101–106. The drawings were accompanied by a note indicating that the flowers were from the garden of Louis de Marle.

111. Johann van Goor, De Nieuwe schilderkunst der Nederlandsche kunstschilders en schilderessen (The Hague, 1750), 1, 248–256.

112. His teacher was his uncle, the Delft still-life painter Evert van Aelst (1602–1658), whose style appears to have had little impact on the artist.

113. Houbraken 1753, 2, 120.

114. The prime version of this composition, signed and dated 1656, is in the Gemäldegalerie Alte Meister, Kassel, inv. no. GK 905. The compositions are essentially identical, although the Kassel version has neither the mouse nor the dragonfly. The absence of the dragonfly indicates that Van Aelst did not originally intend for his painting to include the promise of salvation. In this respect, his composition is not as thematically integrated as De Heem's War of Flowers. For a discussion of the allegorical meaning of butterflies see note 77.

115. See note 92.

117. See note 92.

118. The bramble, which was believed to be the burning bush in which the angel of the Lord appeared to Moses, was associated with divine love that cannot be consumed.

119. The soap bubbles are a visual reference to hore hills, the idea that man's life is like a bubble. For a discussion of this theme in Dutch art and literature, see Eddy de Jongh et al., Tre Lezing en s'reemak: Werkomnus van Hilkolke genootswelk-

120. As has been discussed, roses had a number of religious associations, many of which were related to the Virgin. A white rose also symbolized Christ's love, and a red rose alluded to his Passion, a concept reinforced by the thorns lining its stem. See Amsterdam and 's-Hertogenbosch 1982, 5, 13.

122. As in Jan Davidsz. de Heem's War of Flowers, the dynamic composition is made even more immediate in the way that the orange peel, rose, butterfly, and fruit hang over the foreground plane. For the numerous Christological associations of fish, see James Hall, Dictionary of Subjects and Symbols in Art (New York, 1974), 122.
A close comparison, for example, is Willem van Aelst’s Flower Still Life with a Watch, Mauritshuis, The Hague, inv. no. 2. Illustrated in The Mauritshuis in The Hague, 1992), $4—55, example, is Willem van Aelst’s Van Shrieck, who had returned from Florence with Van Aelst in 1656. Verelst, who painted genre scenes. Simon became a member of Confrerie Pictura, the painters’ fraternity in The Hague, in 1663, but left for England in 1669, where he spent the rest of his life. He was extremely successful in England, where he worked for the second duke of Buckingham. Charles II owned six of his paintings. However, success seems to have gone to his head: he described himself as King of Painters and God of Flowers. He eventually went insane. Justus van Huysum, who also trained Jan’s brothers, Justus the Younger, Jacob, and Michiel, ran a flourishing art business. Justus not only painted large flower pieces, often as part of complete decorative schemes that he designed for patrons’ homes, he also was active as an art dealer. Van Huysum may have used such studies to provide general compositional designs for paintings that he then adapted to accommodate specific flowers he had in his possession. The composition of the 1723 drawing is similar, although not identical to Van Huysum’s Flowers in a Urn, c. 1620, National Gallery of Art, Washington. See Wheelock 1995, 142—145, ill. Samuel van Hoogstraten praised in his book of the flourishing art business. Justus not only painted large flower pieces, often as part of complete decorative schemes that he designed for patrons’ homes, he also was active as an art dealer.
CHECKLIST

PAINTINGS

1. Willem van Aelst  
Dutch, 1626–1683  
Vanitas Flower Still Life, c. 1656  
oil on canvas  
55.9 x 46.4 (22 x 18")  
North Carolina Museum of Art, Raleigh. Purchased with funds from the state of North Carolina

2. Balthasar van der Ast  
Dutch, 1593/1594–1657  
Basket of Flowers, c. 1622  
oil on panel  
17.8 x 22.5 (7 x 9")  
National Gallery of Art, Gift of Mrs. Paul Mellon

3. Balthasar van der Ast  
Dutch, 1593/1594–1657  
Basket of Fruit, c. 1622  
oil on panel  
18.1 x 22.8 (7 3/8 x 9")  
National Gallery of Art, Gift of Mrs. Paul Mellon

4. Balthasar van der Ast  
Dutch, 1593/1594–1657  
Bouquet on a Ledge with Landscape Vista, 1624  
oil on copper  
13.3 x 10.2 (5 1/4 x 4")  
The Henry H. Weldon Collection

5. Balthasar van der Ast  
Dutch, 1593/1594–1657  
Flowers in a Wan-lí Vase, c. 1625  
oil on panel  
36.3 x 27.7 (14 1/8 x 10 3/8")  
Private Collection

6. Balthasar van der Ast  
Dutch, 1593/1594–1657  
Still Life of Flowers, Belts, and Insects on a Stone Ledge, mid-1650s  
oil on panel  
23 x 34.5 (9 1/8 x 13 1/8")  
Pieter C.WM. Dreesmann

7. Christoffel van den Berghe  
Dutch, active 1617–1642  
Still Life with Flowers in a Vase, 1617  
oil on copper  
37.6 x 29.5 (14 1/2 x 11 3/8")  
Philadelphia Museum of Art, John G. Johnson Collection

8. Ambrosius Bosschaert the Elder  
Dutch, 1573–1621  
Still Life with Flowers, 1612–1614  
oil on copper  
23.2 x 18.1 (9 1/8 x 7 1/8")  
Teresa Heinz (and the late Senator John Heinz)

9. Ambrosius Bosschaert the Elder  
Dutch, 1573–1621  
Roses in an Arched Window, 1618–1619  
oil on copper  
27.5 x 23 (10 1/8 x 9 1/8")  
Private Collection, Holland

10. Ambrosius Bosschaert the Elder  
Dutch, 1573–1621  
View of Ruins in a Window, 1618–1619  
oil on copper  
28 x 35 (11 x 13 1/8")  
Private Collection, Boston

11. Ambrosius Bosschaert the Elder  
Dutch, 1573–1621  
Bouquet of Flowers in a Glass Vase, 1621  
oil on copper  
31.6 x 21.6 (12 1/4 x 8 1/2")  
National Gallery of Art, Patron's Permanent Fund and New Century Fund

12. Jan Brueghel the Elder  
Flemish, 1568–1625  
A Basket of Mixed Flowers and a Vase of Flowers, 1645  
oil on panel  
54.9 x 89.9 (21 3/4 x 35 3/8")  
National Gallery of Art, Gift of Mrs. Paul Mellon, in honor of the 50th anniversary of the National Gallery of Art

13. Jan Brueghel the Elder  
Flemish, 1568–1625  
Flowers in a Glass Vase, c. 1608  
oil on panel  
42.9 x 33.7 (16 1/4 x 13 1/8")  
Private Collection

14. Jacques de Gheyn II  
Dutch, 1565–1639  
Still Life with Flowers, c. 1602/1604  
oil on copper  
diameter: 17.8 (7")  
Teresa Heinz (and the late Senator John Heinz)

DETAIL: Jan van Huysum, Still Life of Flowers and Fruit in a Niche (cat. 18)
15 Cornell de Heem
Dutch, 1631-1696
Still Life of Fruit and Flowers with a Roemer, mid-1660s
oil on canvas
49.5 x 41.9 (19 1/2 x 16 1/2)
Private Collection, Washington

Jan van Huysum  
Dutch, 1682–1749  
Bouquet of Flowers, c. 1720  
black chalk and gray wash on paper  
35.6 x 27.9 (14 x 11)  
Private Collection, Washington

35  
Jan van Huysum  
Dutch, 1682–1749  
Bouquet of Flowers, 1723  
black chalk and gray wash on paper  
38.1 x 29.2 (14 3/4 x 11 1/4)  
Private Collection, Washington

36  
Jacob Marrel  
German, 1614–1681  
Admiral d’Hollande from Tulpenboek, 1642  
bodycolor on paper  
31.4 x 20.3 (12 1/4 x 8)  
Collection of Mrs. Paul Mellon, Upperville, Virginia

37  
Jacob Marrel  
German, 1614–1681  
Geel en Root van Leven from Tulpenboek, 1642  
bodycolor on paper  
31.4 x 20.3 (12 1/4 x 8)  
Collection of Mrs. Paul Mellon, Upperville, Virginia

38  
Jacob Marrel  
German, 1614–1681  
General De Mat from Tulpenboek, 1642  
bodycolor on paper  
31.4 x 20.3 (12 1/4 x 8)  
Collection of Mrs. Paul Mellon, Upperville, Virginia

39  
Jacob Marrel  
German, 1614–1681  
Le Grand Incarnadin from Tulpenboek, 1642  
bodycolor on paper  
31.4 x 20.3 (12 1/4 x 8)  
Collection of Mrs. Paul Mellon, Upperville, Virginia

40  
Jacob Marrel  
German, 1614–1681  
Title Page from Tulpenboek, 1642  
bodycolor on paper  
31.4 x 20.3 (12 1/4 x 8)  
Collection of Mrs. Paul Mellon, Upperville, Virginia

41  
Herman Saftleven  
Dutch, 1609–1685  
A Mullein Pink, 1680  
bodycolor on paper  
20 x 15.7 (7 7/8 x 6 1/4)  
Abrams Collection, Boston

42  
Peter Worhous  
Dutch, 1654–1693  
Fritillaria meleagris, 1683  
gouache on paper  
32.1 x 20.5 (12 1/2 x 8 1/4)  
Abrams Collection, Boston

43  
Anonymous Flemish, c. 1500  
The Annunciation from Book of Hours (Whehg Hours)  
illuminaton on vellum  
open: 11.4 x 19.1 (4 1/2 x 7 1/2)  
Library of Congress, Rare Book and Special Collections Division

44  (not in exhibition)  
Julius Francois de Geerst  
Dutch, c. 1639–1699  
Fritillaria, Johnny-Jump-Up, and Vinca from Jardin de Sirr et curieux Jlen, mid-1660s  
bodycolor on vellum  
open: 30.5 x 45.1 (12 x 17 1/2)  
Collection of Mrs. Paul Mellon, Upperville, Virginia

45  
Joris Hoefnagel  
Flemish, 1542–1600  
Iris from Animalis rationalis et insector, (Ibiss), c. 1575/1580  
watercolor and gouache on vellum  
open: 15.4 x 40.2 (5 7/8 x 15 1/4)  
National Gallery of Art, Gift of Mrs. Lessing J. Rosenwald

46  
Jacques Le Moyne de Morgues  
French, c. 1533–1588  
Damask Rose and a Purple-and-Blue Wild Penny (Heartsease) from a manuscript of 16 miniatures of flowers and insects, probably 1573/1576  
watercolor and bodycolor on gold ground on vellum  
open: 11.4 x 15.2 (4 1/2 x 6)  
Dumbarton Oaks, Washington, Trustees for Harvard University

47  
Jan Withoos  
Dutch, 1648–c. 1685  
Johnny-Jump-Up (Viola tricolor) from A Collection of Flowers, c. 1670  
bodycolor on vellum  
open: 41.6 x 57.2 (16 1/2 x 22 1/2)  
Collection of Mrs. Paul Mellon, Upperville, Virginia

48  
Jan Withoos  
Dutch, 1648–c. 1685  
Morning Glory from A Collection of Flowers, c. 1670  
bodycolor on vellum  
open: 41.6 x 58.7 (16 1/2 x 23 1/2)  
Collection of Mrs. Paul Mellon, Upperville, Virginia
